Administrative Circular CACE/602

29 January 2013

**To Administrations of Member States of the ITU, Radiocommunication Sector Members,
ITU-R Associates participating in the work of Radiocommunication Study Group 6
and ITU-R Academia**

Subject: Radiocommunication Study Group 6 (Broadcasting service)
– **Proposed approval of 3 draft revised ITU-R Questions**

At the meeting of Radiocommunication Study Group 6 held from 30 to 31 October 2012, the Study Group decided to seek adoption of 3 draft revised ITU-R Questions by correspondence, according to § 3.1.2 of Resolution ITU-R 1-6.

As stated in Administrative Circular CACE/591, dated 21 November 2012, the consultation period for the adoption of the Questions ended on 21 January 2013.

The Questions have now been adopted by Study Group 6 and the approval procedure of Resolution ITU-R 1-6 § 3.1.2 is to be applied. The draft Questions are given in Annexes 1-3.

Having regard to the provisions of § 3.1.2 of Resolution ITU-R 1-6, Member States are requested to inform the Secretariat (brsgd@itu.int) by 29 March 2013, whether they approve or do not approve the proposals above.

Any Member State who objects to the approval of a draft Question is requested to inform the Director and the Chairman of the Study Group of the reasons for the objection.

After the above-mentioned deadline, the results of this consultation will be announced in an Administrative Circular and the approved Questions will be published as soon as practicable (see: <http://www.itu.int/ITU-R/go/que-rsg6/en>).

François Rancy
Director, Radiocommunication Bureau

Annexes: 3

- 3 draft revised ITU-R Questions

Distribution:

- Administrations of Member States of the ITU and Radiocommunication Sector Members participating in the work of Radiocommunication Study Group 6
- ITU-R Associates participating in the work of Radiocommunication Study Group 6
- ITU-R Academia
- Chairmen and Vice-Chairmen of Radiocommunication Study Groups and the Special Committee on Regulatory/Procedural Matters
- Chairman and Vice-Chairmen of the Conference Preparatory Meeting
- Members of the Radio Regulations Board
- Secretary-General of the ITU, Director of the Telecommunication Standardization Bureau, Director of the Telecommunication Development Bureau

Annex 1

(Document 6/73)

DRAFT REVISION OF QUESTION ITU-R 130-1/6¹

Digital interfaces for production, and post-production applications and international exchange of television programmes in for broadcasting systems

(2009-2012)

The ITU Radiocommunication Assembly,

considering

- a)* that the practical implementation of television and sound production requires definition of the details of various studio interfaces and the data streams traversing them;
- b)* that the ITU-R has image formats defined for SDTV, HDTV, LSDI and UHDTV;
- b_c)* that ITU-R has established Recommendations on digital interfaces for SDTV and HDTV, in parallel and serial forms, for electrical-coaxial and optical cables for production, post production and international exchange of television programmes;
- e_d)* that ITU-R has also established Recommendations on digital audio interfaces for production, post production and international exchange of television programmes;
- d_e)* that ITU-R has been studying video formats with higher definition than HDTV, three-dimensional television (3DTV), UHDTV and multichannel sound systems, which require higher data rate interfaces;
- e_f)* that programme content and related data can be transferred either as a continuous stream or in the form of packets;
- f_g)* that increased performance of IP networks has made it possible for broadcasters to introduce networked broadcasting systems for production and post-production inside and between broadcasting stations;
- g_h)* that networked production and post-production systems should be constructed from interoperable pieces of equipment having standardized common interfaces and control protocols;
- h_j)* that the transport mechanism should operate independently of the type of payload;

¹ In the year 2012, Radiocommunication Study Group 6 extended the completion date of studies for this Question.

jk) that specifications should cover the possibility of conveying sound or any other ancillary signals through the interface, taking into account the original source timing;

kl) that for operational and economic reasons it is desirable to investigate whether the specification should also cover the possibility to use the same interface to transport the various image formats given in ITU-R Recommendations;²

~~*l)* that digital television and sound signals produced by these interfaces may be a potential source of interference to other services and due notice must be taken of No. 4.22 of the Radio Regulations,~~

decides that the following Questions should be studied

1 What parameters are necessary to define specified digital interfaces for the ~~signal sets~~ image formats covered by ITU-R Recommendations?

2 What parameters are necessary to define compatible optical fibre digital interfaces?

3 What transport and control protocols are necessary to define interfaces for networked production and post-production systems?

4 What ancillary signals including payload identification² are required to be carried across the interfaces with the video signals, and what are the parameters necessary to define specifications for these signals?

5 ~~What provisions are required~~ technical requirements should be specified for the associated digital sound channels?

6 What are the parameters that should be specified to use the same interface to also transport the various payloads given in ITU-R Recommendations?

further decides

1 that the results of the above studies should be included in (a) Report(s) and/or Recommendation(s);

2 that the above studies should be completed by 2015.

Category: S2

² Identification of video, audio and ancillary data carried on a digital interface or individual links.

