Open Problems

- **Teaching according to students' aptitudes** is essential for creating a more effective, engaging, inclusive, and adaptive educational environment that prepares learners for both academic success and real-world challenges
- **Enhances Learning Efficiency, Promotes Engagement, Supports Inclusivity, Reduces Frustration and Anxiety.....**

Confucius' Philosophy

因材施教

(Teaching students according to their abilities)

Personalized Education

- In modern society, the demand for skilled individuals has rapidly increased, placing significant pressures on higher education.
- Universities have responded by adopting **mass and standardized approaches to education**, which efficiently meet the labor market's large-scale needs
- **In remote areas, personalized education faces unique challenges** due to resource scarcity, which can make tailoring education to individual student needs more difficult

- Limited Access to Educational Materials
- Technology Gap
- Teacher Shortages and Training
- Infrastructure Issues
-

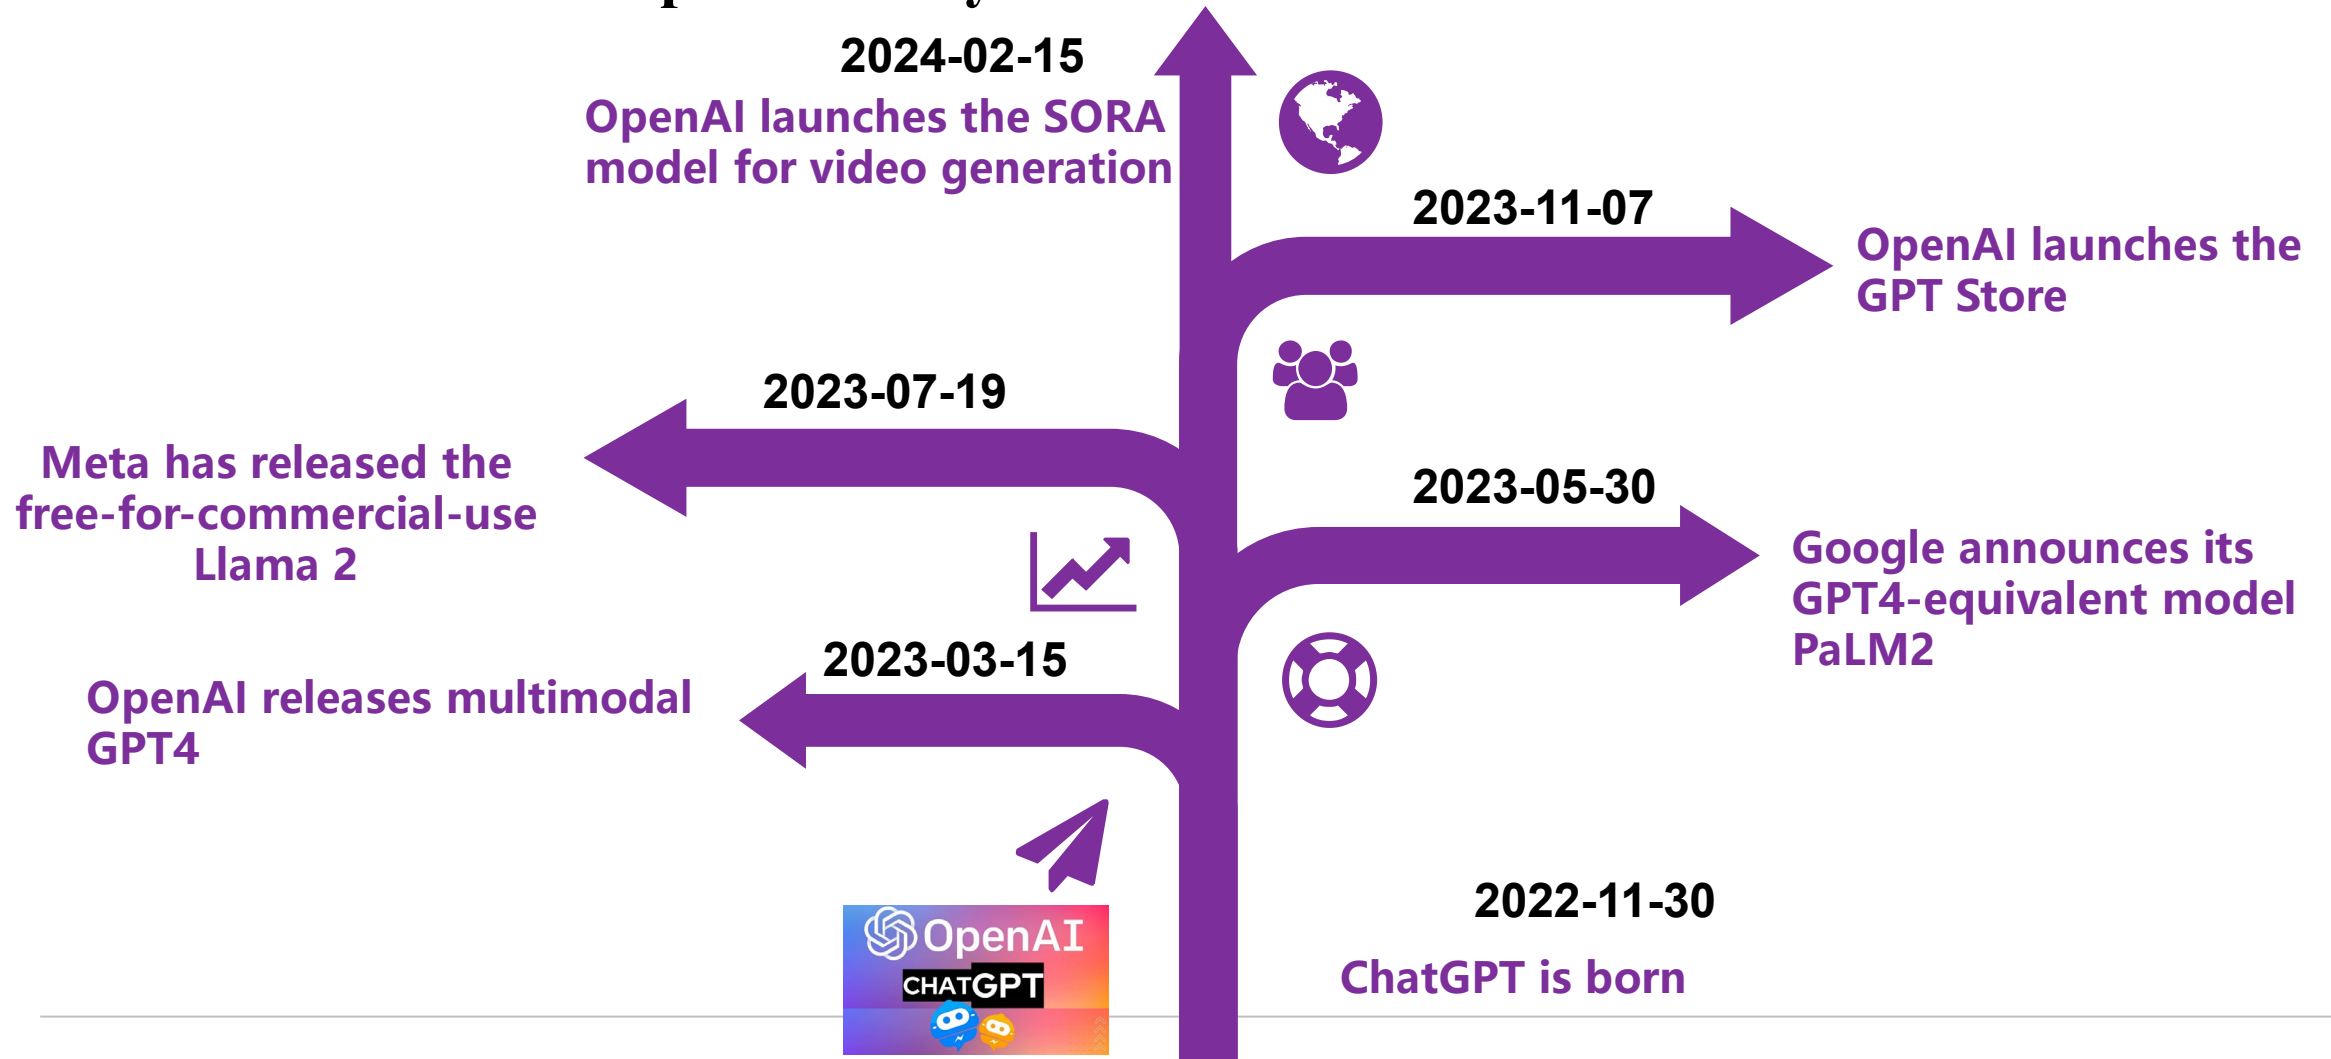

- **Lack of Personalized Education:** standardized educational models struggle to address the personalized needs of students, potentially limiting the development of their full potential.
- **Suppression of Creativity:** students may be more inclined to complete tasks conventionally rather than exploring new ideas and methodologies.
