

## RESOLUTION ITU-R 71-1

### **Role of the Radiocommunication Sector in the ongoing development of television, sound and multimedia broadcasting**

(2019-2023)

The ITU Radiocommunication Assembly,

*considering*

- a) that the scope of ITU as a whole, and of the standardization activities within ITU in particular, is very important to the evolving broadcasting industry;
- b) that enhancements to the broadcasting systems have been and will be pursued;
- c) that the implementation of broadcasting systems is expanding and that these systems are being continuously developed in line with user and technology trends;
- d) that the deployment of broadcasting systems on a global basis continues to be developed through a collaborative effort among the three ITU Sectors,

*noting*

- a) that ITU recognized in 2012 through its efforts to implement the outcomes of WSIS:
  - development of road maps for the transition from analogue to digital broadcasting,
  - updated guidelines on digital broadcasting, and
  - training programmes for the transition from analogue to digital broadcasting;
- b) Resolution ITU-R 9, on liaison and collaboration with other recognized external organizations,

*recognizing*

that Resolution ITU-R 70, on principles for the future development of broadcasting, encourages the development of Recommendations and Reports for the introduction of new systems, technologies and applications for broadcasting,

*resolves*

- 1 that a roadmap for ITU-R activities for broadcasting should be developed by the relevant Radiocommunication Study Group to ensure that this work is progressed effectively and efficiently with other ITU-R Study Groups, ITU-T and ITU-D as well as organizations external to ITU;
- 2 that taking into account the established processes for intersector coordination activities between ITU-R and ITU-D concerning broadcasting, these activities should be continued and enhanced;

3 that taking into account the established processes for intersector coordination activities between ITU-R and ITU-T concerning audio visual quality assessment and accessibility, audio and video coding, integrated broadcast-broadband, multimedia, and other emerging technologies and applications, these activities should be continued and enhanced,

*instructs the Director of the Radiocommunication Bureau*

to report to future radiocommunication assemblies on the results of implementing this Resolution.
