Learning in a post-COVID world: How can emerging technologies help achieve universal access to quality education?

Friday, 9 July 2021 14:00-15:00 (CEST)

Connect2Recover

Building back better with broadband

Sameer Sharma

Senior Advisor

International Telecommunication Union

COVID-19 has caused unprecedented disruption in countries around the world and has highlighted the urgency for universal digital connectivity.

- **Education:** **2.2 billion children and young people unconnected** and as COVID-19 has spread across the globe, most countries announced temporary closure of schools, **impacting 91% students worldwide** – around **1.6 billion** children and young people.
- **Jobs:** Unprecedented global employment **losses in 2020 of 114 million jobs**, higher for women (5 %) than for men, and for young workers (8.7%).
- **Healthcare:** Confirmed COVID-19 cases worldwide surpassed **165 million, with over 3.4 million deaths**. Focus on continued availability of health services during movement restrictions , other social and public health measures to contain the spread of COVID-19.
- **Fixed Broadband:** The econometric models published in the 2020 study made by ITU has proven that **fixed broadband had a higher economic impact for developed countries** (countries with GDP per capita higher than USD 22000 and countries with GDP per capita between USD 12000 and USD 22000).
- **Mobile Broadband:** The 2020 study has proven that in **countries with low fixed broadband penetration mobile broadband technology has taken over in becoming the pre-eminent technology driving economic growth.**
- n (countries that have a low GDP per capita),

Connect2Recover

Building back better with broadband

Education

Objective

To reinforce and strengthen the **digital infrastructure and digital ecosystems** of beneficiary countries as they adjust in the wake of COVID-19

Healthcare

Key Outputs

Country internet resilience assessment including identifying the gaps and bottlenecks in the effective use of digital networks and technologies

National ICT strategy, policy, and regulatory recommendations to support recovery efforts and the “new normal”

Projects to implement specific solutions in line with Connect2Recover recommendations

Jobs

Regions

Africa
Arab States
Americas
Asia-Pacific
CIS
Europe

* Priority to **LDC, LLDC, SIDS** countries

Founding Partners

- **Global Methodology**: A methodology to assess gaps and **bottlenecks at a country level** for the utilization of networks and digital technologies **and identify policies to respond to and mitigate the consequences of COVID-19** pandemic and preparedness for any future disasters.
- **Country Landscape Assessments**: Conduct country-level **Digital and Internet resilience assessment**
- **National ICT Strategies**: Based on the Internet Resilience assessments, develop and implement comprehensive **ICT strategies to ensure that digital infrastructure and ecosystems adequately support recovery efforts** as well as the 'new normal', in line with global best practices
- **Pilot Activities**: Partner with other programs and organizations to implement pilot activities that **test specific technological solutions** in line with national country strategies and policies, with a particular **focus on education, health, and job creation**. These pilots can also be used to inform policy making.
- **Deep-Dive Studies**: Undertake deep-dive studies in specific areas of digital policy as prioritized by the countries selected (*e.g.*, in areas such as **e-education, e-health and job creation**).

Methodology for Identifying Connectivity Gaps and Strengthening Resilience in the New Normal

Key Phase One Findings – Data, Resiliency and Policy

- The **quality of available broadband data is incomplete** overall and is worst in the places where it's needed the most.
- The ITU is in a unique position to convene various stakeholders to develop **new data collection methodologies and visualizations, such as coverage maps.**
- The pandemic has taught us that a **country's broadband network cannot be viewed as resilient** if significant portions of its **population cannot access the internet at home.**
- To be better prepared for the new normal and for future disasters, governments and regulators should consider refreshing and **renewing their national broadband plans.**
- Governments and regulators can use the national broadband planning process to **collect trustworthy sources of data to carry out gap analyses, increase network redundancy and resiliency, help close digital divides,** and be prepared to move quickly should future natural and manmade disasters occur.

Phase Two Country Landscape Assessments

We will work with participating Member States to assess their . . .

Data Collection
Practices

Resilience of . . .
Country
Network Operators
Critical Infrastructure
Market

National Digital
Strategy

We will focus on three keys to post COVID-19 recovery . . .

Education*

Jobs

Healthcare

A. Country-Level Implementation:

- Connect2Recover is supporting Giga Initiative in providing funds to **connect 10 schools in Rwanda.**
- Project “**TECH in the Community**”: Provide ICT Connectivity to disadvantaged communities in **Haiti** to introduce **digital literacy, access and skills in ICTs.**
- **Armenia and Kazakhstan** have now joined the Connect2Recover initiative as beneficiary countries
- Assessment for **OECS countries in Americas region**
- **Broadband transmission map** in Arab region
- Discussions underway with regions for suitable countries with focus in Africa.

