

A National Approach to Cybersecurity

ITU Regional Cybersecurity Forum for Europe and CIS
Sofia, Bulgaria
7-9 October 2008

Joseph Richardson

<u>Joseph.Richardson@ties.itu.int</u>

for

ICT Applications and Cybersecurity Division Policies and Strategies Department, ITU-D

This Presentation

- Introduces the National Approach to Cybersecurity
- Identifies Issues for Implementing the National Approach
- Introduces the ITU National Cybersecurity/CIIP Self-Assessment Tool

October 2008 2

National Approach

Based on ongoing work at ITU: including, Study Group Q 22/1: Report on Best Practices for National Approach to Cybersecurity: A Management Framework for Organizing National

Cybersecurity Efforts

Why is a National Approach Needed?

- Cybersecurity and Critical Information Infrastructure Protection (CIIP) is a SHARED responsibility
- All "participants" must be involved
 - >Appropriate to their roles

October 2008 4

Participants

- "Participants" responsible for cybersecurity:
 - ➤ "Government, business, other organizations, and individual users who develop, own, provide, manage, service and use information systems and networks"
 - From "UNGA Resolution 57/239 Creation of a global culture of cybersecurity"

October 2008 5

Elements of National Approach

October 2008

Action Requirements

For each of these five elements:

- >POLICY: to guide national efforts
- ➤ GOALS: to implement the policy
- >SPECIFIC STEPS: to achieve goals

Framework for National Cybersecurit Efforts	

National Strategy

Government-Industry Collaboration

Deterring Cybercrime

Incident Management Capabilities

Culture of Cybersecurity

Policies

Developing and implementing a national cybersecurity plan requires a comprehensive strategy that includes an initial broad review of the adequacy of current national practices and consideration of the role of all stakeholders (government authorities, industry, and citizens) in the process. Protecting critical information infrastructure and cyberspace is a shared responsibility that can best be accomplished through collaboration between government at all levels and the private sector, which owns and operates much of the infrastructure. It is important to recognize that although the world's information security systems have largely become an interoperable and interconnected whole, the structure of this network can vary greatly from country to country. Therefore, an effective and sustainable system of security will be enhanced by collaboration among owners and operators of these systems.

Cybersecurity can be greatly improved through the establishment and modernization of criminal law, procedures, and policy to prevent, deter, respond to, and prosecute cybercrime.

It is important to maintain a national organization to serve as a focal point for securing cyberspace and the protection of critical information infrastructure, whose national mission includes watch, warning, response and recovery efforts and the facilitation of collaboration between government entities, industry, academia, and the international community.

Considering that personal computers are becoming ever more powerful, that technologies are converging, that the use of ICTs is becoming more and more widespread, and that connections across national borders are increasing, all participants who develop, own, provide, manage, service and use information networks must understand cybersecurity issues and take action appropriate to their roles to protect networks. Government must take a leadership role in bringing about this Culture of Cybersecurity and in supporting the efforts of other participants.

Goals

I.A.1. Create awareness at a national policy level about cybersecurity issues and the need for national action and international cooperation.

I.A.2. Develop a national strategy to enhance cybersecurity to reduce the risks and effects of both cyber and physical disruptions.
I.A.3. Participate in international efforts to promote national prevention of, preparation for, response to, and recovery from incidents.

II.A.1. Develop government-industry collaborative relationships that work to effectively manage cyber risk and to protect cyberspace.

II.A.2. Provide a mechanism for bringing a variety of perspectives, equities, and knowledge together to reach consensus and move forward together to enhance security at a national level. III.A.1. Enact and enforce a comprehensive set of laws relating to cybersecurity and cybercrime consistent with the provisions of the Convention on Cybercrime (2001). IV.A.1. Develop a coordinated national cyberspace security response system to prevent, detect, deter, respond to, and recover from cyber incidents.

IV.A.2. Establish a focal point for managing cyber incidents that bring together critical ments from government (including law enforcement) and essential elements from infrastructure operators and vendors to reduce both the risk and severity of incidents.

IV.A.3. Participate in watch, warning, and incident response information sharing mechanisms. IV.A.4. Develop, test, and exercise emergency response plans, procedures, and protocols to ensure that government and non-government collaborators can build trust and coordinate effectively in a crisis. V.A.1. Promote a national Culture of Security consistent with UNGA Resolutions 57/239, Creation of a global culture of cybersecurity, and 58/199, Creation of a global culture of cybersecurity and the protection of critical information infrastructures.

I.B.1. Persuade national leaders in the government of the need for national action to address threats to and vulnerabilities of the national cyber infrastructure through policylevel discussions.

I.B.2. Identify a lead person and institution for the overall national effort; determine where within the government a Computer Security Incident Response Team with national responsibility should be established; and identify lead institutions for each aspect of the national strategy.

I.B.3. Identify the appropriate experts and policymakers within government ministries, government, and private sector, and their roles.

I.B.4. Identify cooperative arrangements for and among all participants.

I.B.5. Establish mechanisms for cooperation among government and private sector enti-

I.B.6. Identify international expert counterparts and foster international efforts to address cybersecurity issues, including information sharing and assistance efforts.

