

My name's George Muhoro Githiyyi – a young man from Kenya, with a lot of zeal and hope for furthering my studies in a communication's related industry and perspective, as a build-up to a very interesting and fulfilling career in communication.

Having just recently graduated from university back home in Kenya with a Bachelors of Science in Information Technology (BScIT) degree, I got a lucky break for exposure into the communication world, precisely, telecommunication, through one of the ITU Youth Programme Initiatives which

is the Youth Incentive Scheme a Project of recruitment and mentoring by ITU.

I hence thereof, highly appreciate and applaud the noble venture that the ITU has taken through the Resolution 38, and I am very impressed of the commitment of Mr. H. Touré, the Director of the BDT, who deeply involved himself for this Youth Programme to take off and come true. This special initiative envisions taking and making available the very core of telecommunications technology to the youth, most of whom have more than above average talent and the capability to learn the ropes and get the skills, vital and necessary to sustain the telecommunication's world in future. The ITU Youth Programme is very well in accordance with the popular and universal saying that "the youth are the future," hence, the noble steps being taken to integrate them into technology's systems and pipelines, to ensure technology transfer.

Through my rich recent experience with the ITU Youth Programme and the precious exposure into the telecommunications world made possible by the Telecommunication Development Bureau (BDT), I will forever walk the world of technology, no-doubt with a higher and enriched perception of the vast essence of telecommunication development. For my academic and career aspirations in Electronic Media, I can testify that I surely have a rich foundation and stepping stone with ITU's mentoring telecommunication experience through the precious Youth Incentive Scheme project, and I look forward and foresee a bright future.

I'm very happy to have this opportunity and hope that all potential sponsors, telecommunications administrations, BDT Sector Members and/or any other private companies which could support this ITU initiative to contribute and encourage the development of the Youth Programme don't hold back, and this is the only way in which young people like me can have access to such important mentoring to establish the first fundamental milestones to successful and professional careers.
