

The smart city architecture and service practice in China

ITU-D SG2 panel session on Q1/2 thematic event

Chen CAI chencai@caict.ac.cn

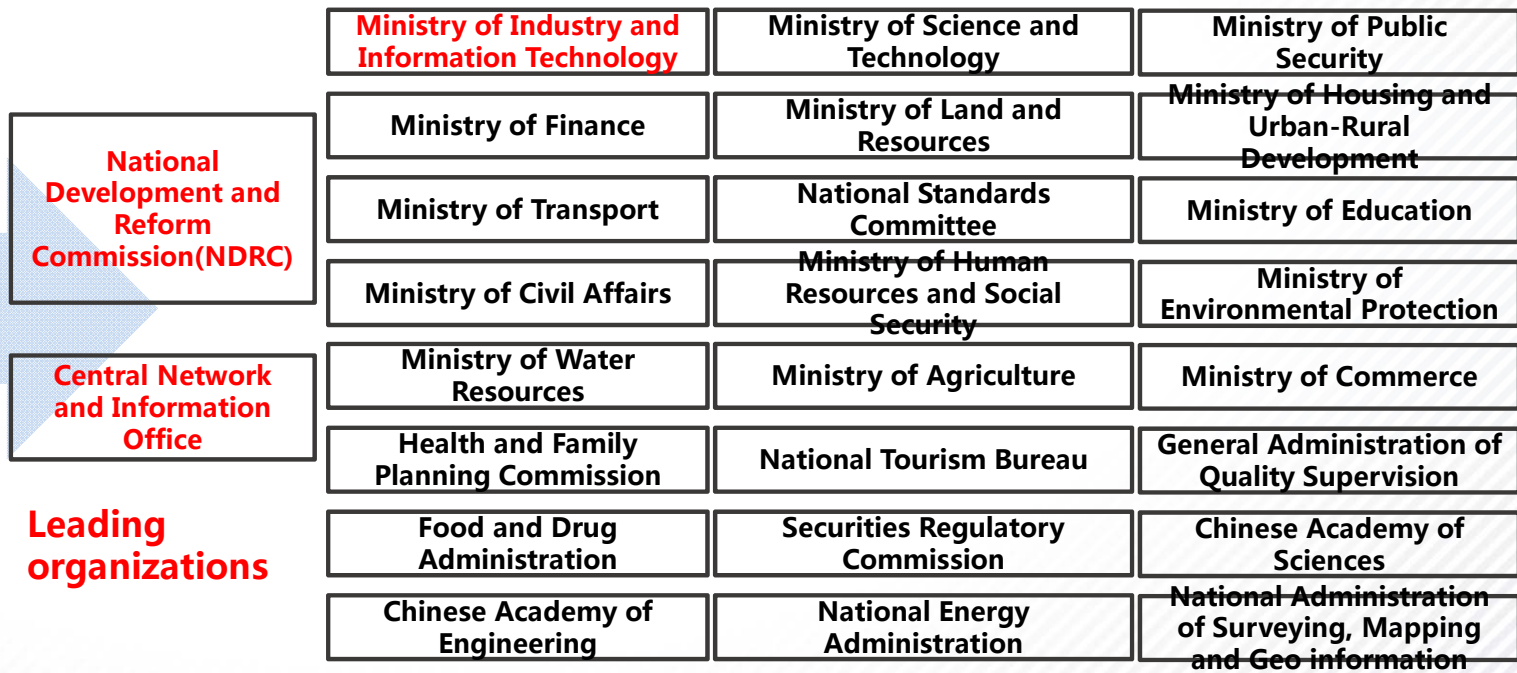

March 25. 2019

Smart city is transferring Ministries Promoting to Inter-Ministry Coordinated Promoting

Ministries promoting

- Development and Reform Commission
- Ministry of Industry and Information Technology
- Ministry of Civil Affairs
- Ministry of Science and Technology
- ...

