

ABSTRACT

ITU-R Standardization activities

This presentation addresses the standardization activities within the ITU-R. It describes the objectives, structure and scope of the ITU-R Study Groups, the Radiocommunication Assembly, the current key areas of standardization in ITU-R and the ITU-R Recommendations, Reports and Handbooks. It presents the main activities on each of the ITU-R Study Groups, showing the key areas of standardization, e.g. broadband wireless access (terrestrial and satellite), IMT - International Mobile Telecommunications, broadcasting technologies, emergency communications and environmental monitoring.
