

ITU-T IPv6 Workshop

Abstract

Geneva, 22 – 23 June 2005

Speaker: Prof. José Fernandes
FCCN

Session: 2.2 Ipv6 network practice and commercial application

Title of Presentation: Ipv6 benchmarking

The presentation focuses on the Benchmarking activity being carried out within the IPv6 European Task-Force Steering Committee.

The key guidelines of the Steering Committee are outlined, and the results of an IPv6 questionnaire made in Portugal last year (to fixed, mobile, isp and cable operators) are summed up.

The topics covered by the Benchmarking activity are described, along with its design.

Two data recollections already took place, and the evolution is plotted according to the numbers that were possible to gather in those occasions.
