

## AI to Regulate AI

---

Joint Workshop (Q4/1 & Q6/1)

Personal data usage: regulatory and economic perspectives

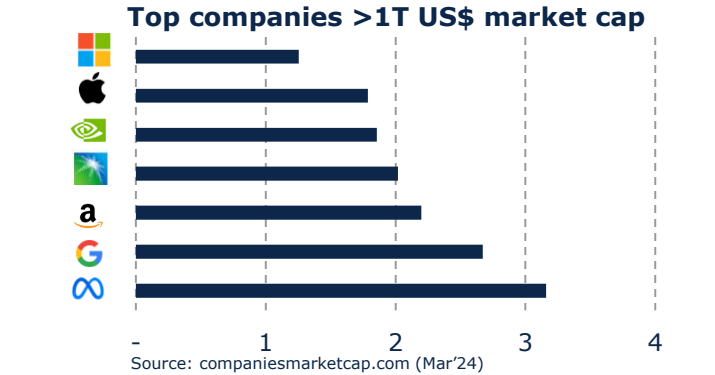

April 2024

# AI is meant to cause a relevant impact on society, but personal data, a key input for models, remains today in corporate silos and the nascent data economy is:

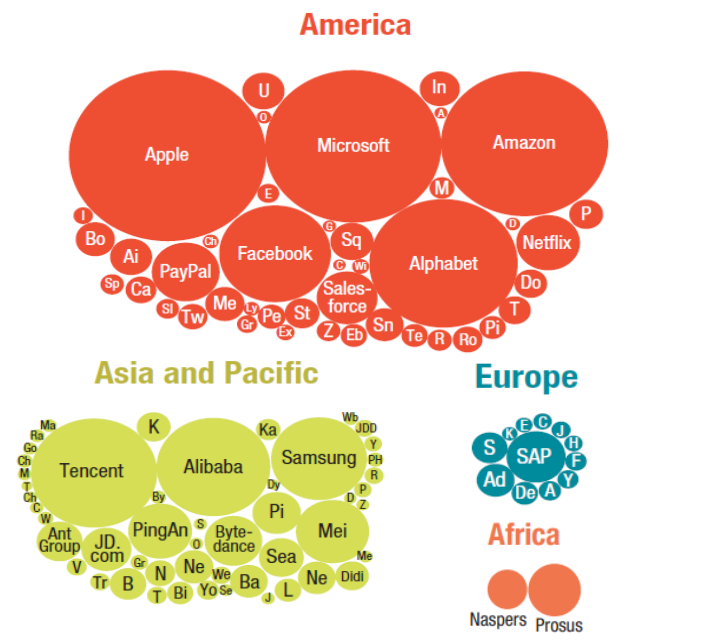

## Potentially impactful

- ▶ Data Economy Up to 827 bn€ in 2025 within EU27+UK
- ▶ Data economy impact on EU27+UK up to €1.3 billion in 2030 (EC, 2024)
- ▶ Data-driven decision making to reach US\$2.5 trillion globally by 2025 (McKinsey & Co 2016)
- ▶ AI to potentially deliver additional global economic activity of US\$13 trillion by 2030 (McKinsey & Co 2018)
- ▶ Global GDP could be up to 14% higher in 2030 as a result of AI, an equivalent of US\$15.7 trillion (PwC 2017)

## Led by horizontal oligopolies

## Geographically imbalanced

## Top 100 Global Digital Platforms by market capitalization (2021)

Source: UNCTAD. Digital Economy Report. Cross-border data flows and development: For whom the data flow. 2021

**This concentration is mainly due to two factors: the peculiarities of data as an economic good, and increased network effects of data services**

### Data as an economic good

Available

Costly

Freely replicable

Non-depletable

Reusable

Non-rivalrous

Context-specific

Inherently combinatorial

### Increased network effects

Traditional network effects

Additional value coming from usage data feedback loops

# The massive collection and exploitation of personal data in exchange for services has raised a general concern about privacy and AI ethics...