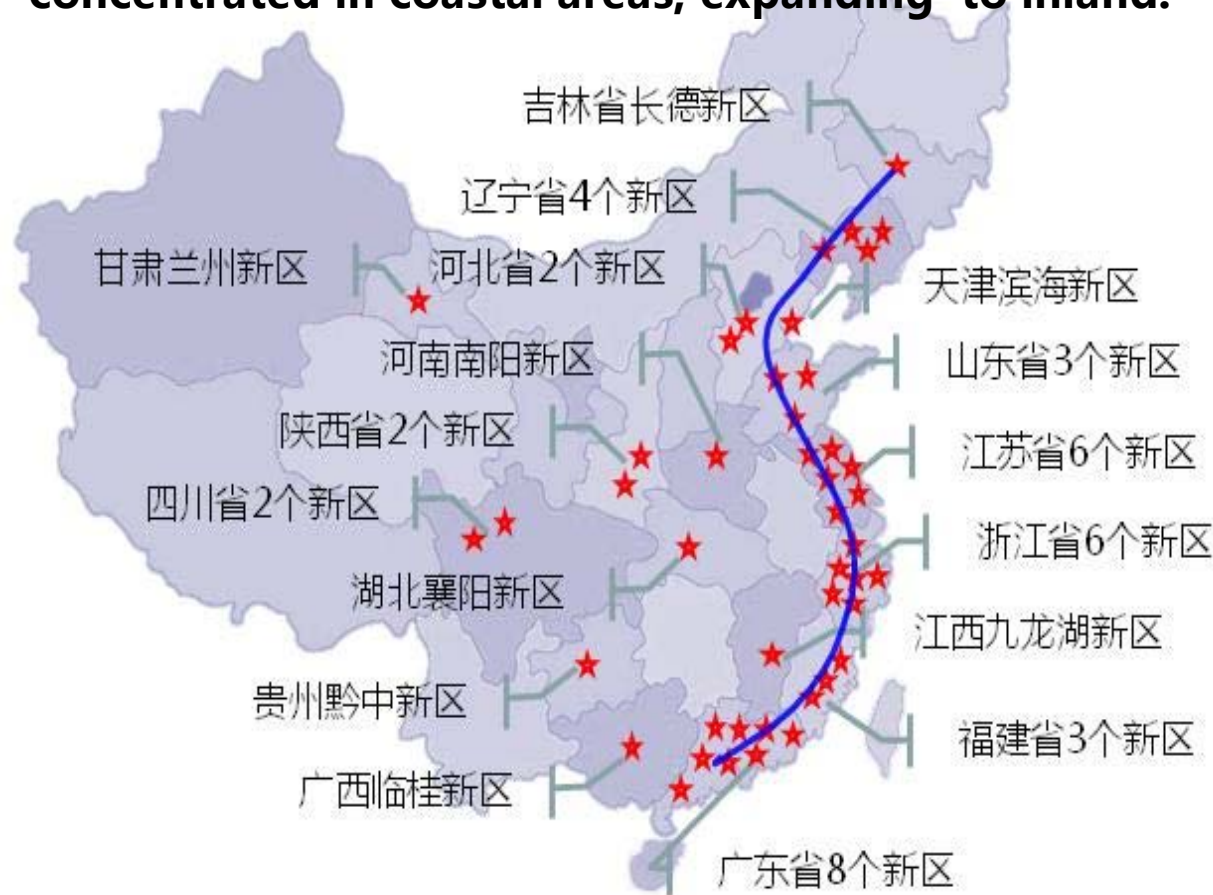

National level: set up the inter-ministerial coordination working group

