6TH WORLD TELECOMMUNICATION/ICT INDICATORS MEETING, GENEVA, 13-15 DECEMBER 2007

SOURCE: STAT, ITU

TITLE: WSIS Target a: ICTs in Villages

WSIS Target a: ICTs in Villages

Michael Minges
Senior Market Analyst
Telecommunications Management Group, Inc.

ICTs in Villages

World Telecommunication/ICT Indicators Meeting

December 2007

WSIS Plan of Action

B. Objectives, goals and targets

6. Based on internationally agreed development goals, including those in the Millennium Declaration, which are premised on international cooperation, indicative targets may serve as global references for improving connectivity and access in the use of ICTs in promoting the objectives of the Plan of Action, to be achieved by 2015. These targets may be taken into account in the establishment of the national targets, considering the different national circumstances:

- a. to connect villages with ICTs and establish community access points;

ICTs in Villages

World Telecommunication/ICT Indicators Meeting

December 2007

Comments - WSIS Target a

a. to connect villages with ICTs and establish community access points;

- Village implies rural
 - “a group of houses and other buildings, such as a church, a school and some shops, which is smaller than a town, usually in the countryside” [Cambridge Advanced Learner's Dictionary]
- Village as unit of measurement
 - Practically all national statistical systems do not disseminate data in this way
- “Connect villages with ICTs”
 - ICT is undefined
 - How many villages to connect is unspecified...
- “Community access points”
 - Undefined in the Plan of Action

Hardly any countries are directly tracking this...

Population distribution of localities

Source: Adapted from Jordan Population & Housing Census 2004

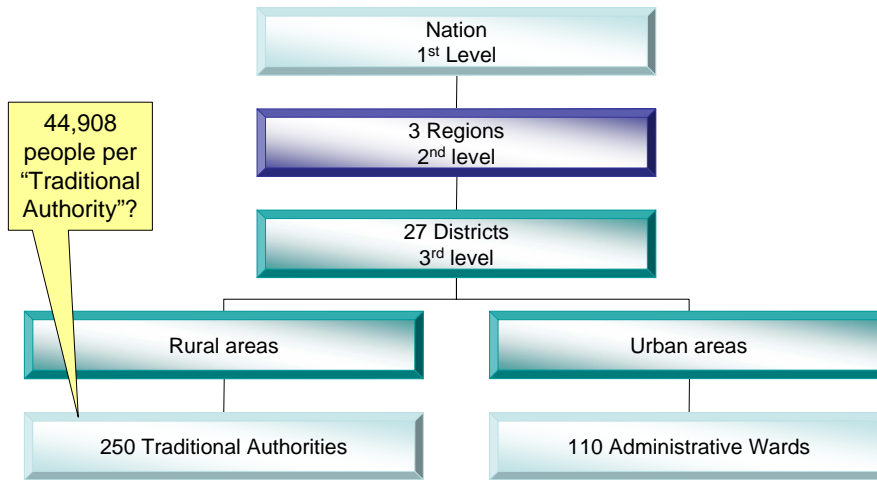

Villages

- Few countries readily publish data on number of villages
- Information on administrative divisions usually stops at “region/state”
- **No precise definition of village. Implies rural but definition of rural varies within & between countries**

Levels of measurement

Spatial hierarchies in Malawi

Differing national counts of localities

ICTs in Villages

World Telecommunication/ICT Indicators Meeting

December 2007

Urban definition comparison

- 105 countries based their urban data on **administrative** criteria, limiting it to the boundaries of state or provincial capitals, municipalities or other local jurisdictions; 83 use this as their sole method of distinguishing urban from rural.
- 100 countries define cities by **population size or population density**, with minimum concentrations ranging broadly, from 200 to 50000 inhabitants; 57 use this as their sole urban criterion.
- 25 countries specify **economic** characteristics as significant, though not exclusive, in defining cities-typically, the proportion of the labour force employed in non-agricultural activities
- 18 countries count the availability of **urban infrastructure** in their definitions, including the presence of paved streets, water supply systems, sewerage systems, or electric lighting.
- 25 countries provide **no definition** of “urban” at all
- 6 countries regard their **entire population** as urban

http://www.scorus2006.ae.wroc.pl/modules/Downloads/presentations/Markandey_Rai.pdf

Number of villages methodology

- Some countries have official administrative data on number of villages
- Secondary sources on number of villages (e.g., electricity utility, health surveys, **election / local government data**, etc.)
- Census enumeration areas
- Online gazette of geo-coded populated localities
- Estimate base on region average village size