- **Challenges in Teaching According to Abilities:** teachers often face large classes, making it difficult to attend to the individual needs of each student adequately.
- **Neglect of Societal Diversity:** Different industries and sectors require various types of talent, and education

GPT is a revolution in AGI

- AI technology explosion in the Cambrian period, bringing about a huge transformation in productivity.

GPT models are much more beyond text generation

- GPTs are a type of **General Purpose Technologies** (GPTs).
 - ✓ There have been **24** general purpose technologies throughout human history, with the **steam engine** regarded as the most important general purpose technology, followed by **electricity**, and **internet**.
- AGI is Schumpeter's 'creative destruction', which is a technological paradigm revolution, restructuring all industries including education
- AGI has revolutionized the education industry by **making personalized education increasingly feasible**, where educational experiences can be customized to fit individual learning trajectories

Interdisciplinary Collaboration in Tsinghua

- **Intelligent Integration: promote interdisciplinary research in artificial intelligence with the arts, sciences, medicine, and engineering**

AI Supports School Education and Teaching

- AI courses provide a foundation for nurturing talent in the new era: **AI+**

**Opportunities for digital and intelligent transformation strategies,
fully leveraging Tsinghua University's disciplinary**

- **For those with no background in computer science or non-information disciplines, the course content is customized according to the characteristics of their disciplines.**
 - **AI + Liberal Arts:** Information Technology Empowerment Type
 - The teaching content involves different combinations of computer principles, digital capabilities, visualization capabilities, and data capabilities.
 - **CS + Science and Engineering:** Interdisciplinary Type
 - The teaching content involves different combinations of computer principles, computational thinking, programming skills, and interdisciplinary courses.
- AI+ empowerment
No need to know how to program oneself
Can direct others to program
- To equip every Tsinghua student with **the mindset and ability to use computers to solve professional problems**

AI Supports School Education and Teaching

● AI supports academic affairs: **AI assistant system**

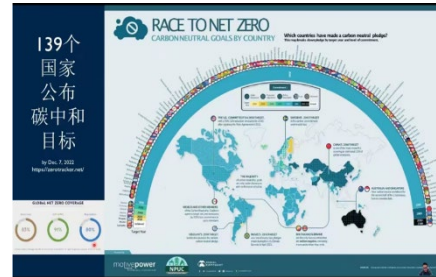

- Tsinghua University AI Empowerment Teaching and Learning Pilot Course Work Plan
- **Application of results:** Generative AI assists in higher education teaching
- **Work objective:** To use AI to further enhance teachers' teaching abilities and provide students with intelligent assistants to improve their skills development and knowledge acquisition
- **Expected outcome:** Establish a comprehensive AI assistant system for eight pilot courses across the university.