Participation organizations

Smart City is Sinking to **Smart New City or New Town**

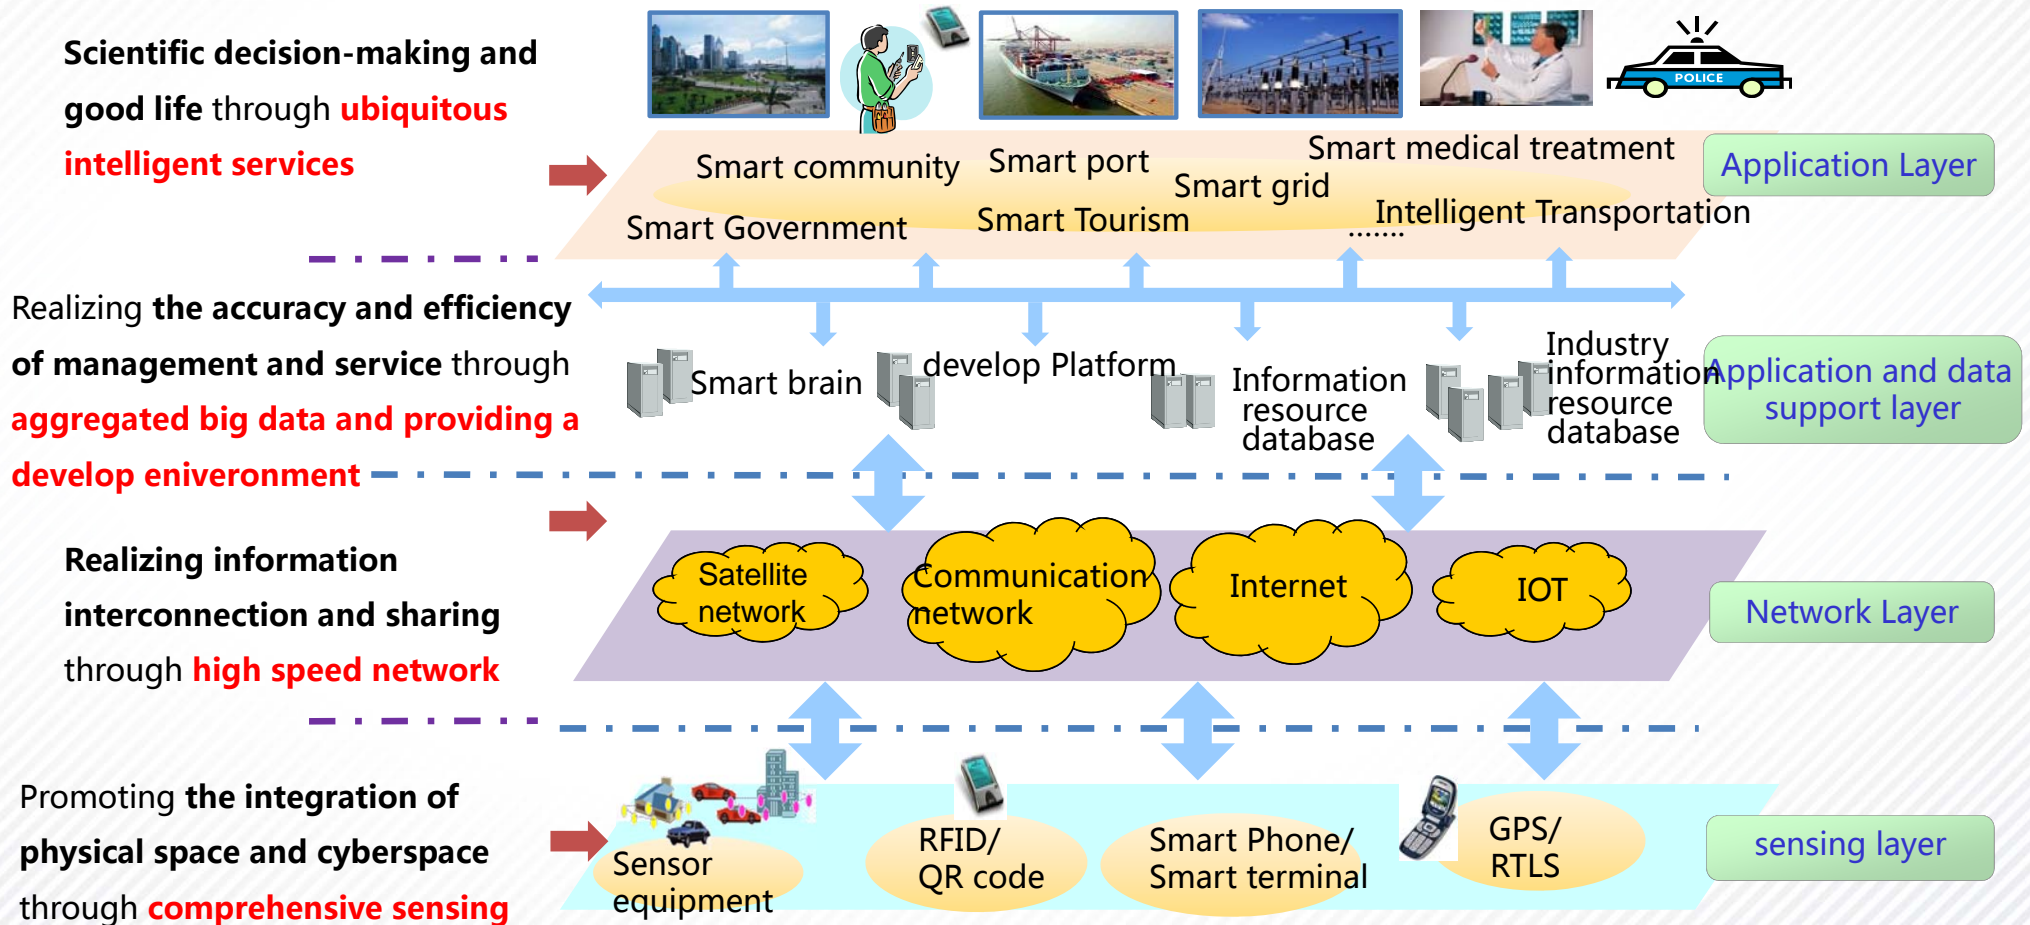

The new town and new district of smart city are mainly concentrated in coastal areas, expanding to inland.