Annex 2

(Document 6/82)

DRAFT REVISION OF QUESTION ITU-R 133/6

Enhancements of digital terrestrial television broadcasting

(2010)

The ITU Radiocommunication Assembly,

considering

- a) that terrestrial television broadcasting undergoes the transition from analogue to digital emission;
- b) that digital emission can provide opportunities for enhancements of broadcasting, including:
 - HDTV;
 - digital three-dimensional (3D) TV broadcasting;
 - broadcasting portable reception;
 - broadcasting mobile reception;
 - high bit-rate data broadcasting;
 - multimedia broadcasting;
 - interactive broadcasting;
- c) that there is considerable interest in maximizing the efficiency of the digital terrestrial television broadcasting;
- d) that there is considerable progress in development of compression techniques for digital television;
- e) that future integrated/hybrid systems may allow complementary terrestrial broadcasting with other methods of broadcast content delivery.

decides that the following Questions should be studied

- 1 What are the anticipated future developments in terrestrial television broadcasting technology following the transition to digital broadcasting?
- 2 What are the future requirements for digital terrestrial television broadcasting technologies?
- 3 What efficiencies will be achieved by the enhancements of broadcasting?
- 4 What possibilities may the broadcast content delivery in future integrated/hybrid systems offer, in addition to terrestrial broadcasting?¹

¹ This Question should be brought to the attention of ITU-R Study Group 5 and ITU-T Study Group 9.

further decides

- 1 that the results of the above studies should be included in (a) Report(s) and/or Recommendation(s);
- 2 the above studies should be completed by 2015.

DRAFT REVISION OF QUESTION ITU-R 136/6^{1,2}

Worldwide broadcasting roaming^{3,4}

(2012)

The ITU Radiocommunication Assembly,

considering

- a) that there is an increasing demand to use portable broadcast receivers worldwide (worldwide roaming);
- b) that the service requirements for digital sound broadcasting systems in different bands have been developed and adopted in ITU-R (Recommendation ITU-R BS.1348 for the bands below 30 MHz; Recommendation ITU-R BS.774 for VHF/UHF bands);
- c) that the requirements for enhanced multimedia services for digital terrestrial broadcasting in VHF bands I and II have been developed and adopted in ITU-R (Recommendation ITU-R BS.1892);
- d) that various digital sound broadcasting systems for fixed and mobile reception and their parameters are described in ITU-R Recommendations and Reports (Recommendations ITU-R BS.1514, ITU-R BS.1615, Reports ITU-R BS.2004, ITU-R BS.2144 for the bands below 30 MHz; Recommendations ITU-R BS.1114, ITU-R BS.1660, Reports ITU-R BS.1203, ITU-R BS.2208, ITU-R BS.2214 for VHF/UHF bands);
- e) that various digital multimedia broadcasting systems for fixed and mobile reception and their parameters are described in ITU-R Recommendations and Reports (Recommendations ITU-R BT.1833, ITU-R BT.2016, Report ITU-R BT.2049, ~~draft new Recommendation ITU-R BT-[ETMM]~~);
- f) that various digital terrestrial television broadcasting systems are described in ITU-R Recommendations and Reports (Recommendations ITU-R BT.709, ITU-R BT.1306, ITU-R BT.1877, Reports ITU-R BT.2140, ITU-R BT.2142, ITU-R BT.1543, etc.);

¹ This Question should be brought to the attention of ITU-R Study Groups 4, 5 and ITU-T Study Groups 9, 17 as well as to IEC.

² Radiocommunication Study Group 6 made editorial amendments to this Question in 2012 in accordance with Resolution ITU-R 1.

³ The definition of the term “roaming” for IMT-2000 is set in Recommendation ITU-R M.1224: the ability of a user to access wireless telecommunication services in areas other than the one(s) where the user is subscribed.

⁴ The term “worldwide broadcasting roaming” is proposed for the reception, by a single receiver, of TV, sound and multimedia broadcasting being serviced-provided in respective different areas in ~~of the world by a single receiver~~.

- g) that various digital satellite sound and television broadcasting systems are described in ITU-R Recommendations (Recommendations ITU-R BO.1130, ITU-R BO.1516, ITU-R BO.1724, ITU-R BO.1784);
- h) that a set of ITU-R Recommendations invite the ITU membership and radio receiver manufacturers to study the possibility of the development of multiband, multistandard radio receivers (Recommendations ITU-R BS.774, ITU-R BS.1114, ITU-R BS.1348);
- j) that the implementation of various versions of interactivity in TV and radio broadcasting systems including use of Internet are described in ITU-R Recommendations (Recommendations ITU-R BT.1508, ITU-R BT.1564, ITU-R BT.1667, ITU-R BT.1832, etc.);
- k) that software-defined radio (SDR) is under study in ITU;
- l) that modern digital broadcasting receivers are increasingly based on loaded software or firmware that may be subject to updating;
- m) that modern broadcast receivers are often equipped with an interface that allows the additional connection to the Internet (for, e.g., interactivity and downloads);
- n) that methods of broadcast content delivery via future interactive and existing systems, as found in, for example, Recommendation ITU-R BT.1833 are in progress in addition to terrestrial broadcasting;
- ~~no~~) that worldwide broadcasting roaming may facilitate the regional, national and international harmonization of broadcasting;
- ~~op~~) that worldwide broadcasting roaming offers the possibility of intersystem interoperability for information services in disaster and emergency situations, navigation, safety, etc.,

decides that the following Questions should be studied

- 1 What are the service requirements and features for worldwide broadcasting roaming?
- 2 What are the system requirements (basic characteristics and performances) that need to be fulfilled in order to realise worldwide broadcasting roaming?
- 3 What are the technical characteristics of broadcast receivers including elements of SDR and its enhancements that may be used for implementation of worldwide broadcasting roaming?

further decides

- 1 that the results of the above studies should be included in (a) Report(s) and/or Recommendation(s);
- 2 that the above studies should be completed by 2015.