B. Emerging Technologies

- Promoting deployment of innovative technologies / solution including Satellite, IMT, OFC, community wifi / radio, MW for access and backhaul while use of AI/ML etc. for sustained learning for enhancing digital skills

Technologies to map schools and their connectivity

projectconnect.world

Mapping school connectivity globally.

Project Connect aims to map real-time connectivity of every school in the world. This will serve as a foundation to work with governments and service providers to connect every school to the Internet.

A PROTOTYPE COUNTRY

In Brazil, school internet speeds are reported every 4 hours, holding providers **accountable** and **measuring impact**

- Giga has developed a browser extension for connected schools to measure speed in real-time
- This data can be linked to procurement roll-out and operating expenses – “no internet, no service fee”

EMERGING MOBILE TECHNOLOGIES TO FACILITATE DIGITAL TRANSFORMATION IN PACIFIC ISLANDS

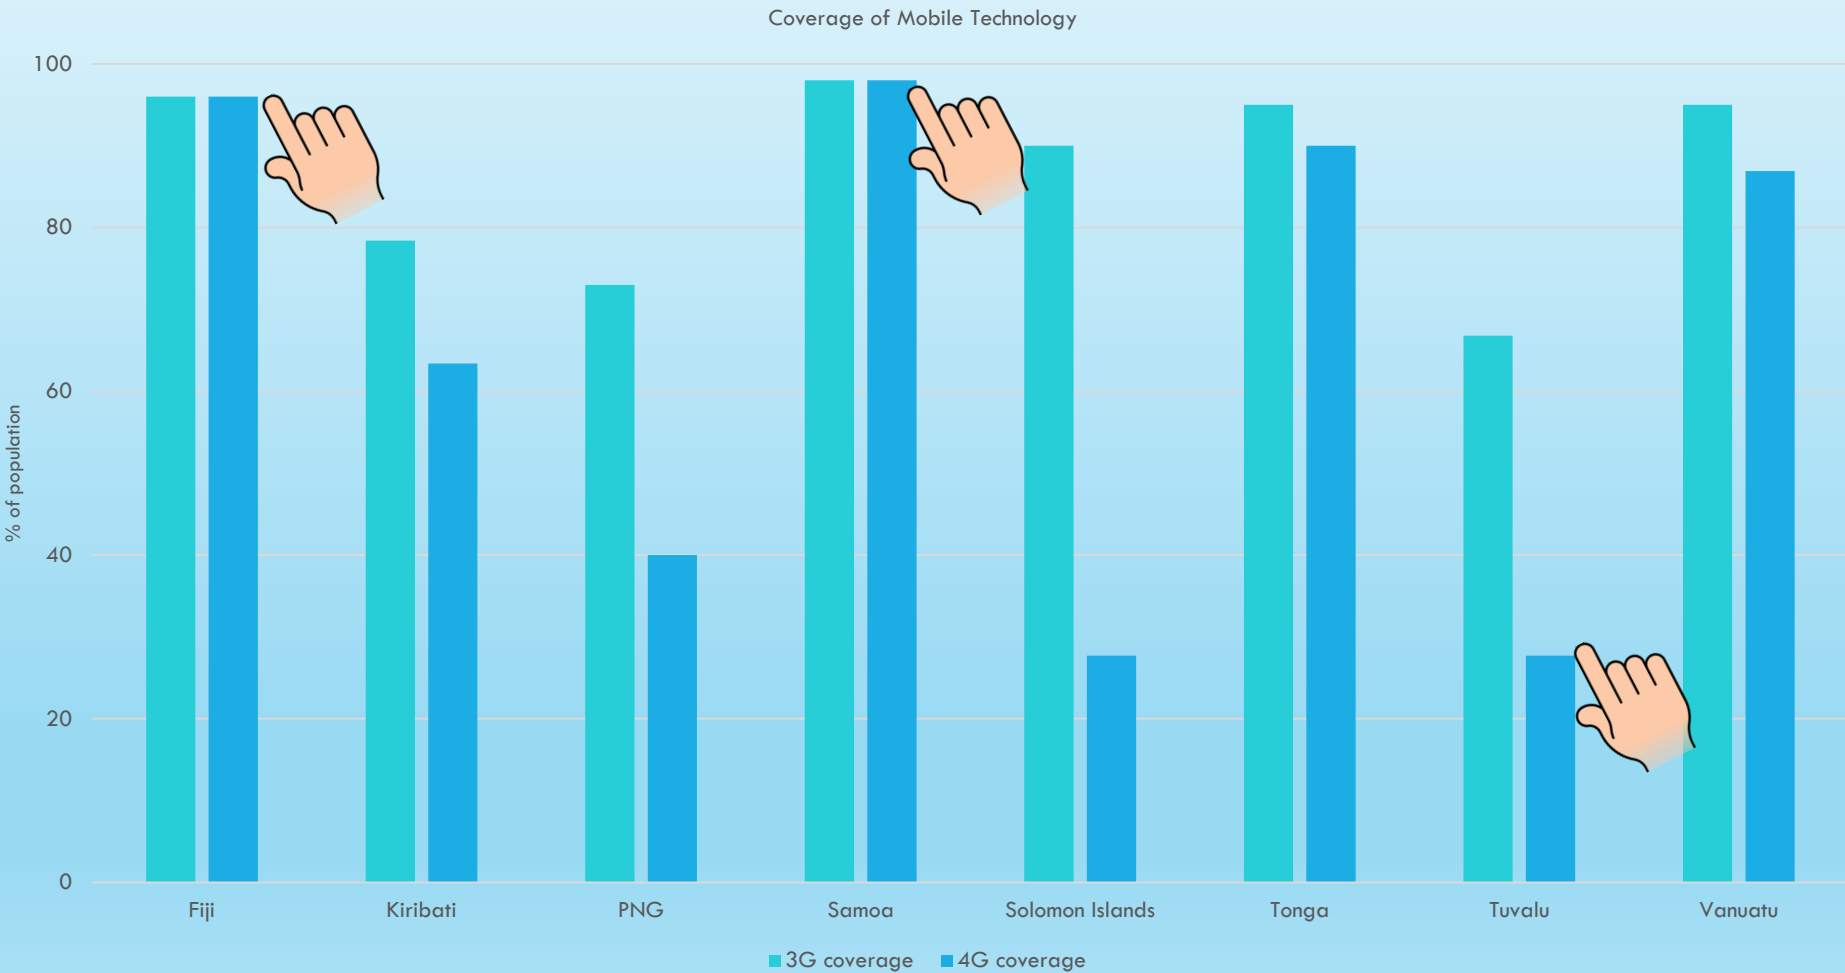

AFFORDABLE AND RELIABLE CONNECTIVITY AS A PRE-REQUISITE FOR THE DIGITAL TRANSFORMATION

- Accelerating to digital economy and society, and associated service delivery platforms, requires more **affordable and reliable connectivity**
- Key Drivers of Growth
 - Government to adopt digitalization agenda to increase demand, improve access and affordability
 - User Appetite and preference
- Challenges to consider
 - International bandwidth capacity and costs
 - Small markets
 - Satellite connectivity
