

## Presentation 15 : WiMAX Forum – Technical Working Group Status Update

Now at over 300 members representing the world's leading BWA service providers and equipment manufacturers, the WiMAX Forum has working groups established to address the end-to-end challenges of deploying cost effective, interoperable, standards-based BWA deployments. These groups include ones focused on certification of equipment, the layer 3+ network specification, layer 7 applications and of course, the radio interface (layers 1 and 2.) The speaker will provide a status update of these working group activities.
