# Annex 2

# Titles and summaries of the draft Recommendations proposed for adoption at the Study Group 4 meeting

#### Draft new Recommendation ITU-R BO.[UHDTV TRANSMISSION]

# Transmission system for UHDTV satellite broadcasting

Doc. <u>4/7</u>

Doc. 4/8

UHDTV broadcasting requires transmission capacity that goes beyond conventional HDTV broadcasting. This Recommendation defines a transmission system for UHDTV satellite broadcasting.

#### Draft revision of Recommendation ITU-R BO.1784

# Digital satellite broadcasting system with flexible configuration (television, sound and data)

The aim of this revision is to add DVB-S2X specifications.

DVB-S2X is an extension of the DVB-S2 specification, as described in Recommendation ITU-R BO.1784, for satellite broadband applications and provides additional technologies and features. It uses the proven and powerful low-density parity check (LDPC) forward error correction (FEC) scheme in combination with Bose-Chaudhuri-Hochquenghem (BCH) FEC as outer code and introduces the following additional elements:

- Smaller roll-off options of 5% and 10% (in addition to 20%, 25% and 35% in DVB-S2).
- A finer gradation and extension of number of modulation and coding modes.
- New constellation options for linear and non-linear channels.
- Additional scrambling options for critical co-channel interference situations.
- Channel bonding over up to 3 channels.
- Very low SNR operation support down to -10 dB SNR.
- Super-frame option.
