

**ITU-R Standardization activities
(Alexandre VASSILIEV)**

The presentation addresses the standardization activities within the ITU Radiocommunication Sector (ITU-R). It describes the structure of mandatory (such as Radio Regulations) and voluntary standards, objectives, structure and scope of the ITU-R Study Groups, the Radiocommunication Assembly and the current key areas of standardization in ITU-R, with due reference to ITU-R Recommendations, Reports and Handbooks. Some examples of current standardization activities in each of the ITU-R Study Groups are cited, which include those of broadcasting technologies, emergency radiocommunications and environmental and climate monitoring.