Overall global demographics

| | Population (millions) | Rural population (%) | Rural population (millions) | Number of localities (000s) | Size |
|---------------------------------|-----------------------|----------------------|-----------------------------|-----------------------------|--------------|
| Developing | 5,108 | 56% | 2,850 | 2,961 | 1,826 |
| East Asia & Pacific | 1,717 | 58% | 1,000 | 956 | 1,795 |
| Europe & Central Asia | 446 | 33% | 148 | 285 | 2,841 |
| Latin America & Caribbean | 529 | 21% | 113 | 349 | 1,645 |
| Middle East & North Africa | 308 | 42% | 129 | 107 | 2,961 |
| South Asia | 1,354 | 72% | 977 | 868 | 1,560 |
| Sub-Saharan Africa | 754 | 64% | 484 | 396 | 1,904 |
| Developed | 1,013 | 22% | 228 | 248 | 4,092 |
| World | 6,145 | 50% | 3,102 | 3,059 | 2,009 |
| Developing as % of world | 84% | | 93% | 92% | |

ICTs in Villages World Telecommunication/ICT Indicators Meeting December 2007

- ★
- ## ICTs in villages
- ICTs not defined in Plan of Action
 - For this study, consider fixed telephony access for localities
 - Also consider electricity
 - “Establish community access points” not defined in Plan of Action. However ITU has done pioneering work in this area and Partnership has identified following indicator:
 - A10: Percentage of localities with public Internet access centres (PIACs) by number of inhabitants (rural/urban)
- Same data problems as localities: Few countries collect this information or offer it in the format required**
- ICTs in Villages World Telecommunication/ICT Indicators Meeting December 2007

Peru

Number of Public Internet Access Points (PIAP)

| | Locality by size | Number of localities | Population | Locality with PIAP | Population covered by PIAP | Percent with PIAP | |
|--------------|------------------|----------------------|-------------------|--------------------|----------------------------|-------------------|------------|
| | | | | | | Locality | Population |
| Urban | >500 000 | 1 | 582,975 | 1 | 582,975 | 100% | 100% |
| | 50 000-499 999 | 122 | 12,501,916 | 88 | 9,212,782 | 72% | 74% |
| | 10 000-49 999 | 228 | 3,891,678 | 153 | 3,100,222 | 67% | 80% |
| | 2 500-9 999 | 255 | 1,259,256 | 126 | 553,183 | 49% | 44% |
| Rural | 1 000-2 499 | 565 | 831,928 | 75 | 86,548 | 13% | 10% |
| | 500-999 | 1,933 | 1,273,209 | 67 | 40,002 | 3% | 3% |
| | 100-499 | 19,809 | 4,292,805 | 462 | 135,093 | 2% | 3% |
| | <100 | 46,194 | 1,290,252 | 48 | 2,812 | 0.1% | 0.2% |
| Total | | 69,107 | 25,924,019 | 1,020 | 13,713,617 | 1% | 53% |

Source: OSIPTEL, El Acceso Comunitario a las TICs (2004)

29% of population age 6+ use Internet, 75% access from public location
46% in Lima, 37% other urban and 8% rural. Source: INE, April-June 2007.

Spatial difference between fixed & mobile

5 localities
 1 with fixed network = 20%
 3 with mobile coverage = 60%
 1 with none = 10%

Mobile coverage & settlements

Malawi

Mobile population coverage:
 Total (TC): 93%
 Rural (RC): 92%

Population:
 Total (TP): 12.7 million
 Urban (UP): 1.5 million
 Rural (RP): 11.2 million

Rural population coverage=
 $(TC \times TP - UP) / RP =$
 $93\% \times 12.7\text{m} - 1.5\text{m} = 10.3\text{m}$
 $10.3 / 11.2 \sim 92\%$

December 2007

Demand side

- Have looked at availability of infrastructure
- Also important to see how it is used, particularly in the context of rural
- Partnership has identified this indicator:
 - HH9 Location of individual use of the Internet in the last 12 months:
 - (a) at home;
 - (b) at work;
 - (c) place of education;
 - (d) at another person's home;
 - (e) community Internet access facility (specific denomination depends on national practices);
 - (f) commercial Internet access facility (specific denomination depends on national practices); and
 - (g) others

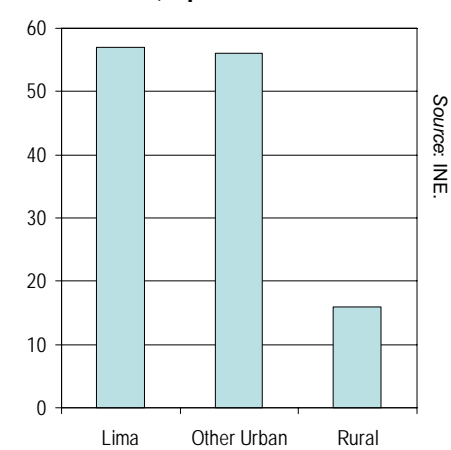

Internet café usage

% of Internet users who used Internet Café in the last 3 months, 2006

% of homes with member who used Internet Café, April-June 2007

Recommendations & conclusions

- Government agency responsible for ICT compile existing information
 - Often available from NSO but not “user-friendly” (e.g.):
 - Language
 - Disaggregated
 - Hard to locate
- Locality data should be broken down by population
- Mobile coverage broken down by technology
- Other WSIS targets