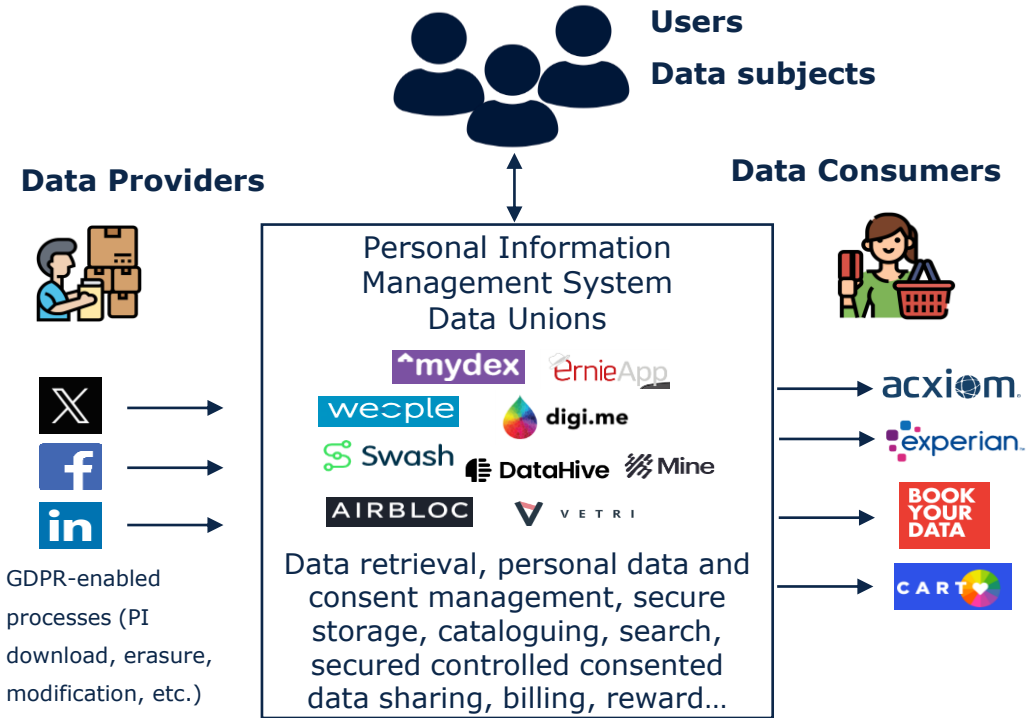

# ... which inspired a 1st wave of data protection & a 2nd set of IT-like regulations in the EU dealing with competition issues, data exchange & services, and AI risks

Digital Regulation	Objective	Traditional IT regulation
 <p><b>Digital Markets Act</b></p>	<ol style="list-style-type: none"> <li>1. Foster competition and deal with digital markets dynamics and inherent concentration</li> </ol>	<ul style="list-style-type: none"> <li>▶ Market analysis and dominance</li> </ul>
 <p><b>Data Governance Act</b></p>	<ol style="list-style-type: none"> <li>1. Create the conditions for harmonised data sharing</li> <li>2. Neutrality of intermediaries</li> </ol>	<ul style="list-style-type: none"> <li>▶ Licensing &amp; registration</li> <li>▶ Net Neutrality</li> </ul>
 <p><b>Data Act</b></p>	<ol style="list-style-type: none"> <li>1. Maximise the value of data in the economy</li> <li>2. Widen stakeholders that have control over data</li> <li>3. Increase the availability of data for innovation</li> </ol>	<ul style="list-style-type: none"> <li>▶ Technical regulations – interconnection</li> <li>▶ Number (data) portability</li> </ul>
 <p><b>Digital Services Act</b></p>	<ol style="list-style-type: none"> <li>1. Address fundamental rights of users</li> <li>2. Ensure a safe, predictable and trusted online environment</li> </ol>	<ul style="list-style-type: none"> <li>▶ Consumer protection and rights</li> <li>▶ Obligations such as law interception</li> </ul>
 <p><b>AI Act</b></p>	<ol style="list-style-type: none"> <li>1. Ensure AI trustworthiness</li> </ol>	<ul style="list-style-type: none"> <li>▶ Technical QoS Regulations</li> </ul>

**However, more disruptive approaches to develop and regulate data markets may be studied and required in the future.**

**PIMS / Data Unions**

**Data as Labor**

**AI regulatory authorities will require automated monitoring processes to enforce new regulations and exert some control over the market. We will need AI to regulate AI**
