

Abstract for the following talk:

Dave Sidor

ITU-T Overview of NGN Management

This presentation will discuss the principles, architecture, requirements, information models, and protocols to support the communication of NGN management information across interfaces between NGN elements and NGN-related management systems and also interfaces between NGN-related management systems. For this purpose, activities currently underway in SG 4, the SG 4-sponsored NGN Management Focus Group, and partner organizations will be summarized.