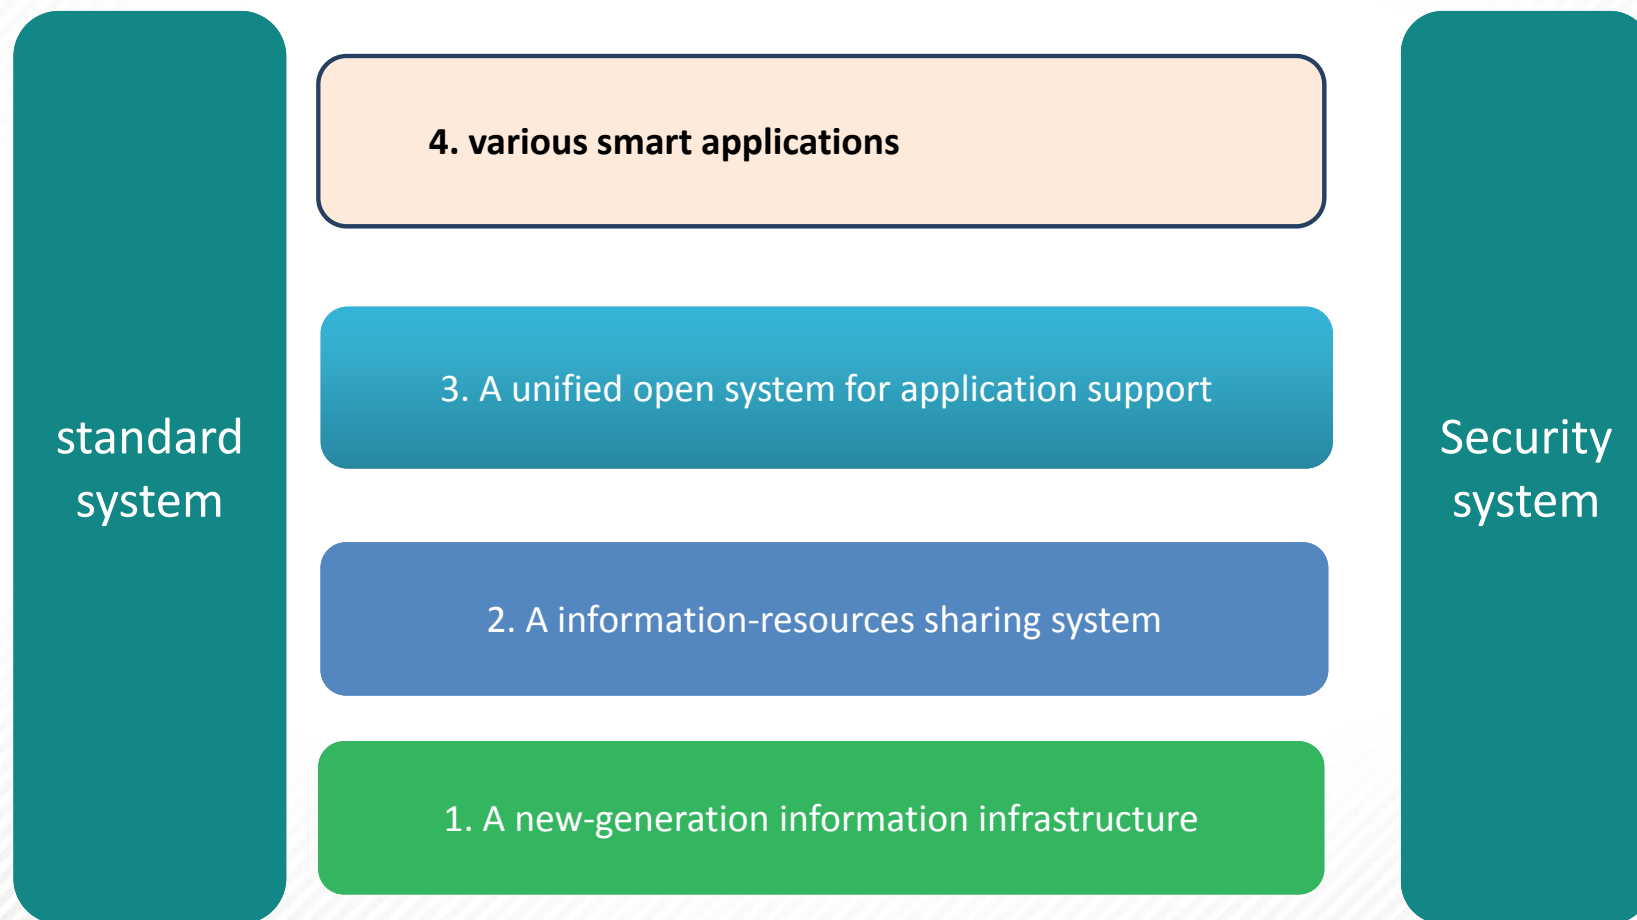

Why green field?

- **Advanced economy—means they have money to do this**
- **Talented people----means they have technology to build this**
- **Open-minded----means they are easy and willing to accept kinds of new concepts, not only smart city**

What is Smart City : 4 layer model

1. A new-generation information infrastructure

computing infrastructure

Cloud computing infrastructure
Edge computing equipment
Super computing infrastructure

