

ITU Digital Skills Assessment Guidebook

- Objectives, target audience and content of the Guidebook
- Review of existing frameworks and approaches (examples)
- How to implement national digital skills assessments (step-by-step guidance):
 - √ How to assess current digital skills levels (supply)
 - ✓ How to assess needs and gaps (demand)
 - ✓ How to forecast future skills requirements

Main objectives of Guidebook

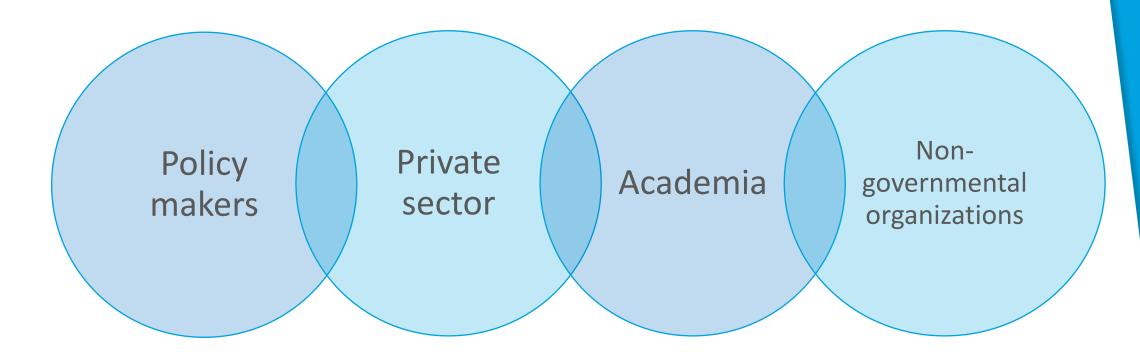

- Focus is on national level skills assessment
- Helps governments assess skills supply and demand and determine existing and future skills gaps
- Practical tool to guide policy makers in their digital skills
 strategies and education policies

Interested Member States are invited to use the *Guidebook* for implementing digital skills assessment at the national level

Target audience

ICT policy makers working in close collaboration with other stakeholders

What does the Guidebook cover?

Chapter 1: Review of existing skills assessment frameworks and approaches

Chapter 2: Assessment of current national skills levels (supply)

Chapter 3: Assessment of skills needs and gaps (demands)

Chapter 4: Forecasting future skills requirements

Appendix: List of knowledge resources on skills assessment

Chapter 1

Review of existing skills assessment frameworks and approaches

- Assessment approaches are often constructed around a digital skills framework
- A digital skills framework provides a means of categorizing and organizing the complexity and range of digital skillsets
- Frameworks create a common language and sometimes prescribe proficiency levels

DigComp			
Digital Competence Framework for Citizens			
EU JRC			
Updated 2017			
Includes 5 competence			
areas			

DLGF Digital Literacy Global Framework UNESCO Developed in 2018 to serve SDG 4 Adds 2 competence

areas to DigComp

	21313
•	Digital Skills to Tangible Outcomes
•	LSE
•	Organizes digital media skills around 4 domains
•	Updated 2012

DISTO

	NEDSF
•	New Essential Digital Skills Framework
•	UK Government
•	5 skills categories
•	Updated 2018

Assessment approaches

Knowledge based assessments

Tests skills using questions about factual or procedural knowledge

More accurate information on people's abilities than selfassessments

Commonly used e.g.
Eurostat,
ITU household
questionnaires

Selfassessments

Participants rate their own level of knowledge, ability, confidence or usage

Performance based assessments

Measures actual performance on digital skills in realistic scenarios using tools such as browsers and word-processing software in a laboratory or software simulation.

