Coverage without limits

Capitalising upon the CDMA450 Opportunity

CDMA450 is the most widespread and established technology providing mobile and fixed communication services in low frequency band.

Agenda

History of 450

450 in the standards

CDMA450

A cost-effective solution to provide inexpensive and advanced telecommunication services to the users

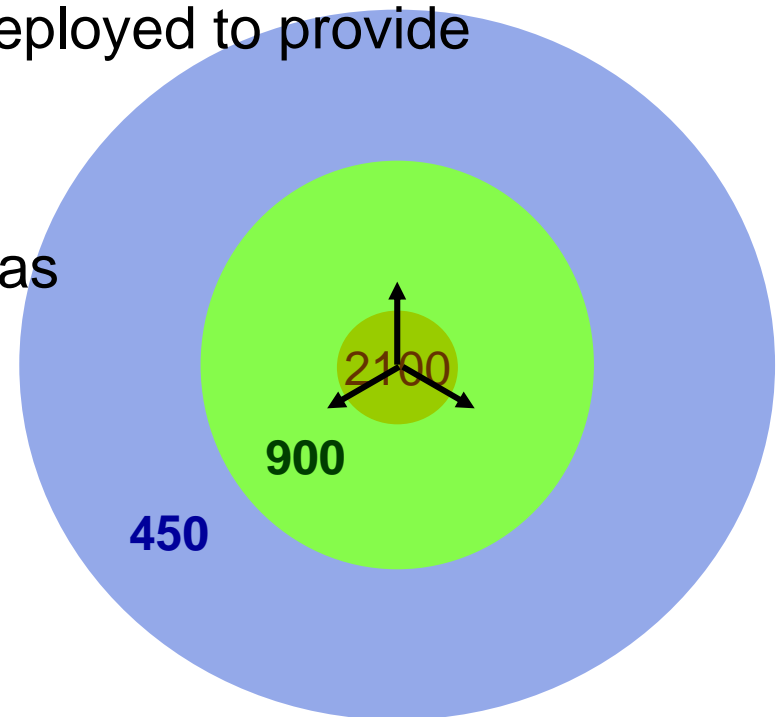

450 history

- CDMA450 – one of three technologies initially submitted to the NMT MoU as candidate for upgrade of NMT450 networks;
- In October 1999 Plenary of NMT MoU accepted CDMA450 as one of technologies for migration;
- IS2000 is a part of Recommendation ITU-R M.1457 – one of the IMT2000 radio interfaces – IMT2000 CDMA Multi-Carrier - IMT MC (1998)
- Band Class 5 included in IS2000 to cover frequency arrangements in 450 MHz (1999)
- ITU WRC-07 has identified band 450-470 for IMT on the global basis (November 2007)

450 MHz band

- Great propagation characteristics of the band
- Bigger cells
- Less base stations required to be deployed to provide coverage
- Faster deployment
- Cost-effective coverage of wide areas

CDMA450 technology

It is cdma2000/1xEVDO in the 450MHz

High quality voice (even with background noise)

Soft handoff

High confidentiality

High speed packet data at 50-80 kbps average and 153,6 kbps peak data rates per user / EVDO 300-600 kbps average and 2,4 Mbps peak data rates per user

High spectrum efficiency

Low radiating power by user terminal (max. 200 mWatt)

Band Class 5

3GPP2 C.S0002. Band Class 5 Block Frequency Correspondence and Band Subclasses

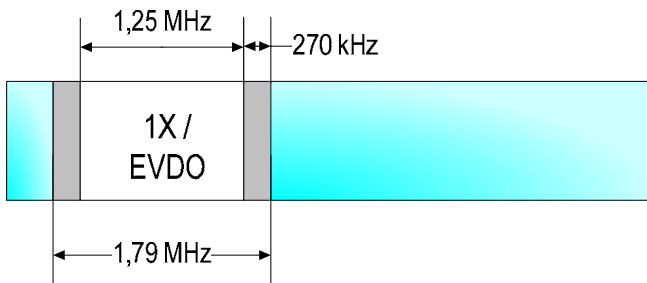

Block Designator	Band Subclass	Transmit Frequency Band (MHz)	
		Mobile Station	Base Station
A	0	452.500–457.475	462.500–467.475
B	1	452.000–456.475	462.000–466.475
C	2	450.000–454.800	460.000–464.800
D	3	411.675–415.850	421.675–425.850
E	4	415.500–419.975	425.500–429.975
F	5	479.000–483.480	489.000–493.480
G	6	455.230–459.990	465.230–469.990
H	7	451.310–455.730	461.310–465.730

