AI IN ACTION

Machine Learning and Mammography

Detecting invasive ductal carcinoma with convolutional neural networks showing how existing deep learning technologies can be utilized to train artificial intelligence (AI) to be able to detect invasive ductal carcinoma (IDC)¹ (breast cancer) in unlabeled histology images.

AI Assists with Skin Cancer Screening

Doctor Hazel, a skin cancer screening service powered by AI that operates in real time, relies on an extensive library of images to distinguish between skin cancer and benign lesions, making it easier for people to seek professional medical advice.

AI Helps Detect Bacteria in Water

Offline analysis is accomplished with a digital microscope connected to a laptop running Ubuntu* and the Intel® Movidius™ Neural Compute Stick. After analysis, contamination sites are marked on a map in real time

Shark Detection to Save Lives

Intel® Movidius™ Neural Compute Stick was used with Australia's Little Ripper Lifesaver UAV to monitor the New South Wales coastline for sharks.

CORail: Coral Reef Restoration and Research

Prototype a fully functional modular AI-powered underwater camera unit that continuously counts the number of visible fauna, and, as possible, assign a taxonomy to help protect endangered coral reefs.

AI has the power to make a difference and change lives. What will you make?