 - Cybersecurity
 - Sustainability

HIGH INTERNET COSTS LEAD TO LOW PENETRATION. DESPITE CONSIDERABLE IMPROVEMENTS IN INTERNET CONNECTIVITY, INTERNET IN THE REGION IS NOT AFFORDABLE IN ALL COUNTRIES. CLEARLY MOBILE BROADBAND OFFERS THE MOST AFFORDABLE SOLUTIONS FOR MAJORITY OF THE COUNTRIES IN THE REGION.

DESPITE THE CHALLENGING NATURAL ENVIRONMENT, MOBILE INTERNET IS AVAILABLE IN MOST PICS. 4G/LTE COVERAGE HAS BEEN ESTABLISHED AS THE DOMINANT MOBILE IN TECHNOLOGY IN FIJI, AND HAS NOW STARTED TO MAKE INROADS IN SEVERAL MARKETS SUCH AS VANUATU, SAMOA, AND TONGA.

Source: GSMA, 2020

DIGITAL INNOVATIONS INCREASINGLY BEING ADOPTED IN THE PACIFIC

USE OF DIGITAL TECHNOLOGIES IN RESPONSE TO THE PANDEMIC

- Vaccination registration and administration
- Online dashboard of active cases and locations of hotspots
- Government assistance- social transfer payments, distribution of ration
- Business continuity- application of passes, increasing online presence

Growing in usage

- Financial Services- Mobile Money Wallet, Internet Banking and Remittances
- eGovernment applications
- eCommerce and use of Online marketplace, including using social media for exchange of goods and services

The future for the region

- Reducing international connectivity gap either through use of submarine cables and/or satellites
- Universal access- Connecting the unconnected to increase market size and demand
- Growing use of cloud technologies, eGovernment and the digital economy
- Use of shared services to increase efficiency and reduce costs

