

Wireless Broadband for Rural Communication - EV-DO 450M

Speaker TBD

Abstract: Rural wireless broadband needs an economical, well-proven technology of quick-deployment. The technology of EV-DO 450M boasts its wide coverage, high data rate, mature industry chain and mass application, etc. After severe tests in Argentina, CITEC considers it the best choice to solve the problem of universal data service. From the application of CDMA EV-DO, we see that the technology can easily bridge the rural digital divide.
