

Arab Regional Assessment Overview of the Enabling Environment for Big Data

Nasser Kettani
ITU Consultant

nasser@kettani-digital.com

Version 2 - 27-août-19

Agenda

Relevance of this Work

Structure of the Work

Findings

Recommendations

Data is the essence of Digital Transformation

Digital Transformation is impacting companies and public institutions in every industry and every sector, although not necessarily evenly across the world.

To fuel this transformation, institutions are utilizing big data and AI, they are capturing and processing more and more data across their various experiences: customers, partners, employees, business processes, connected objects and from various other external sources.

Why an ITU Overview for the Arab Region ?

Learn the current
environment

Frame the discussion

Promote (awareness on
opportunities and challenges)

Help – focus the needed
support

Methodology

Expert Advise

Desk Research

[Survey, online
questionnaire]

Structure of the Report

Big Data definitions and evolution

Why Now

Opportunities

Challenges and Risks

Enabling Environment

Arab Countries Environment Landscape

Recommendations

What is Big Data?

"A paradigm for enabling the collection, storage, management, analysis and visualization, potentially under real-time constraints, of extensive datasets with heterogeneous characteristics."

[Recommendation ITU-T Y.3600]

Big Data:
Velocity

5 GB for an autonomous car!

Big Data : Variety

Big Data: VALUE

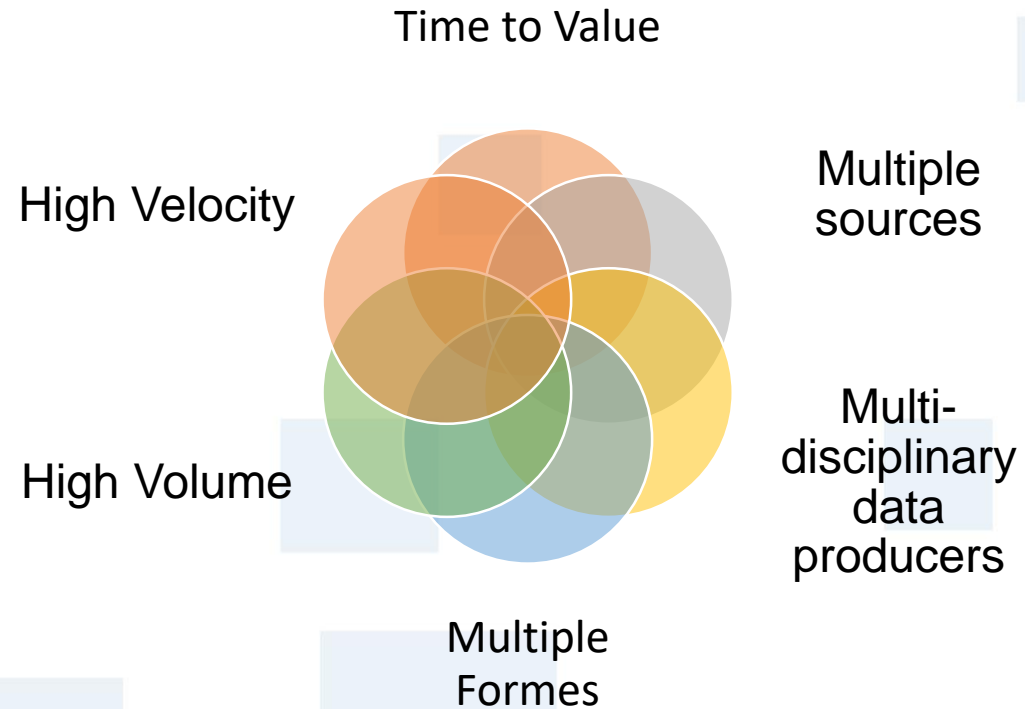

Annual Size of the Global Datasphere

Big Data: VALUE

Time to Value

← Time to Value is shrinking

Lesvos in Greece – Venus C

The University of the Aegean in Greece developed the VENUS-C Fire app—featuring Bing Maps, Microsoft Silverlight, and Windows Azure—to determine the daily wildfire risk and fire propagation in the vulnerable island of Lesvos during its dry season.

Fire App Fights
Wildfires with Data

Geography of Natural Disasters Laboratory at the University of the Aegean in Greece to calculate and visualize the risk of wildfire ignition and to simulate fire propagation.

Data is the new Oil! Really?

95% of data in Oil&Gaz is lost before it gets to business leaders!