transmission infrastructure

fixed network
mobile network
IoT network

Sensor infrastructure

Homogeneous Access
Heterogeneous Devices

1. facilitate cross-department and cross-sector information resources sharing

2. analysis and visualisation on aggregated big data

3. open data to society

2. A information-resources sharing system

Data shareing and analysis platform

Open Data platform

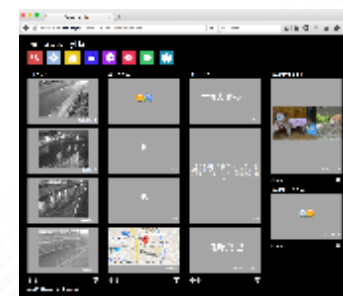

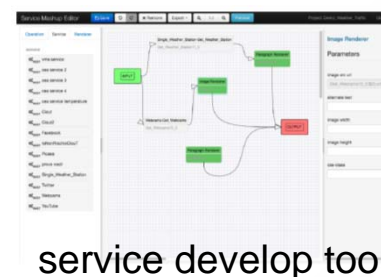

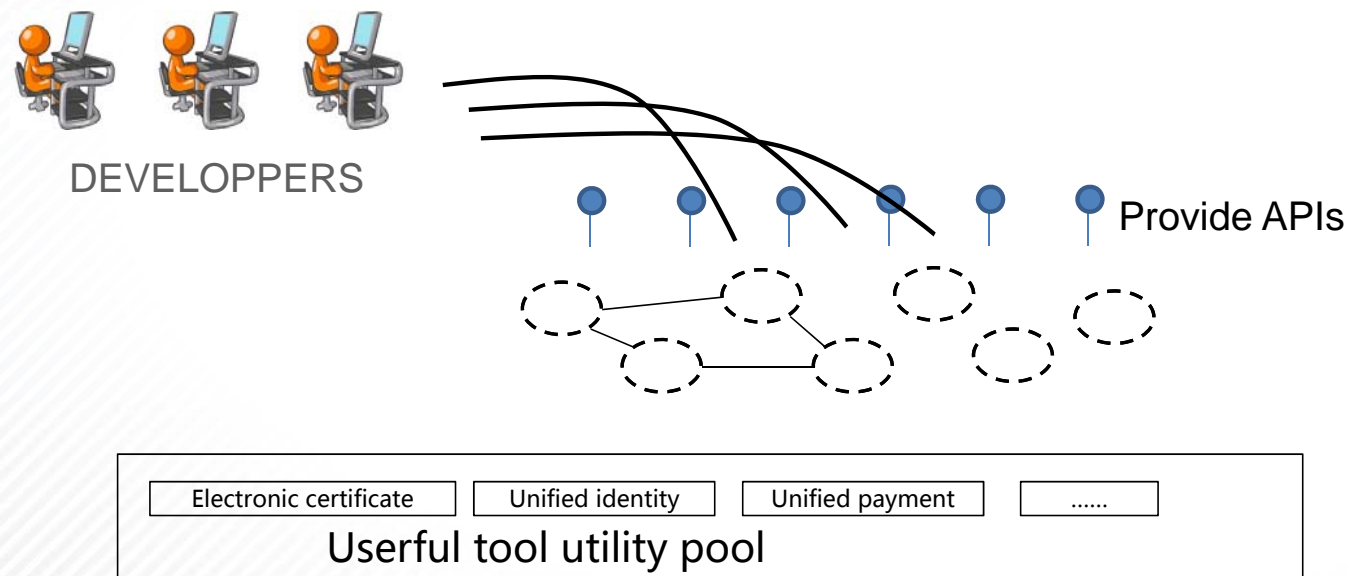

Data resource catalog

- attribute of data, the quaility and quantity of data;
- Population-base database
- Company-base database
- Geospatial database
- cross-different department
- e.g, Resident social security
- single department subject data

3. A unified open system for application support

1. provide a develop tool to easily deploy smart services;
2. monitor & manage resources;
3. mashup data to create a city dashboard