I.B.7. Establish an integrated risk management process for identifying and prioritizing protective efforts regarding cybersecurity. I.B.8. Assess and periodically reassess the current state of cybersecurity efforts and develop program priorities. I.B.9. Identify training requirements and how

to achieve them.

II.B.1. Include industry perspectives in the earliest stages of development and implementation of security policy and related efforts.

II.B.2. Encourage development of private sector groups from different critical infrastructure industries to address common security interests collaboratively with government.

II.B.3. Bring private sector groups and government together in trusted forums to address common cybersecurity challenges. II.B.4. Encourage cooperation among groups from interdependent industries. II.B.5. Establish cooperative arrangements between government and the private sector for incident management.

III.B.1. Assess the current legal authorities for adequacy. A country should review its criminal code to determine if it is adequate to address current (and future) problems. III.B.2. Draft and adopt substantive, procedural and mutual assistance laws and policies to address computer-related crime. III.B.3. Establish or identify national cybercrime units.

III.B.4. Develop cooperative relationships with other elements of the national cyberse-curity infrastructure and the private sector. III.B.5. Develop an understanding among prosecutors, judges, and legislators of cyber-crime issues.

III.B.6. Participate in the 24/7 Cybercrime Point of Contact Network.

IV.B.1. Identify or establish a national CSIRT (N-CSIRT) capability.

IV.B.2. Establish mechanism(s) within government for coordination among civilian and government agencies.

IV.B.3. Establish collaborative relationships with industry to prepare for, detect, respond to, and recover from national cyber incidents. IV.B.4. Establish point(s) of contact within government agencies, industry and international partners to facilitate consultation, cooperation, and information exchange with the N-CSIRT.

IV.B.5. Participate in international cooperative and information sharing activities. IV.B.6. Develop tools and procedures for the protection of the cyber resources of government entities.

IV.B.7. Develop a capability through the N-CSIRT for coordination of governmental operations to respond to and recover from large-scale cyber attacks.

IV.B.8. Promote responsible disclosure practices to protect operations and the integrity of the cyber infrastructure.

V.B.1. Implement a cybersecurity plan for government-operated systems.

V.B.2. Implement security awareness programs and initiatives for users of systems and networks.

V.B.3. Encourage the development of a culture of security in business enterprises. V.B.4. Support outreach to civil society with special attention to the needs of children and individual users.

V.B.5. Promote a comprehensive national awareness program so that all participants-businesses, the general workforce, and the general population—secure their own parts of cyberspace.

V.B.6. Enhance Science and Technology (S&T) and Research and Development (R&D) activities.

V.B.7. Review existing privacy regime and update it to the online environment.
V.B.8. Develop awareness of cyber risks and

V.B.8. Develop awareness of cybe available solutions.

Steps

Implementing the National Approach

- Actions required of Government
- Collaboration among participants

9

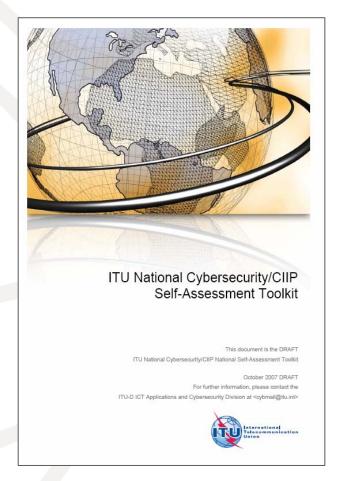

Actions for Government

- Provide leadership, guidance and coordination
 - > Identify lead persons and institutions
 - Develop CSIRT with national responsibility
 - Identify cooperative arrangements and mechanisms among all participants
 - Identify international counterparts and relationships
 - > Identify experts
 - Establish integrated risk management process
 - > Assess and periodically reassess cybersecurity
 - Identify training requirements

10

ITU National Cybersecurity/CIIP Self-Assessment Tool

Intended to assist national authorities review their domestic situation in context of policies, goals and actions identified in National Approach

National Cybersecurity/CIIP Self-Assessment

- Focused at national management and policy level
- Intended to assist national governments:
 - > Understand existing national approach
 - Develop "baseline" report on best practices
 - > Identify areas for attention
 - > Prioritize national efforts

Considerations for Using Self-Assessment

- No nation starting at ZERO
- No "right" answer or approach
- Continual review and revision needed
- All "participants" must be involved
 - >appropriate to their roles

... 13

The Self-Assessment

- Examines each Element at management and policy level:
 - ➤ National Strategy
 - > Public-Private Sector Collaboration
 - ➤ Deterring Cybercrime
 - National Incident Management Capabilities
 - ➤ Culture of Cybersecurity

... 14

The Self-Assessment

- Looks at organizational issues for each **Element**:
 - >The people
 - >The institutions
 - >The relationships
 - >The policies
 - >The procedures
 - >The budget and resources

The Self-Assessment

- Identifies issues and poses questions:
 - >What Actions have been taken?
 - > What Actions are planned?
 - >What Actions are to be considered?
 - >What is the Status of these actions?

The National Approach and Self-Assessment Tool

- Objective: assist nations organize and manage national efforts to
 - **Prevent**
 - >Prepare for
 - >Protect against
 - > Respond to, and
 - > Recover from cybersecurity incidents.

..... 17

National Approach to Cybersecurity

- What are the next steps
 - ➤ for your nation?
 - >for your region?

.... 10
