DIGITAL VILLAGE

Digital Empowerment Foundation has been working for a decade to make underserved rural communities have access to equitable information. By making use of digital tools like wireless technology, mobile phones, computers and other ICT tools, DEF creates an ecosystem of digital villages with access to tele-health services, digital panchayats, information kiosks, rural tourism and schools with digital labs, among others.

Health centres, sub-health centres and health workers are enabled to search for health-related information

Connects SHGS, anganwadi workers and women
