

Title: Bizerte from Punic Counter to Digital Port

Abstract:

"Bizerte Smart City", a dream of creating a digital port unique of its kind worldwide, by implementing a "Free Digital" zone with several levels of security through the establishment of a "NEUTRAL" digital territory. Where large organizations and global companies can safely safeguard their data with an international protocol that preserves one another's interests and national sovereignty by creating a kind of "DIGITAL VATICAN" which constitutes in itself a neutral digital territory. This approach will enable us to create an intercontinental digital node and to develop an ecosystem specialized in data processing and in artificial intelligence and advanced digital technologies serving these facilities that will become an international destination. This vision will allow us to promote our country, which will eventually become the cradle of "Data": The oil of tomorrow.
