

**International and national spectrum regulatory frameworks
(Alexandre VASSILIEV)**

The presentation describes the main goals and objectives, principles, methods and mechanisms applied for international and national radio-frequency spectrum management.

It describes the existing ITU Radiocommunication Sector (ITU-R) mission, role, activities and instruments in relation to the international spectrum regulatory framework and satellite orbit/frequency management.

The presentation also describes the basic functions of national spectrum management system and the ITU adopted structure of such system.