Country operating models for school connectivity

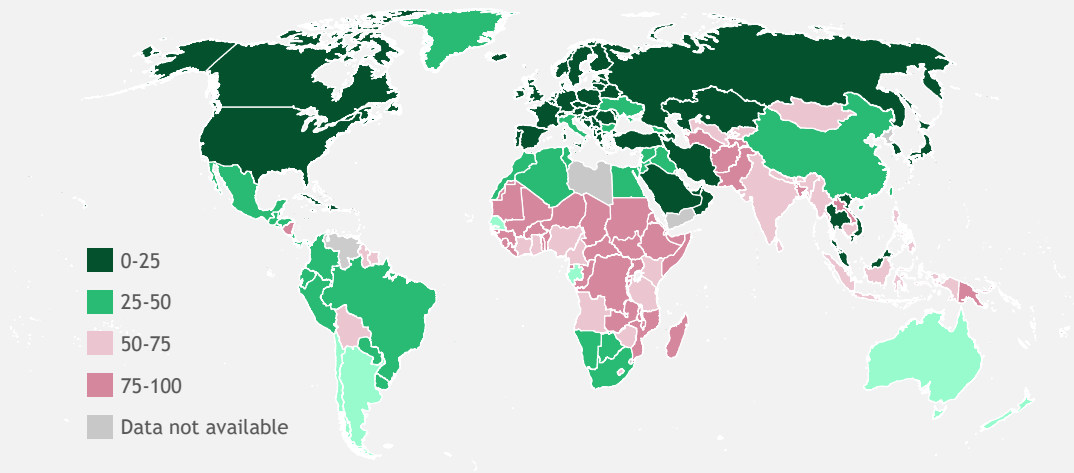

ITU Webinars - Emerging technology for connectivity

FRIDAY, JULY 9

The challenge | Large part of world not connected to Internet, which is also reflected in school connectivity

Large percentage of population with no access to the internet globally...

...which is reflected in school connectivity and needs to be tackled in a sustainable matter

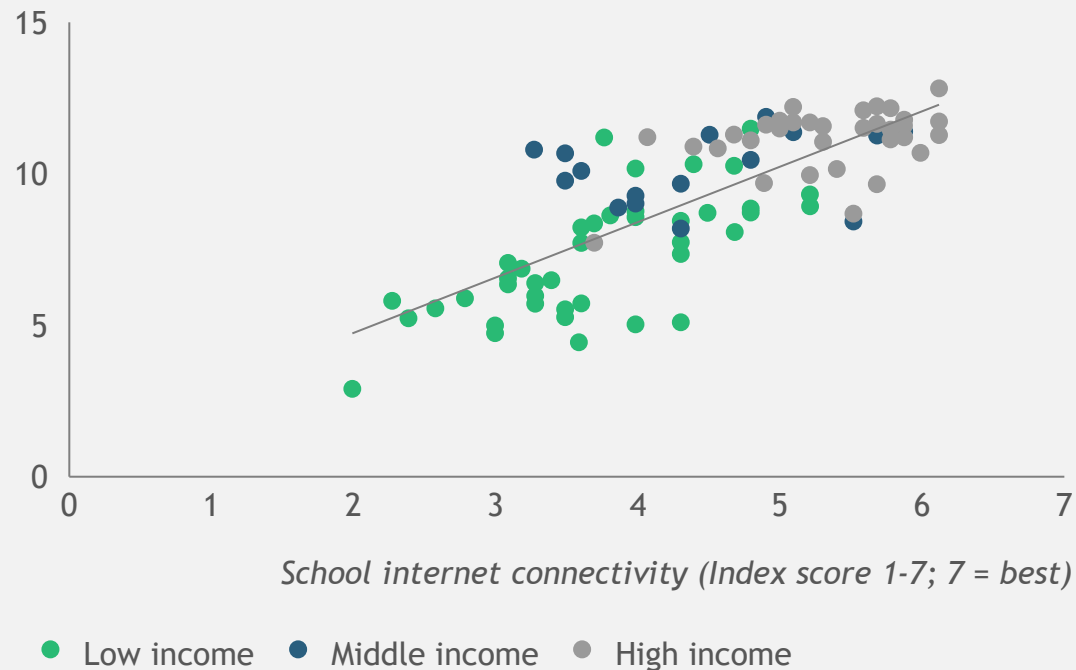

Connectivity distribution (%)

The challenge | School connectivity & education quality correlated, and linked to improved country economics

The relationship between school internet connectivity and education quality is clear...

