

Ramesh Chandra

Vice President – Network Planning & Engineering

Reliance Jio Infocomm Limited, Mumbai

Brief Profile:

Ramesh Chandra, a seasoned Telecom professional in driving various strategic, design, engineering and operational profiles in Telecom industry for last 30 years. He has been responsible for new product & technology selections, improvement in network design and Architecture for delivering best in class services to customers. He has also led industry initiatives with regulator & licensor for stream lining various policies and compliances. His passion on working with OEMs and support from Technology partners made Jio a largest carrier of IPv6 globally.

Presentation Abstract:

Jio has been driving digital India initiatives to make information available to last person in socio-economic value system and bridge the digital divide in country. Clear IPv6 strategy in technology selection, development of applications and flawless execution has created benchmark in industry by deploying IPv6 based network infrastructure and carrying highest number of subscribers on IPv6. Jio believe in development of end to end eco system starts from devices, network infrastructure, applications, private & public Content Delivery Network. Close working with technology vendors has not only helped in resolving product issues but created new transition solutions from dual stack to IPv6-only. This session shall explain Jio's initiatives, deployment approach, learnings and new developments required for Telecom sector.
