

## WELCOME ADDRESS

On behalf of HMRITM welcome to Delhi . It is a great pleasure for HMRITM to host in our premises the ITU workshop on Standards and Intellectual Property Rights (IPR) issues we have amongst us about 100 participants from 40 various countries to deliberate on this very important subject. The event mainly emphasizes on the issue; such as future research & product developments that can find a place in the global market, product standardization/ IPR issues.

In live with our philosophy so far, our goal for today's event - is to bring all experts around the same table and discuss the possibilities of collaboration towards the next generation in the field of communication.

Educators are entrusted with the duty of promoting and protecting our rich heritage, besides educating our young students. Before the genesis of our Institution, I asked myself some pertinent questions like—Do our students enjoy coming to Institute? Do our curricular and co-curricular entities give them an adequate platform? Have our class room teaching practices kept with the recent advances in pedagogical theory and practice? The answer to all of these and many more is the initiative to embark upon Institute the best one to serve as model for the educational development of our Nation. The need of the hour is to provide an educational system which amalgamates the aspirations of the present generation, without distorting our value system, and by striking equilibrium between the modern and the context of course outlook.

Our motto of HMRITM is to transform the students into confident, effective and responsible leaders who have prepared themselves to face the modern tough challenges.

Nurturing the silent desire to add meaning to every degree of my life and rendering to the call of humanity, my sincere endeavor has been to identify the 'best' in each student.

Which eventually provide a study platform enabling him to launch his journey of his precious dreams. The aim of education is to train the mind into a living fountain and not a reservoir. At HMRITM, it is our unwavering effort to develop in students valuable life skills and to help them become independent resilient and confident individuals, who at the same time do not lose touch with traditional values system.

Thus, HMRITM helps to develop learners who are confident, responsible, innovative and engaged in learner's gain. Institute qualifications which are valued by world wide, and act as a clear passport for progression and success to them.

Our Institute is continuously challenged to prove that their programmes meet strict criteria and motivate students to excel in their subject. Students are encouraged to read widely to question and analyse what they read and to discuss their ideas and opinions in their presentations, seminars and tutorials due to this practice, the benefit of this can be related to the big picture of our Institute intellectual success where creative and analytical ability is essential to progress and problem solving. Those skills are encouraged and developed by the style of teaching in the Institute e.g small group Presentation are initial aspect of full time degree courses as they provide important intellectual contact between student and teacher which simulates original thinking.

Our next generation of business, political and bureaucratic leaders and managers will be confronted with security related situations more frequently . But our education, awareness and planning system do not factor their security implication. Ignorance of this symbiotic relationship may be the biggest security risk that our nation faces.

By now several studies have indicated the positive impact of technology growth on economy , which has attracted increasing government attention to adopt policies that would enable them to leap frog in the information age as the as the importance of newer technology increased, so did the need to adopt the underlying standards and measurement parameters.

The appropriate measurement parameters, standards or indicators can be the very critical measures to facilitate or simulate the countries in different development phases for their goals ranging from eradicating poverty, boosting their industry, to spurring their socio-economic growth .

At the same time, a number of challenges relating to the right choice of indicators, its interpretation, methodologies, definition issues and variation in measurement procedure still need to improved upon, therefore , I hope you all- partners and participants--to tackle such challenges through this workshop based on the previous experiences while facilitating skills transfer and capability building.

Despite of all, I would like to welcome all the distinguished delegates and for making the commitment to join the program and make it a success.

I wish you all a very productive workshop. During the workshop if you have any requirements, please feel free to contact our faculty/ Staff , who would be very happy to assist you

Thank You
