Title: Location Issue: support decentralization

Abstract:

Is it time to finally remove the location of the most important institution concerning the telecommunications (IUT) all over the world? Will this proposal lead to further develop of this domain?

Discussion:

It will be more profitable in terms of responding, in a more efficient way, to its member's obligations and requirements that the location of the Global Telecommunication Organization should be decentralized.

Discussion:

In this case it will be more beneficial to change, one periodically, places to conclude the meetings of the organization and that for all its active states members. It can therefore expect to benefit from this decentralization, in a fair way, even universities students and telecommunications institutes.

Conclusion:

But of course we will have to carefully study this solution with respect to numerous expenses: participants and their families travel expenses, their accommodations and guarantee an adequate seat everytime these meetings are made.