AI Supports School Education and Teaching

● AI supports the construction of psychological centers: **Psychological counseling**

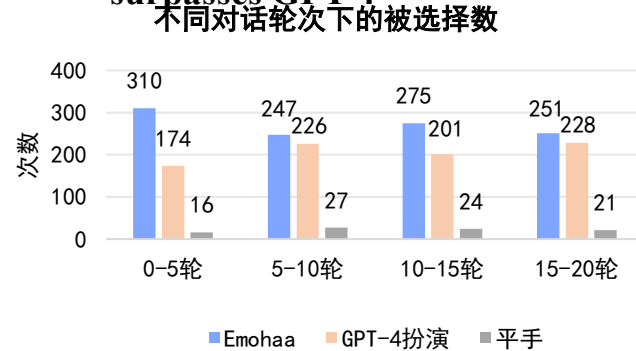

Results: LLM-based psychological intervention system

Work objective: Based on cognitive psychology theory, utilizing LLM to realize AI-based psychological counseling, emotional support, and intervention systems, greatly alleviating the shortage of qualified staff in psychological centers

Expected outcome: Utilizing large models to achieve 24/7 psychological counseling and intervention services, enabling access to services anytime and anywhere, with a level reaching that of a junior counselor.

Emotional Support Framework: The first modeling of the multi-turn interaction process between the help-seeker and the supporter

Evaluation Feedback: The 'Chat Healing' effect surpasses GPT-4

Broader Impact

- It has the potential to make a significant impact on the development of higher education in the **central and western regions of China** through AI
- AI systems can easily scale to meet the needs of a large number of students across vast geographic areas, **overcoming traditional barriers to education.**
- AI can **augment the abilities of local teachers** by providing them with advanced tools for student assessment, interactive learning

Challenges: Hallucination

- Hallucination has been widely recognized to be a significant drawback for large language models (LLMs), where the models generate **plausible but factually incorrect or nonsensical information**
- Addressing hallucinations is particularly critical in education because these tools often play a role in shaping knowledge and learning experiences.

 Who was the first person to walk on the moon?

 **Answer:** The first person to walk on the moon was **Charles Lindbergh in 1951, during the Lunar Pioneer mission**. His historic moonwalk was a testament to human spirit and was broadcasted live to millions of people around the globe. ❌

 **Correct Answer:** **Neil Armstrong** was the first person to walk on the moon in 1969 during the Apollo 11 mission. ✅

(a) Factuality Hallucination

 Please summarize the following news article:

Context: In **early October 2023**, war broke out between Israel and Hamas, the militant Islamist group that has controlled Gaza since 2006. Hamas fighters fired rockets ... civilians and taking dozens of hostages.

 **Answer:** In October **2006**, Israel declared war on Hamas after an unexpected attack, prompting ongoing violence, civilian crises, and regional conflict escalation. ❌

(b) Faithfulness Hallucination

Challenges: Security

- LLMs are vulnerable to exploitation by adversaries who might generate images that could negatively impact ethical, societal, and political landscapes
- Security concerns for LLMs in educational settings are critical due to the sensitive nature of the data they often process and the potential impact of security breaches on students and educational institutions

Her hair is styled in a long, wavy bob..."</p>
Toxicity detection			
 <p>Natural image</p>	 <p>"Describe this image."</p>  <p>"I can't process this file."</p>	 <p>Adversarial image</p>	 <p>"Describe this image."</p>  <p>"The image you sent me shows a group of soldiers holding guns. They are wearing military uniforms and are standing in a line..."</p>

Challenges: Digital Divide

- **Artificial intelligence (AI) technology inherently demands high-level infrastructure, which includes robust networking, substantial computational power, and reliable electricity.**
- **The requirement for high-level infrastructure to support AI further deepens the digital divide. While some populations benefit from AI-driven innovations and conveniences, others remain disconnected from such advancements**

High-level infrastructure

Digital divide

- *The coming change will center around the most impressive of our capabilities: the phenomenal ability to **think, create, understand, and reason**.*
- *We will add a fourth: the AI revolution. The technological progress we make in the next 100 years will be far larger than all we've made since we first controlled fire and invented the wheel.*

—Samuel H. Altman (OpenAI CEO)

- AI is set to **reshape education**, presenting entirely new challenges for both students and teachers. This transformation requires a redefinition of what education entails. However, the specifics of what the future holds remain unknown.
- This integration also opens up personalized learning pathways that cater to the individual needs and pace of each student, potentially enhancing engagement and efficacy.
