#2: Topic Area: CDMA2000 1X and EV-DO

Title: Industry Overview of the CDMA2000 Evolution Path

Abstract:

The presentation will discuss the business and technical considerations for using CDMA2000 1X and 1xEV-DO for both fixed and mobile services. An overview of the CDMA2000 evolution path will be presented, with a specific focus on EV-DO Rev A (and its support of VoIP) and Rev C (and its support of ultra mobile broadband services). A global update on the adoption of CDMA2000 1X and EV-DO will also be presented, examining the advantages of these technologies within the lower frequency bands, a discussion on device availability, and those applications that are popular and profitable.

The presentation will also explore how CDMA2000 compares to other wireless technologies that are being promoted, such as UMTS and WiMax.
