

Digital Dividend What is it? Why now?

Radiocommunication Bureau

8-9 August 2011

ITU – CBU Workshop, Barbados

Agenda

- What is Digital Dividend?
- Why decide on Digital Dividend allocation now?

8-9 August 2011

ITU – CBU Workshop, Barbados

Digital Television

- The digitalisation of the Terrestrial TV brings and offers better quality and new services such as HD to the viewers.
- The characteristics of digital TV standards allow the possibility to multiplex more than one source and broadcasting more than one programme in a same RF channel.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 3

Digital Flexibility

- The transmission characteristics of digital systems involve a number of parameters which can be adjusted to trade-off service area, quality reception, transmission power, data capacity and spectrum requirement.
 - Type of digital modulation (e.g. QPSK, 16 QAM, 256QAM)
 - Error correction coding (e.g. rate $\frac{1}{2}$, $\frac{3}{4}$)
 - Motion picture compression algorithm (e.g. MPEG2, MPEG4).

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 4

Spectrum Requirement

- The overall system (e.g. the families of ATSC, ISDB, DMBT or DVB), reception mode (e.g. fixed, portable, portable indoor, mobile) and the selected parameters chosen will determine the overall spectrum required to satisfy the program requirements.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 5

Digital Efficiency

- A single analog program can be broadcast on one transmission channel of 6 MHz to 8 MHz bandwidth
- The same transmission channel could carry from 2 to 12 digital equivalent programs simultaneously
- Most Digital TV standards allow the implementation of single frequency networks, more spectrum efficient compared to the analogue networks.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 6

Define Digital Dividend

- The digital dividend is the amount of spectrum made available by the transition of analogue television to digital.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 7

Size of Digital Dividend

- Given the very important gains in spectrum efficiency resulting from the transition to digital, the digital dividend may represent very significant amounts of spectrum.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 8

Allocation of Digital Dividend

- Broadcasting services (e.g. provision of more programs, high definition, 3D or mobile television)
- Other services, such as the mobile service, in a frequency band which could be shared with broadcasting (e.g. short range devices) or in a distinct, harmonized allocation (e.g. IMT).

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world

9

Digital Migration

- Transition to digital TV is not an option: analog equipment/spares (TX and RX) will eventually be difficult to purchase or if available at very expensive price.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world

10

Need for Spectrum Planning

- Any intermediate plan is costly and disruptive. Even more when it is not planned in advance. Social impact: need to maintain reception + compensate cost impact
- need for interactively coordinate with neighboring countries
- harmonized regional approach necessary. To maximize return avoid Interference.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 11

Need for timely decision

- The decision for the resources is crucial for the technical frame:
 - Key for steps to be taken like for the standardisation
 - Development and timely availability of equipment
- Without the above, there won't be any provision of any service.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 12

The Decision is Now!

- Avoiding a digital divide should be a substantial interest for all countries. The provision of broadband access in any part of any country is an inevitable consequence. This makes it necessary to make use of suitable resources (frequencies) as soon as possible.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world

13

Need to coordinate

- Coordinated use of the 800 MHz band would also facilitate roaming.
- The best possible approach is to provide harmonised conditions and to avoid fragmentation.
- Harmonising conditions and applying these in due time for achieving a “critical mass”, to ensure economies of scale.

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world

14

The USA

- Early identification
- Sold even before ASO – June 2009
- 18 X 6 MHz = 108 MHz

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 15

700 MHz Auction – Mar 2008

(Source: GSMA)

Verizon	\$9.4 Billion
AT&T Mobility	\$6.6 Billion
Frontier Wireless	\$711 million
Qualcomm	\$558 million

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 16

JAPAN

- 10 UHF channels = 60 MHz
- VHF = 70 MHz
- A total of 130 MHz

8-9 August 2011

ITU – CBU Workshop, Barbados

Committed to connecting the world 17

Australia

- **126 MHz** from **694-820 MHz**
- Consultation on the digital dividend band configuration, licence design and the method of allocating the spectrum. The closing date for submissions was 6 Dec 2010.
