

ABSTRACT

International & National Spectrum Management Frameworks

This presentation addresses firstly the international spectrum management framework through the ITU Radiocommunication Sector (ITU-R) mission, role, activities and instruments. It then describes the ITU-R Standardization activities in respect of the national spectrum management and the related key areas, activities and documents. In a third part, it addresses some new challenges in terms of Spectrum Management which are also some of the topics on the agenda of the upcoming World Radiocommunication Conference (WRC).
