Draft new Recommendation ITU-R SM.[CEF] (Doc. 1/127(Rev.1))

Doc. 1/BL/18

Standard data exchange format for frequency band registrations and measurements at monitoring stations

A general data exchange format should be as simple as possible, no “packing material” of any kind should be used around the data. The file format should also have a long lifespan. This is the reason that plain ASCII is chosen for the file format.

An effective merge or comparing of data requires that data to be generated in such a way that essential elements of the data have a common base. Therefore the Recommendation also contains some items to be agreed on before starting a measurement campaign.