The use of block A is preferable :

most of the existing networks and subscriber terminals are using it

450 MHz suggested spectrum arrangements

Coordinated use

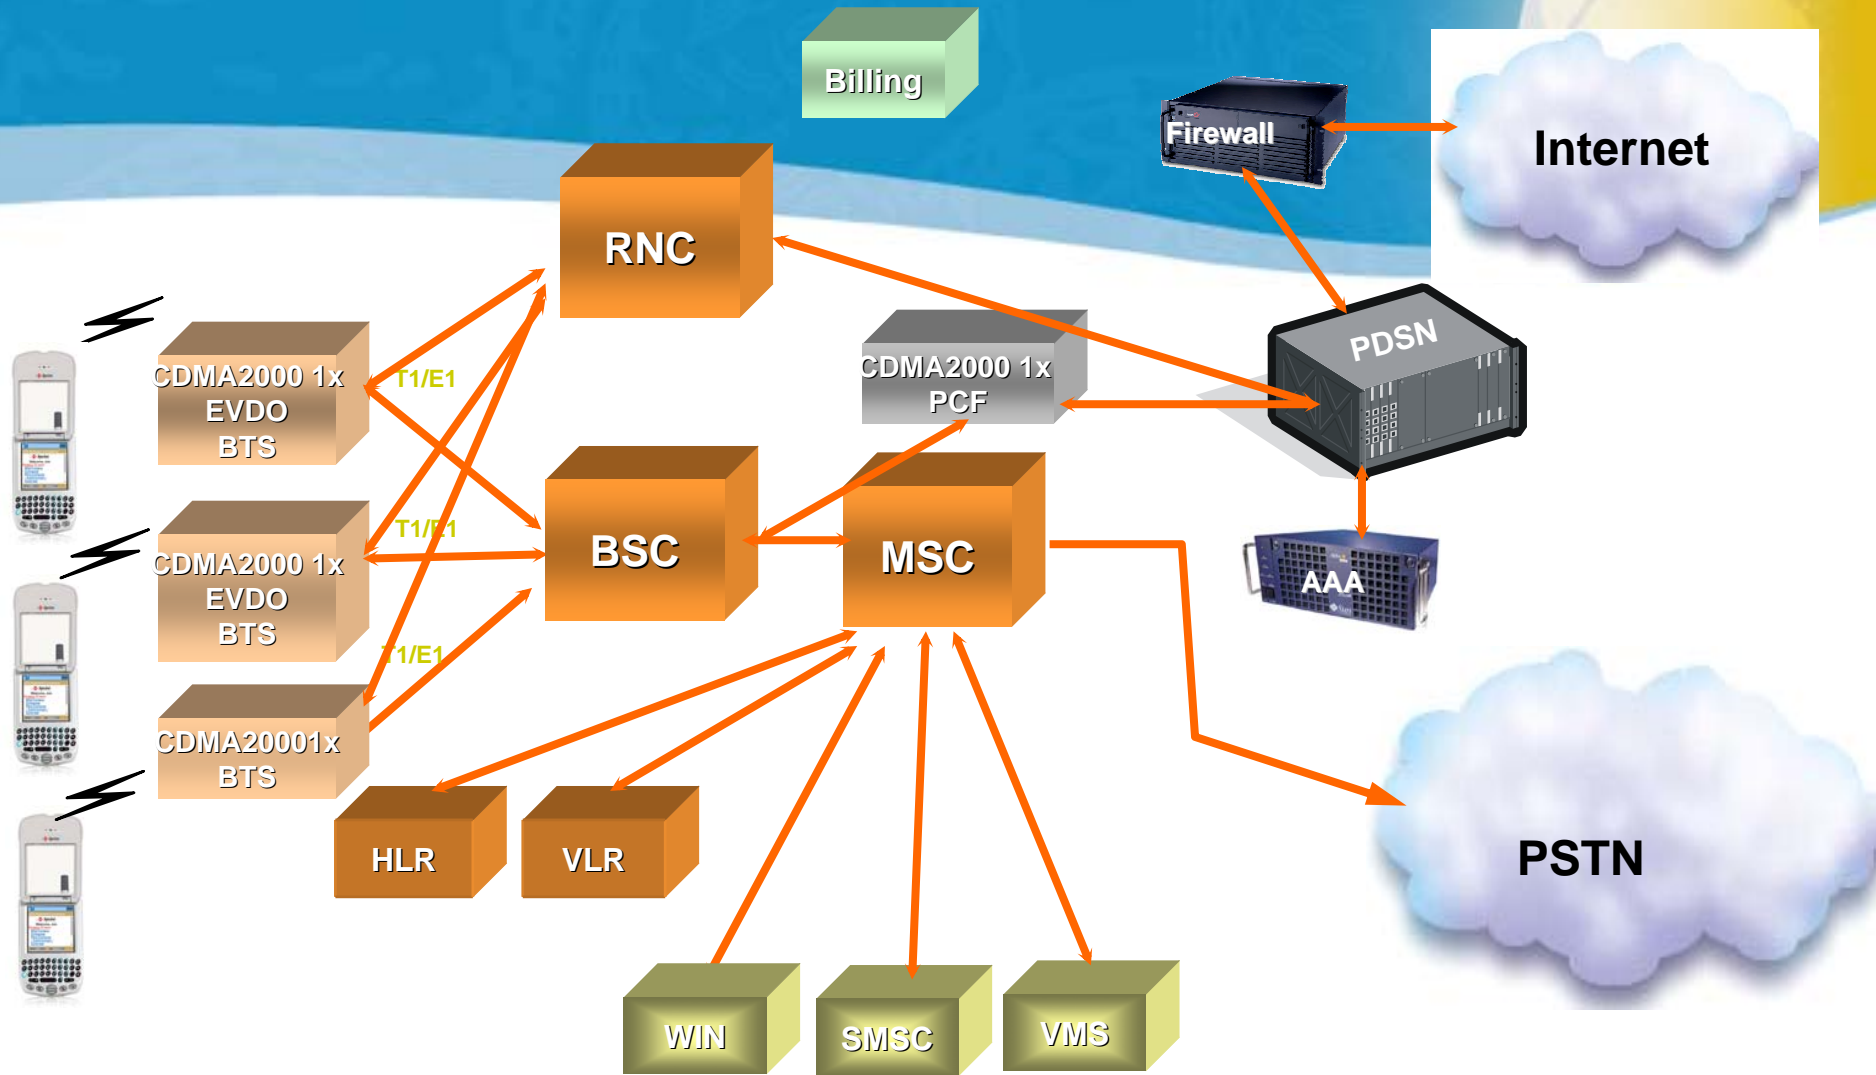

463,0 463,975 465,225 466,475 467,5 frequency, MHz

Uncoordinated use

463,0 463,975 465,225 466,475 467,5 frequency, MHz

Services

Voice services

- call forwarding
- call waiting
- CLIP/CLIR
- voicemail
- conference call
- ...

Other:

- SMS
- MMS
- Surveillance
- Location Based Services
- Closed user group
- Push-to-Talk
- Voice and packet data roaming
- GSM roaming

High speed packet data services

- Internet access
- VPN
- email
- Mobile portal
- Mobile content providers services
- Videostreaming services

CDMA450 Statistics

31 countries have commercially launched to date

Commercial networks	48
Commercial EV-DO networks	14
Planned launches 1X and DO	43
Total commercial and planned CDMA450 networks	90+
Estimated active CDMA450 subscribers worldwide	14M+

Latin America CDMA450

More than just a digital migration from NMT450

CDMA450 offers significant coverage advantage over systems operating at higher frequencies

- Significantly fewer base stations
- Rapid network deployment
- Reduced environmental impact
- Significantly reduced capex and opex