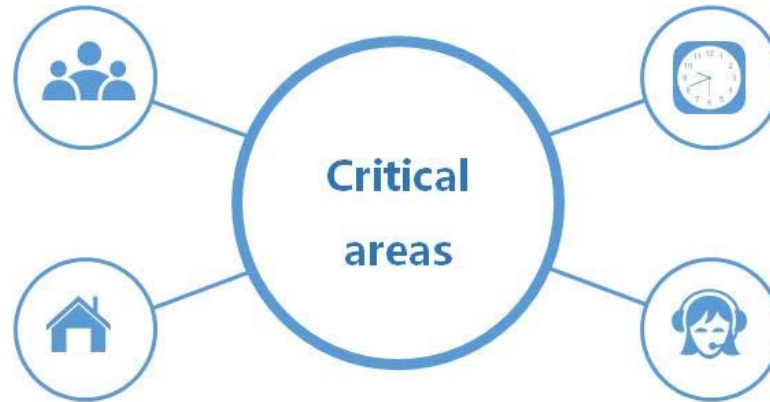

Citizen-centric services

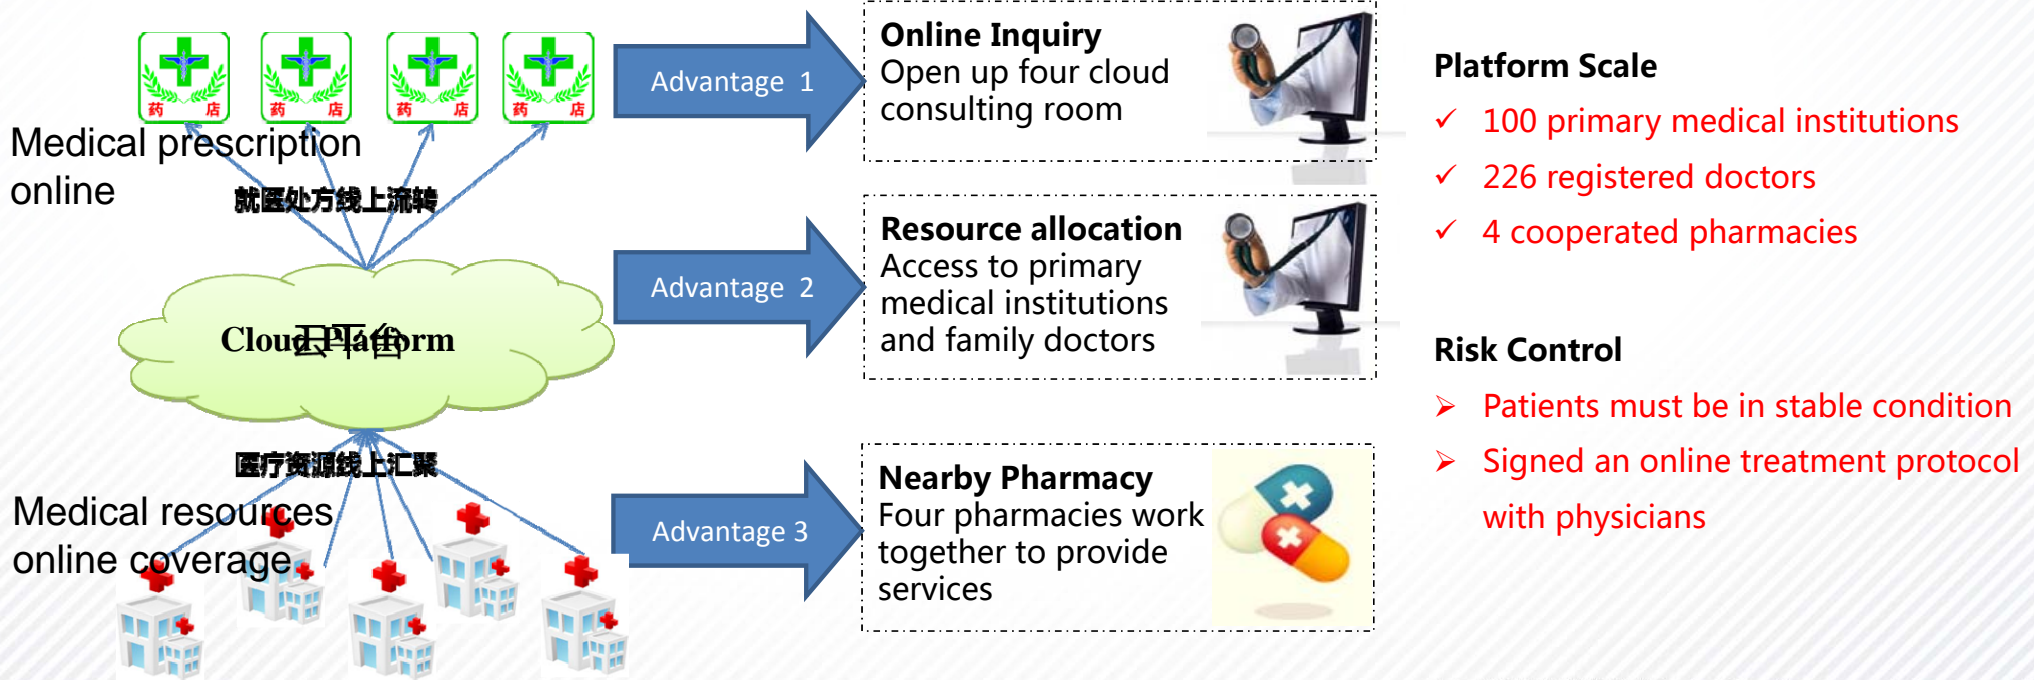

Citizen Public Service

Governmental Service

Urban Management

Cloud Hospital : Ningbo Municipal Government take **the government-led, market-oriented operation mode**, and establish a online-medicine services and collaboration platform, called "Cloud Hospital".

Yinchuan City established the **Administrative Approval Service Bureau**. More than 500 approvals and public service items, which are under the responsibility of 26 municipal departments, including education, industry, and transportation, were transferred to the single Bureau (Administrative Approval Service Bureau), and this Bureau provide online and offline approval service, decreasing the citizen approval time largely.

Different department accept different Administrative approval

In the past, the citizen had to run many departments and cover many chapters.

227.3 minutes

- Foreground comprehensive reception
- Background classification approval
- Output via unified window or on Internet.