Education quality
(learning-adjusted years of schooling)

...and has been proven to lead to an increase in developing country's GDP

- **Individual level:** individuals can **find and keep employment** and earn more over their lifetime
- **Country-level:** More skilled & productive labor force is created. Leads to an **increase in GDP**, increased consumer spending, increased number of jobs, and increased economic development
 - Schools can enable benefits not only for the students, but also for the wider community - **school serves as hub for connectivity**
- Increasing education therefore allows for **closing the gap** between developing and developed countries
- This positive reinforcing cycle only works if students receive good quality education uninterrupted. In order to achieve this, **sustainable business models to connect schools are required**

Sustainable business model influenced by technology, operational set-up, funding structure, and financials

Deep-dives on following slides

Technology

- Desired internet speed
- Infrastructure options & considerations

Financials

- Key determinants of costs
- OpEx
- CapEx

Funding structure

- Funding model
- Sustainable funding sources
- Government input
- Evolved funding

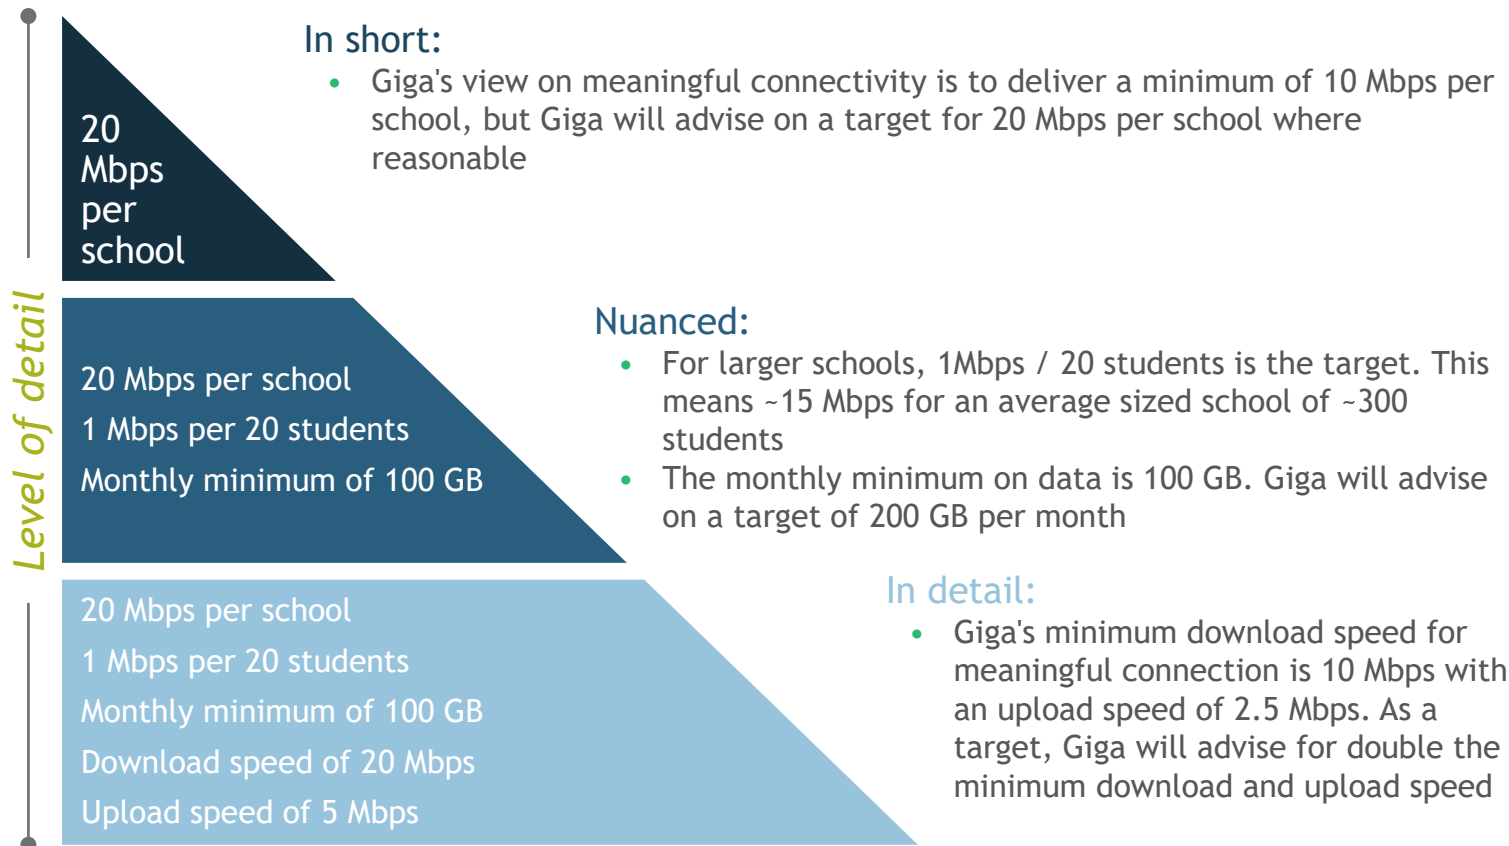

Operational set-up

- Setup to execute, build, operate, maintain
- Role MNO & gov't
- Mgmt. options

Technology | Minimum target set to reach meaningful connectivity, which has implications on the technology that can be used

Giga has set a minimum target for meaningful connectivity...

