

ITU/BDT Regional on Broadband Wireless Access (BWA) for rural and remote areas for  
Africa  
Yaoundé (Cameroon)  
18-21 Sept. 2006

**Session /: Fixed Mobile Convergence  
Mobile Next Generation Networks**

**Mobile Next Generation Service Offerings and Concepts  
Bosco Eduardo Fernandes  
Chair UMTSF Working Group**

The debate on Convergence and Next Generation Networks started a few years ago. Whereas, usually the first expectation is a new Network, in other words new technology for the complete new Infrastructure; one begins to see more innovative improvements in today's investments to meet the requirements of the future. This goes per say that "Services" are what people are looking for and not the under aligning technology. The presentation will address the short, mid term and long terms expectations of graceful smooth transitions to meeting the band width and efficiency of the services of tomorrow. It will illustrate the access technologies that exist and how they will they will be integrated into current networks as well has where will it all go in the future.