By One-stop Approval Service, citizen only go to one department, some approval even finished online

12 minutes

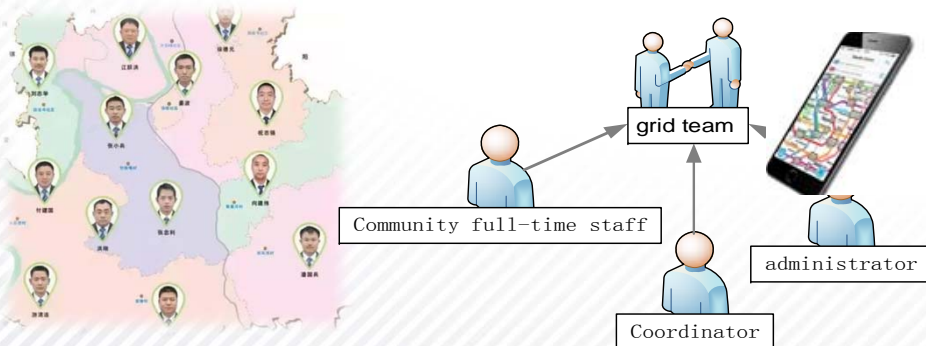

Guangzhou Yuexiu District has taken the lead in exploring the smart grid management services. According to **the average 200 households**, Yuexiu district, including 222 communities in 18 streets, were divided into 2016 grids, realizing **grid coverage and information network sharing**.

Basic framework

- In a basic grid, a grid team, in charge of grid data collection
- event reporting, and processing.

Each "grid" covers 200 households.

A part-time grid worker team in charge of Grid with Smart device

A grid involves many management affairs, such as

- Medical management
- Traffic management
- Small and micro water management
- Environmental monitoring management

Benefit

- Broke the information barriers of various department, such as civil affairs, urban management, and comprehensive management.
- Make a transition from each special department management to gridded collaborative management.