Often deployed in school settings; expensive

International digital skills assessments

Frequency

Audience

Programme for the International Assessment of Adult Competencies in Technology Rich Environments (PIAACTRE)

Organisation for Economic Cooperation and Development (OECD)

Over 40 developed countries

Individual countries

Every 10 years

Adults

International Computer and Information Literacy Study (ICILS) International
Association for
the Evaluation of
Educational
Achievement
(IEA)

21 countries overall; mostly developed countries

National education systems

Every 5 years

8th-grade students

Programme for International Student Assessment (PISA)

Organisation for Economic Cooperation and Development (OECD) 2018: 80 developed and developing countries and 82 languages

National education systems

Every 3 years

15 years old

Chapter 2 Assessment of current national skills levels (supply)

process

Assessing available skills (supply)

analyze

dissemination

Assessing available skills (supply)

Assemble Team

Choose a governance model

- Policy model
- Independent Model
- Hybrid Model

Engage stakeholders

Decide what to assess

Inventory of existing data sources

Decide who, what and how

Collect and analyze data

Compile existing data

Choose a data collection approach

Collect and Analyze data

Disseminate data

Decide who

Assessing available skills (supply):
Decide who what and why

Who's in charge?

Needs to consider	Defined characteristics
Who e.g. Adults? Students? Sample of population at large or certain geographic areas? Working adults?	
What e.g. Level of skills (basic-advanced), labour force, ICT sector-specific	
Timeline e.g. How long will this take? When do you need the data (before a new education plan, workforce initiatives, etc.)?	
Frequency e.g. How often do want to collect data? Annually? Every 3 years?	
Data collection and analysis e.g. Where will data be collected? Who's in charge? Who will conduct the analysis?	
Data dissemination e.g. When and how to disseminate the data?	

Methods to assess current skills needs

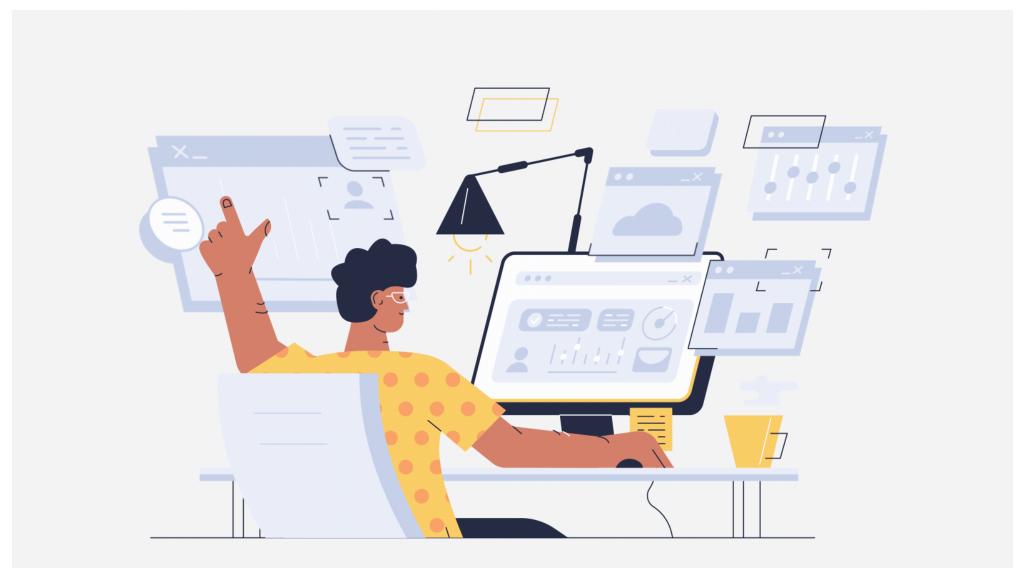

Chapter 3

Assessment of skills needs (demand) and gaps

1. What is the current demand for digital skills across the country and what are the different types of digital skills requirements?

2. What are the areas of shortage or mismatch of digital skills in the workforce?

Understanding current digital skills needs and gaps

Administer desk review

Review available literature on the demand of digital skills in the country

Choose methods

Choose the appropriate methods to respond to data gaps that are not covered in the desk review

Step 02

Focus on key sectors

Identify key sectors and focus on those

Conduct a gap analysis Compare results of the skills

Compare results of the skills supply with skills demand to identify digital skills gaps Step 04

Communicate the results

Develop a communication and reporting strategy

Possible questions to use when Assessing skills needs and gaps (demand)

