

Machine Learning for Urban Pollution Monitoring Ihsane Gryech

AI for Good Global Summit. May 29,2019

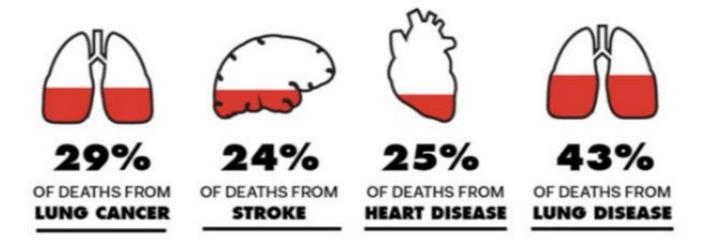

MoreAir

Why monitoring matters?

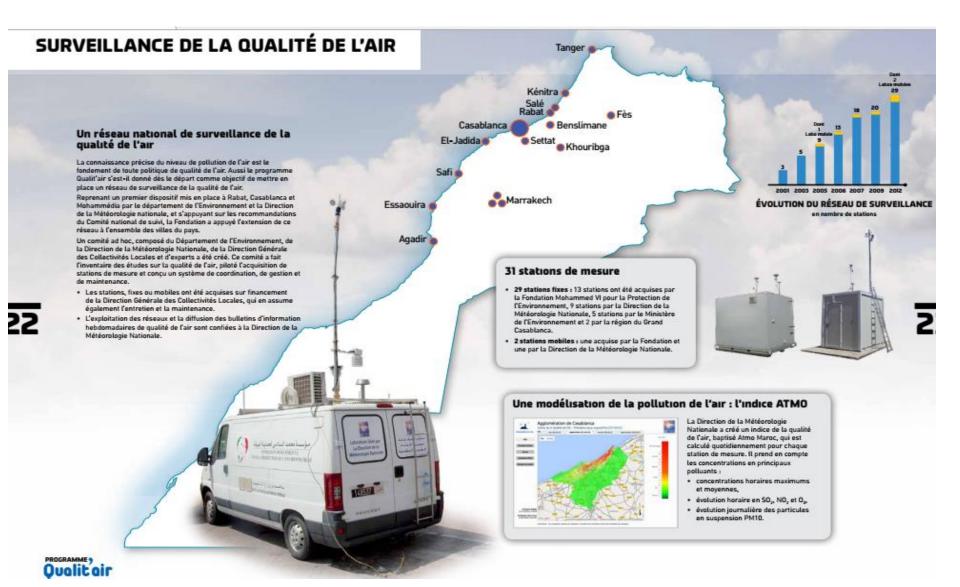

- 7 Million people per year,6 M of them are only children under 15!
- Dirty air leads to the premature deaths of 712,000 Africans each year, more than the toll of unsafe water, malnutrition and unsafe sanitation.

Air Quality Monitoring

MoreAir's Strategy

- Deployement strategy based on a medical survey.
- Low cost sensors (Mobile and Nomadic Sensors)
- Covering a large area
- Taking into account every studied area and the various activities and characteristics related to it.

Medical Survey

420 Patients

Indoor

• Mites in bedding: 0.0007475

Kitchen's aeration: 0.03931

Mattress type: 0.0217

Heating: 0.05314

Patient's medical background

- Ashtma or allergy in a family member: 0.04586
- Gastroesophageal reflux: 0.001217
 - Food allergies: 0.06261
 - Neonatal distress: 0.03847
 - Allergy to pollen: 0.001455

Outdoor

- Crowded neighborhood: 0.02048
- Exposure to road traffic: 0.0157
- Fluff & animal hair: 0.06458
- Weather changes: 0.0238
- Season: 0.0002312

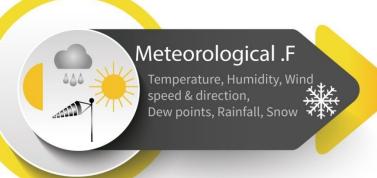

Psychological & Infectious triggers

- Breathing difficulty under physical effort: 5.759e-07
- Respiratory infection prior to admission: 0.001532
- Intense emotions: 0.01791
- Stress: 0.00184
- Flu: 0.01878

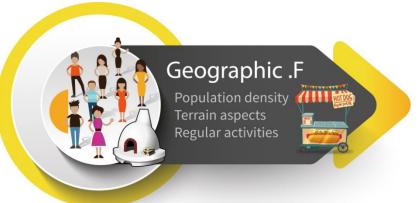

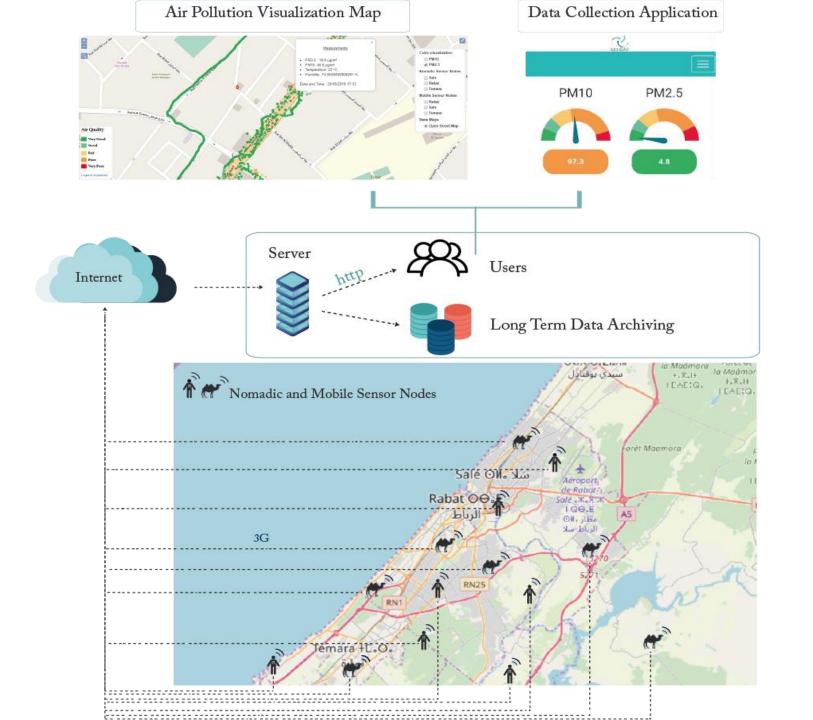

Features inspection

IOT

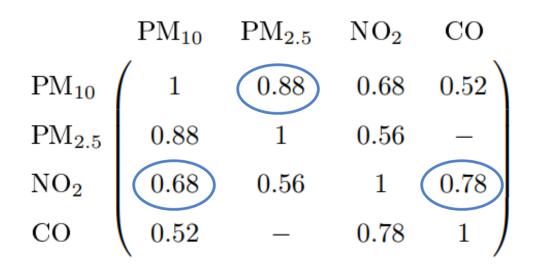

Artificial Intelligence

Correlation Matrix of pollutants

This may be used to infer the concentrations of some pollutants using those of other pollutants, thereby reducing the number of air pollution sensors.

SVM – Including Pollutants

FeaturesY	NO_2	PM_{10}	$PM_{2.5}$
F_t	0.16	0.17	0.07
F_m	0.59	0.62	0.71
$F_t + F_m$	0.64	0.67	0.74
$F_t + F_p$	0.80	0.91	0.89
$F_m + F_p$	0.87	0.92	0.94
$\boxed{F_t {+} F_m {+} F_p}$	0.88	0.94	0.95