How many leaders treat their data as Oil? How many measure its value? How many show their Data value in their financial reports, do they report the value to their board? ...

Data is pretty different from Oil!

Abundance

Reusable

Replicable

Zero Weight

Instantly transferable

Exponential benefits

Why Now ?

- It is here
- Many sources
- Open Data

Data
availability

- Acquisition
- Storage
- Compute

Shrinking
Costs

- Easy
- Accessible
- Democratized

Technology

- Time to value relationship of
Insight
- From Weeks to minutes

Time

- What's the social sentiment of my citizens?
- How do I optimize my services based on patterns of weather, traffic, etc.?
- How do I better predict future outcomes?

New
Questions

Big data market size revenue forecast worldwide.

Forecast revenue big data market worldwide 2011-2027 (in billion U.S. dollars)

Opportunities

« The data revolution was recognized as an enabler of the 2030 Agenda. It can not only help to monitor progress towards the SDGs, but it also engages multiple stakeholders to advance **evidence-based policies and programmes** aimed to reach the most vulnerable and leave no one behind. »

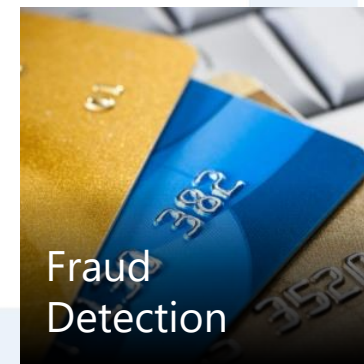

BIG DATA & THE SDGs

How data science and analytics can contribute to sustainable development

- 1 NO POVERTY**
Spending patterns on mobile phone services can provide proxy indicators of income levels
- 2 ZERO HUNGER**
Crowdsourcing or tracking of food prices listed online can help monitor food security in near real-time
- 3 GOOD HEALTH AND WELL-BEING**
Mapping the movement of mobile phone users can help predict the spread of infectious diseases
- 4 QUALITY EDUCATION**
Citizen reporting can reveal reasons for student drop-out rates
- 5 GENDER EQUALITY**
Analysis of financial transactions can reveal the spending patterns and different impacts of economic shocks on men and women
- 6 CLEAN WATER AND SANITATION**
Sensors connected to water pumps can track access to clean water
- 7 AFFORDABLE AND CLEAN ENERGY**
Smart metering allows utility companies to increase or restrict the flow of electricity, gas or water to reduce waste and ensure adequate supply at peak periods
- 8 DECENT WORK AND ECONOMIC GROWTH**
Patterns in global postal traffic can provide indicators such as economic growth, remittances, trade and GDP
- 9 INDUSTRY, INNOVATION AND INFRASTRUCTURE**
Data from GPS devices can be used for traffic control and to improve public transport
- 10 REDUCED INEQUALITY**
Speech-to-text analytics on local radio content can reveal discrimination concerns and support policy response
- 11 SUSTAINABLE CITIES AND COMMUNITIES**
Satellite remote sensing can track encroachment on public land or spaces such as parks and forests
- 12 RESPONSIBLE CONSUMPTION AND PRODUCTION**
Online search patterns or e-commerce transactions can reveal the pace of transition to energy efficient products
- 13 CLIMATE ACTION**
Combining satellite imagery, crowd-sourced witness accounts and open data can help track deforestation
- 14 LIFE BELOW WATER**
Maritime vessel tracking data can reveal illegal, unregulated and unreported fishing activities
- 15 LIFE ON LAND**
Social media monitoring can support disaster management with real-time information on victim location, effects and strength of forest fires or haze
- 16 PEACE, JUSTICE AND STRONG INSTITUTIONS**
Sentiment analysis of social media can reveal public opinion on effective governance, public service delivery or human rights
- 17 PARTNERSHIPS FOR THE GOALS**
Partnerships to enable the combining of statistics, mobile and internet data can provide a better and real-time understanding of today's hyper-connected world

Recommendations

Infrastructure

Develop PPP
System of trust for
investors

Skills

Launch Big Data
education
Initiate programs to build
capacity for business and
government leaders
In partnership with
Private sector

Innovation

Launch Data intensive
initiatives
Innovation Events
(developers, researchers,
start-ups, students to
create awareness and
simulate ideas and
innovations)
UN SDGs
Review and modernize
Innovation policies

System of Trust

Develop Open Data
Policies
Develop Data Privacy
Policy
Develop a harmonized
data privacy framework
and Harmonize around it
(à la GDPR)