- 1. How have technological changes affected your sector?
- 2. What new digital technologies have been introduced in your sector?
- 3. What impact have these technologies had on the sector?
- 4. For all employees, what are the baseline digital skills that are needed for your work? What are the intermediate digital skills that are needed for your work?
 - a. What shortages do you observe in these skills?
 - b. When recruiting, which jobs do you find difficult to find candidates for?
 - c. Which digital skills are required for these jobs?
 - d. In general, which digital skills would you say are most commonly lacking in candidates?
- 5. For your sector, what are the sector-specific digital skills that are required? What are the intermediate digital skills that are needed for your work?
 - a. What shortages do you observe in these skills?
 - b. When recruiting, which skills do you find are most commonly lacking in candidates?
- 6. For your sector, what are the advanced/specialist technical IT skills that are required?
 - a. What shortages do you observe in these skills?
 - b. When recruiting, which skills do you find are most commonly lacking in candidates?
- 7. What do you think are the causes of the skills gaps?
- 8. What types of training do you provide to your employees? How frequently?
- 9. How does the skills gap affect your business?

Gap analysis

Compare the results of the skills supply with the required skills levels identified by partners.

Compare skills mentioned in vacancy surveys explaining why positions have gone unfilled with outcomes of supply-side skills assessments.

Compile information from sectoral studies, both surveys and qualitative research, about the difficulty of recruiting appropriate candidates.

Review any employee surveys and find out if they feel over- or under-qualified for jobs, and in what digital skills areas.

Assess graduation rates for specialized digital skills fields, as well as average growth rates in particular fields of study over a period of time, as compared with employment rates for specialized digital skills fields

Chapter 4 Tomorrow's Talent

How to forecast future digital skills requirements

STEP

01

STEP

02

STEP

03

Understand trends

Review resources that examine worldwide and regional technology trends.

Identify impacts of trends.

Make strategic decisions
Review other factors that influence
requirements.

Make decisions on further action.

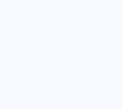

Conduct anticipation exercises

Conduct desk review of development trends.

Gather data to understand existing industries.

Source: ITU Digital Skills Assessment Guidebook 2020

Forecasting trends and their impacts

- 1. How do you expect technological changes will affect your sector in the coming five to 10 years?
- 2. What new digital technologies will likely be introduced in your sector?
- 3. What impact might these technologies have on the sector?
- 4. What new digital skills requirements might emerge to meet technological changes in your sector?
- 5. What digital skills could be added to the education system to ensure the pipeline is well prepared for these changes?
- 6. How might you consider retraining or upskilling current employees for these changes?

Forecasting trends and their impacts

Trend forecasted	Assessment of impact on country (e.g. how population growth will impact the economy; how emerging technology will be adopted)	Sectors likely to be affected by the trend	New sectors that might emerge from the trend

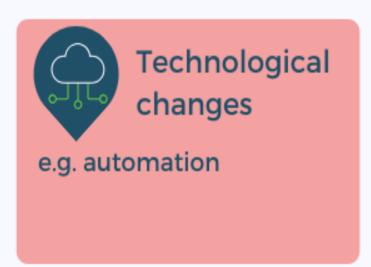

Anticipation exercises (review of national plans)

Name of	Year and	Lead agency	What goals	What sectors are affected	What digital skills
national development plan/strategy plan	time-frame of plan		are covered in the plan?	by the goals?	requirement s emerge from the plan?
					24

What are some of the factors that affect digital skills demand?

e.g. retirement and replacement, youth unemployment

e.g. economic expansion and contraction, employer surveys, employment data, future scenarios

Trade

e.g. trade agreements, export sectors

Conclusion

- This guidebook is designed to provide as much flexibility as possible for each country to choose an approach that fits its resource constraints and unique goals.
- Each country has different digital skills needs and requirements based on its level of technological development and its economic sectors.
- Assessment methods will depend on a country's resources and stakeholder engagement.
- Policy-makers should engage with partners in the private sector, non-governmental organizations and academia to craft the assessment approach that matches the country's needs and goals.

ITU can provide further advice to Member States interesting in using the *Guidebook* for implementing national digital skills assessments