2024 target

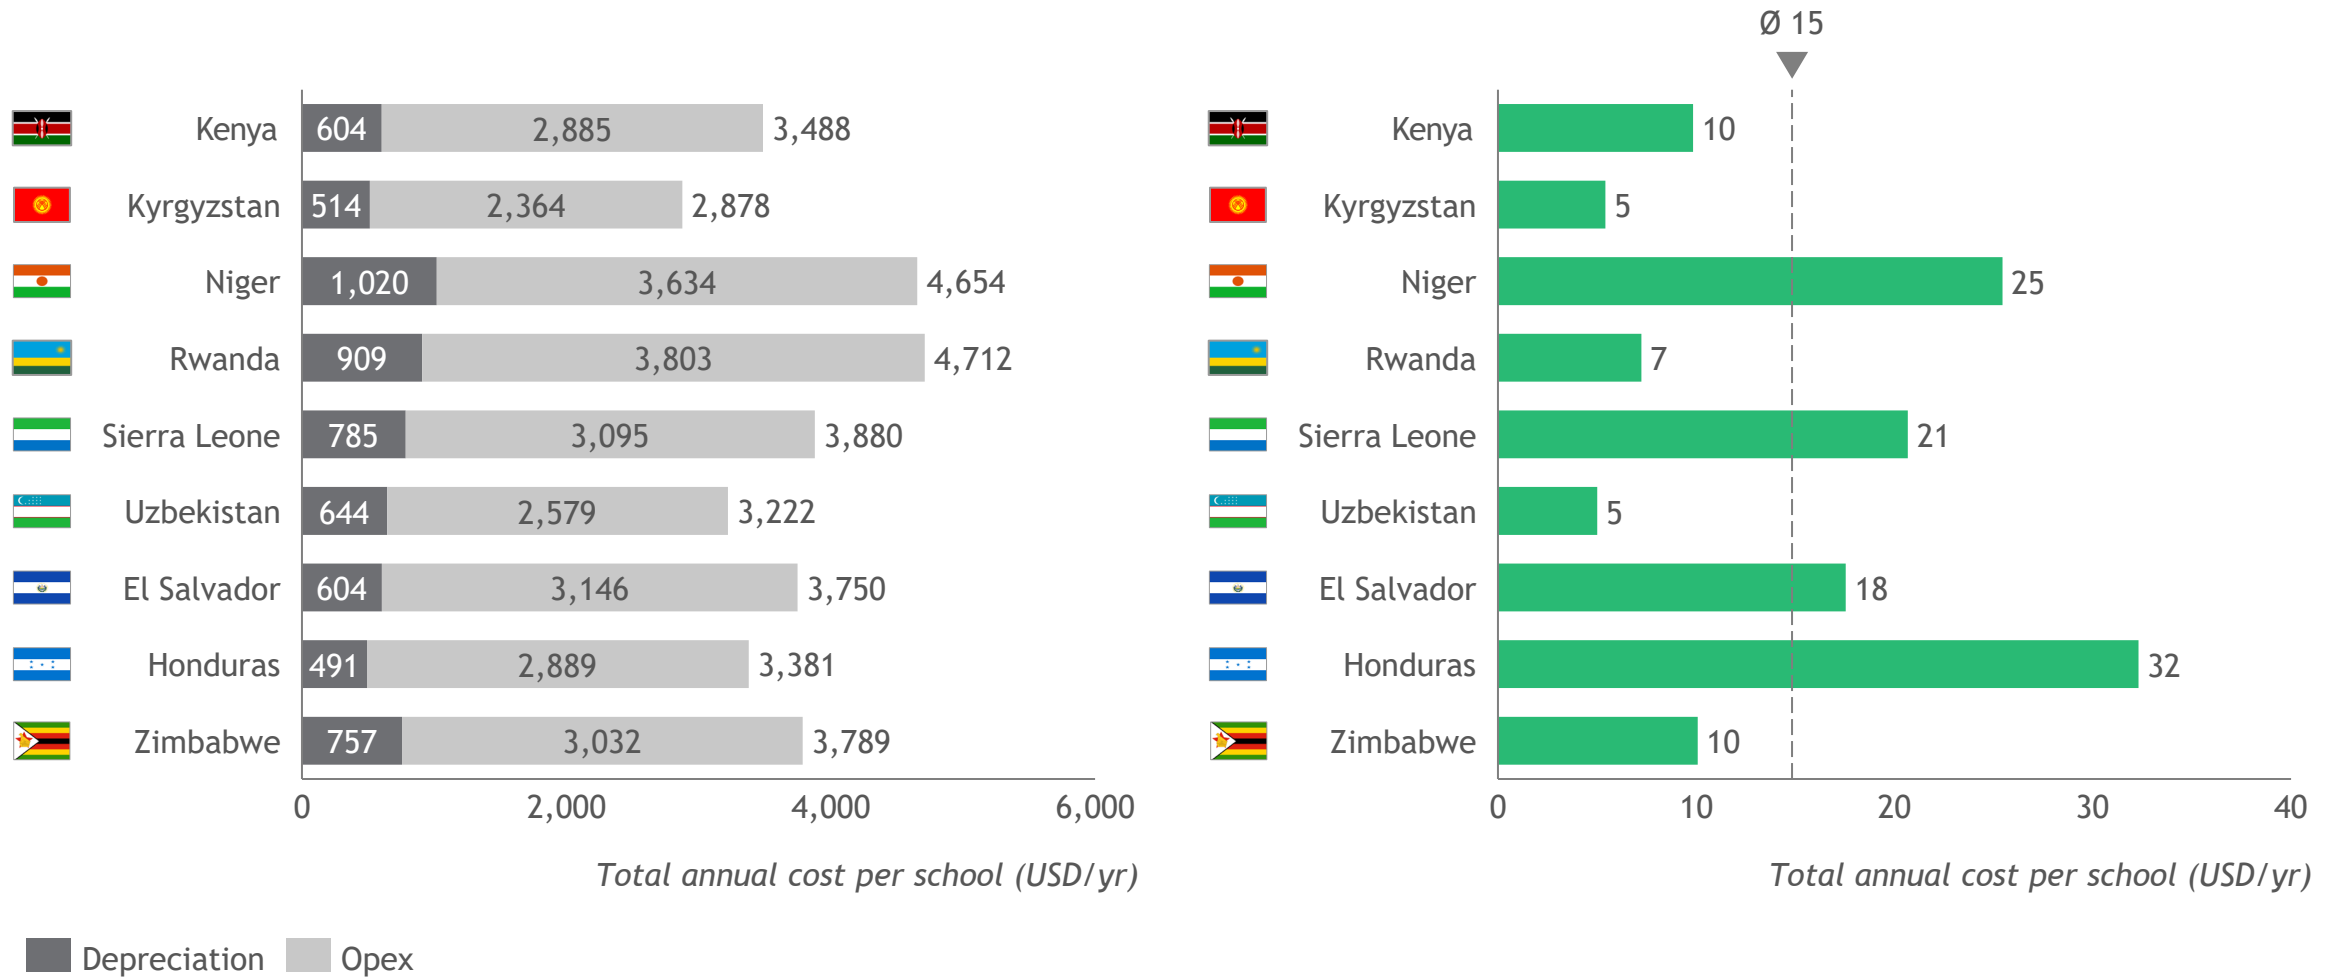

...which translates into certain technology options

Technology	Suitability
2G	✗
3G	✗
4G	✓
WISP	✓
Fiber	✓
Satellite	✓

Source: Methodology of Education Superhighway: Equivalent organization to Giga in the USA, industry expert interviews, Giga team, BCG experience re. technology capabilities. Notes: Satellite may be challenged for video-enabled due to cost for traffic. WISP will only work for Hybrid-ready for smaller schools/communities with up to ~300 students.

