

Lewis Robart is currently employed as a Senior Analyst, IP Telecom, within the Spectrum Engineering branch of Industry Canada. Responsibilities include engineering analysis of new telecommunications technologies, government and industry briefings on telecommunication trends and directions, and national/international telecommunications standards development. Telecommunications security is the primary technical focus within the role.

Previously Lewis has held a variety of positions within Bell Northern Research / Nortel Networks including software development, systems engineering, and product management. Lewis worked on standards development for Nortel within various national, regional and international Standards Development Organizations, including development of Intelligent Networks Capability Sets 2 and 3 in ITU-T SG11.

Lewis holds a Master's degree in Electrical Engineering; his thesis focused on cryptographic security protocol analysis.
