

ITU-T Workshop “Opportunities and Challenges in Home Networking”

Abstract

Geneva, 13 – 14 October 2005

Speaker: Jean-François Cadiou
France Telecom

Session: 5: Quality of Service in Home Network

Title of Presentation: **Managing QoS in the home environment for multiservices distribution**

Formed by major telecommunication operators, HGi (HomeGateway Initiative) is focused on the specification and development of the next generation home gateways. HomeGateways are on the border of home networks and access networks and therefore have a major role to play in the distribution of services within the home. One of the key issues identified in the HGi is the management of home QoS. This presentation will then present at a very early stage achievements of the QoS WG in the HGi Framework. Following short HGi description and general considerations on Home QoS, major trends and requirements followed by the QoS WG will be presented.