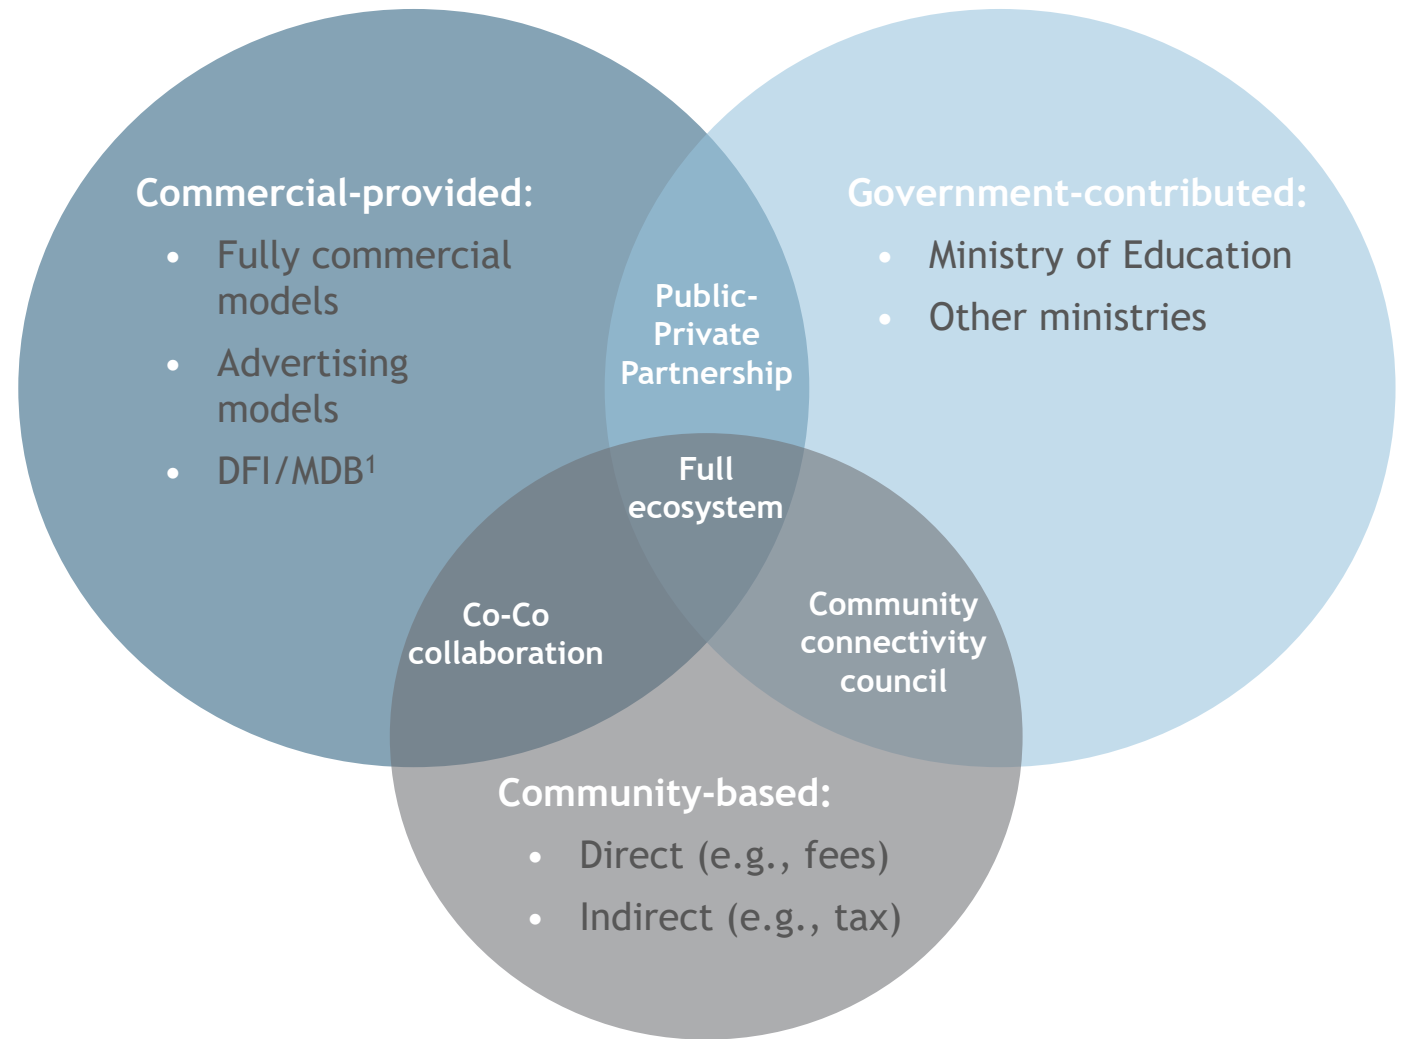

Financials | Required revenues would need to be between 5 and 30 USD per year per student

Source: ACTUAL model; Note: depreciation assumed 4 year for equipment and 20 years for fiber; modelling in process of further refinement

Funding | Seven country archetypes arise based on funding opportunities

3 primary archetypes and 4 secondary archetypes

1. Development finance institution (DFI) and Multilateral development bank (MDB), e.g., World Bank, African Development Bank, etc.

Operational set-up | Different archetypes lead to different ideal operating set-ups, with private sector involvement increasing financial performance

Private-focused

Public Private Partnership

Private company / consortium

Concession

Lease

Turnkey

Contract

State / government

Government-focused

- Management that's mostly private-focused has proven in practice to be **most efficient with faster times to roll-out and healthier financial statements**
- Contrarily, government/state-owned management options have proven to be **difficult in practice, with operational, financial, and commercial risks carried by the government**
 - There are several examples of state-owned management solutions that have turned out to be difficult to implement in practice, e.g. Gambia ECOWAN, Senegal ADIE, Lithuanian RAIN, and Oman Broadband Company