CDMA450 Business Opportunities

- Profitable business niche market (SOHO, SME)
- Rural connectivity and universal service
- Remote areas, small communities and areas with low-density population
- Affordable wireless broadband access
- Public safety services
- Ability for fixed line Operators to expand their coverage into rural areas

Market Growth and Operator needs in WLL

- Lower device costs
- Operator/vendor co-marketing
- Migration to mobility & data
- Common test standards
- Technical forum for Operators to share network test results

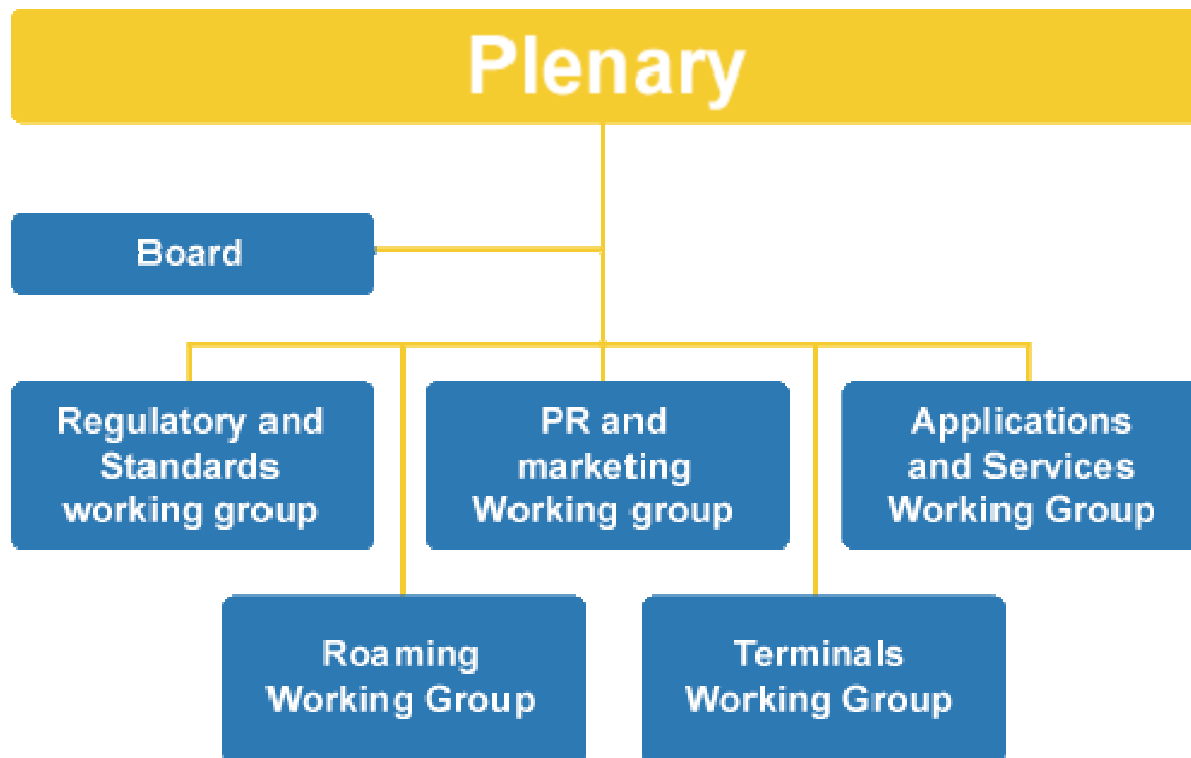

IA 450 Mission Statement

- Support the members in developing their wireless business in the 450 MHz band
- Promote the use of 450 MHz band for CDMA450 on global basis

IA450 Member benefits

- Provides guidance and support to Operators interested in deploying CDMA450 technology
- Supports members in approaching National Authorities about the use of 450Mhz band for CDMA450
- Market the use of 450Mhz band for CDMA450
- Standardisation of device specifications & volume aggregation initiatives
- Provide a technical forum for CDMA450 Operators to share information and experience

CDMA450 = 3G

CDMA450 is in the standard ITU-R M.1457

WRC-07 has identified the band 450-470 MHz for IMT on global basis
