New Technologies and Services: Change and Convergence

The way voice services are provided is changing. The role of mobile services vis-à-vis fixed services is changing. The way Internet access is provided is changing. There is tremendous change in the nature of data services especially those involving smart phones. There is a rapid growth in machine to machine communications. New types of services are envisaged. There has been and there is ongoing tremendous evolution in both access and core infrastructure. The essential common factor is convergence. The changes in services and technologies require corresponding changes in perspectives for all involved.
