## E.212 Mobile country code (MCC) (Recommendation ITU-T E.212)

### Note from TSB

The TSB has been informed of a patent that apparently involves the use of unassigned E.212 Mobile Country Codes (MCCs). The patent was filed with the World International Property Organization on 6 April 2005, as number PCT/EP2005/003612. The patent apparently calls for the use of E.212 MCC codes comprised between 800 and 899 or between 902 and 999. Those reserved or unused values may be assigned in the future either to countries that require additional MCCs or for global applications. Subsequent assignments of these spare E.212 resources could create confusion and operational problems for networks that use MCC codes, in particular mobile networks based on GSM. The patent in question is contained in ITU-T Study Group 2 TD 45 (WP 1/2). TSB Circular 87 brings the matter to the attention of the membership and invites the membership to submit contributions to ITU-T Study Group 2 regarding any concerns that they might have regarding implementation of the use of numbering resources proposed in the patent and regarding solutions to meet any requirements that are implicitly raised in the patent. Please consult that Circular for further details.

## **National Numbering Plan (According to ITU-T Recommendation E.129 (09/2002))**

Web:[www.itu.int/itu-t/inr/nnp/index.html](http://www.itu.int/itu-t/inr/nnp/index.html)

Administrations are requested to notify ITU about their national numbering plan changes, or to give an explanation on their webpage concerning the national numbering plan as well as their contact points, so that the information, which will be made available freely to all administrations/ROAs and service providers, can be posted on the ITU-T website.

For their numbering website, or when sending their information to ITU/TSB (e-mail: [tsbtson@itu.int](mailto:tsbtson@itu.int)), administrations are kindly requested to use the format as explained in Recommendation ITU-T E.129. They are reminded that they will be responsible for the timely update of this information.

From 15.II.2010 to 28.II.2010 the following countries have updated their national numbering plan on our site:

PREFIX, NATIONAL (TRUNK) PREFIX AND  
NATIONAL (SIGNIFICANT) NUMBER) (IN  
ACCORDANCE WITH ITU-T  
RECOMMENDATION E.164 (02/2005))**

(POSITION ON 1 MARCH 2010)

---

**Geneva, 2010**

## Note from TSB

1. This List of "Dialling Procedures" replaces the previous one published as an annex to the ITU Operational Bulletin No. 905 of 1.IV.2008. The present list recapitulates all the different amendments that have been published up to Operational Bulletin No. 951 of 1.III.2010.

2. The list of "**Dialling Procedures**" contains the national (trunk) prefix, the international prefix, the country code and the national (significant) number in accordance with ITU-T Recommendation E.164 (02/2005).

3. The **national (trunk) prefix** is the digit, or combination of digits, which must be dialled before an area (city) code when dialling a call to a subscriber from inside his own country but outside his own numbering area. It provides access to the automatic outgoing trunk equipment. If the entry in this column is blank for a particular country, it means that the country has a single nationwide numbering plan that does not use area codes, and all calls to anywhere in the country are dialled by using the entire local number.

Accordingly, in the international service the trunk prefix of the country of destination must not be dialled. ITU-T recommends that the Administrations of countries which have not yet adopted a trunk prefix or are revising the prefix for access to their national trunk network should adopt a prefix composed of a single digit, preferably "0".

4. The **international prefix** is the digit, or combination of digits, that must be dialled before a country code when dialling a call to a country other than the one from which the call is being placed. If the entry in this column is blank for a particular country, it means that the country does not have direct dialling facilities to other countries (in other words, international calls must be placed through the assistance of an operator).

ITU-T recommends that the Administrations of countries that have not yet introduced automatic international operation or are, for various reasons, revising their numbering plans, should adopt an international prefix (a code for access to the international automatic network) composed of the two digits "00".

5. The **country code** is composed of one digit or is the combination of two or three digits, characterizing the called country which is used to route calls to the required country. It is usually dialled after the international prefix. The List of country codes is also published in the "List of ITU-T Recommendation E.164 assigned country codes", as an annex to the Operational Bulletin.

6. The **national (significant) number** is the number to be dialled following the national (trunk) prefix to obtain a subscriber in the same country but in a different local network or numbering area. The national (significant) number consists of the area code followed by the subscriber number. If the entry in this column is blank for a particular country, it means that the information is missing.

7. For your information, the present List is published as an annex to the ITU Operational Bulletin. Furthermore, the information it contains is also available on the ITU website [www.itu.int/itu-t/bulletin/annex.html](http://www.itu.int/itu-t/bulletin/annex.html).

8. Every effort has been made to ensure that the information contained in this Annex is accurate. Administrations are requested to notify all modifications or missing information concerning their national (trunk) prefix, international prefix and the length of their national (significant) number by using the attached form.

9. The designations employed and the presentation of material in this List do not imply the expression of any opinion whatsoever on the part of the ITU concerning the legal status of any country or geographical area, or of its authorities.
