

National Emergency Telecommunications Planning Process

Introduction

The Questions You Need to Answer

- What Risks apply to YOUR Country (NDMO?)
- What Information Technologies are available (Regulator?)
- What Communications Technologies are available (Regulator?)
- How should ICT be used in the Preparation Phase? (Joint?)
- How should ICT be used in the Warning Phase? (Joint?)
- How should ICT be used in the Response Phase? (Joint?)
- What happens to ICT During The Incident? (Joint)
- How should ICT be used in the Recovery Phase? (Joint?)
- How are we going to make sure ICT can be used in an emergency?

What Risks apply to Your Country

- What are the risks?
 - Cyclone
 - Tsunami (remote earthquake)
 - Earthquake (local)
 - Heavy Rain
 - ...
- What areas of your country will they affect?
 - Geography? (e.g. everywhere, coastal locations, hillsides, etc.)
 - Remoteness (e.g. large population centres with well-developed infrastructure, small islands with minimal communications facilities)
 - ...

Information Technologies

- What are they?
 - Gathering data
 - Photographs (from satellites, planes, drones, cellphones, etc.)
 - Structured data (e.g. paper and electronic questionnaires)
 - Crowd sourced data (from Twitter, Facebook, etc.)
 - ...
 - Storage of data
 - Spreadsheets
 - Databases
 - Local or cloud-based?
 - ...
 - Tools to make sense of the data
 - GIS
 - Data Mining
 - Human Brain
 - ...

Information Technologies - 2

- What are the strengths and limitations of each tool?
 - Ease of use (e.g. familiarity with tool, ease of use)
 - ...
- Will they be affected by the (previously identified) risks?

Communications Technologies

- Examples are:
 - broadcasting (e.g. AM, FM, TV)
 - social media (e.g. Facebook)
 - cellular (e.g. broadcast text)
 - satellite (e.g. Chatty Beetle)
 - radio links (VHF, HF)
 - sirens
 - Non-ICT solutions (e.g. newspapers, word of mouth, village meetings, drums, etc.)

Comparing Tools

- What are the strengths and limitations of each tool?
 - Geography (e.g. everywhere, coastal locations, hillsides, etc.)
 - Remoteness (e.g. large population centres with well-developed infrastructure, small islands with minimal communications facilities, etc.)
 - Ease of use (e.g. familiarity with tool, ease of use)
 - ...
- How will they survive the (previously identified) risks?

Information & Communications Technologies – Group Work

- Define the Technology – *HF Radio*
- Define the Location it will be used – *Remote Islands*
- Define the Risk – *A Large Cyclone*
- What are the strengths and limitations of this tool?
 - Geography (e.g. everywhere, coastal locations, hillsides, etc.)
 - Remoteness (e.g. large population centres with well-developed infrastructure, small islands with minimal communications facilities, etc.)
 - Ease of use (e.g. familiarity with tool, training required, etc.)
 - ...
- How will it survive the risk?

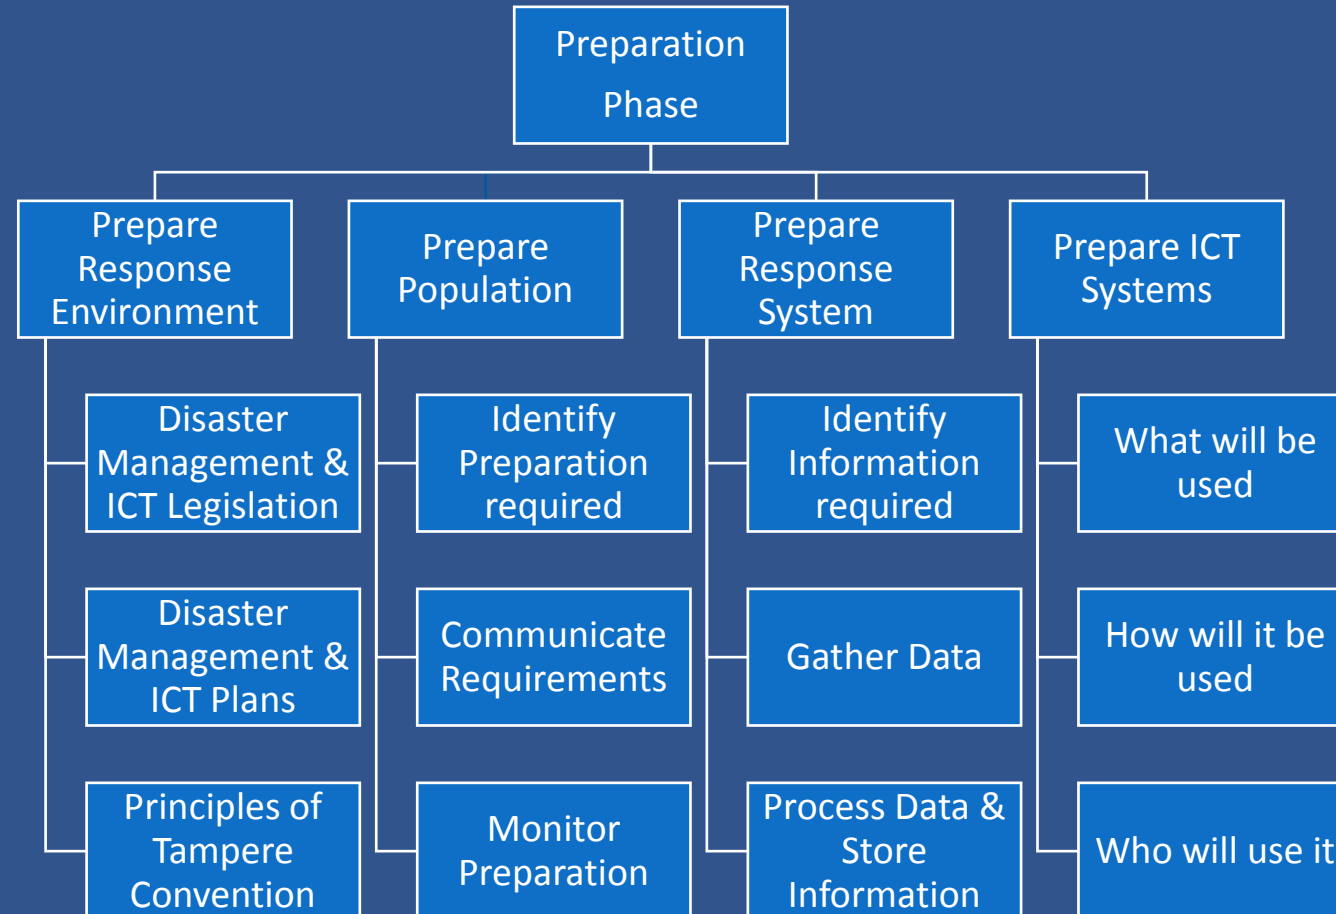

National Emergency Telecommunications Planning Process

The Preparation Phase

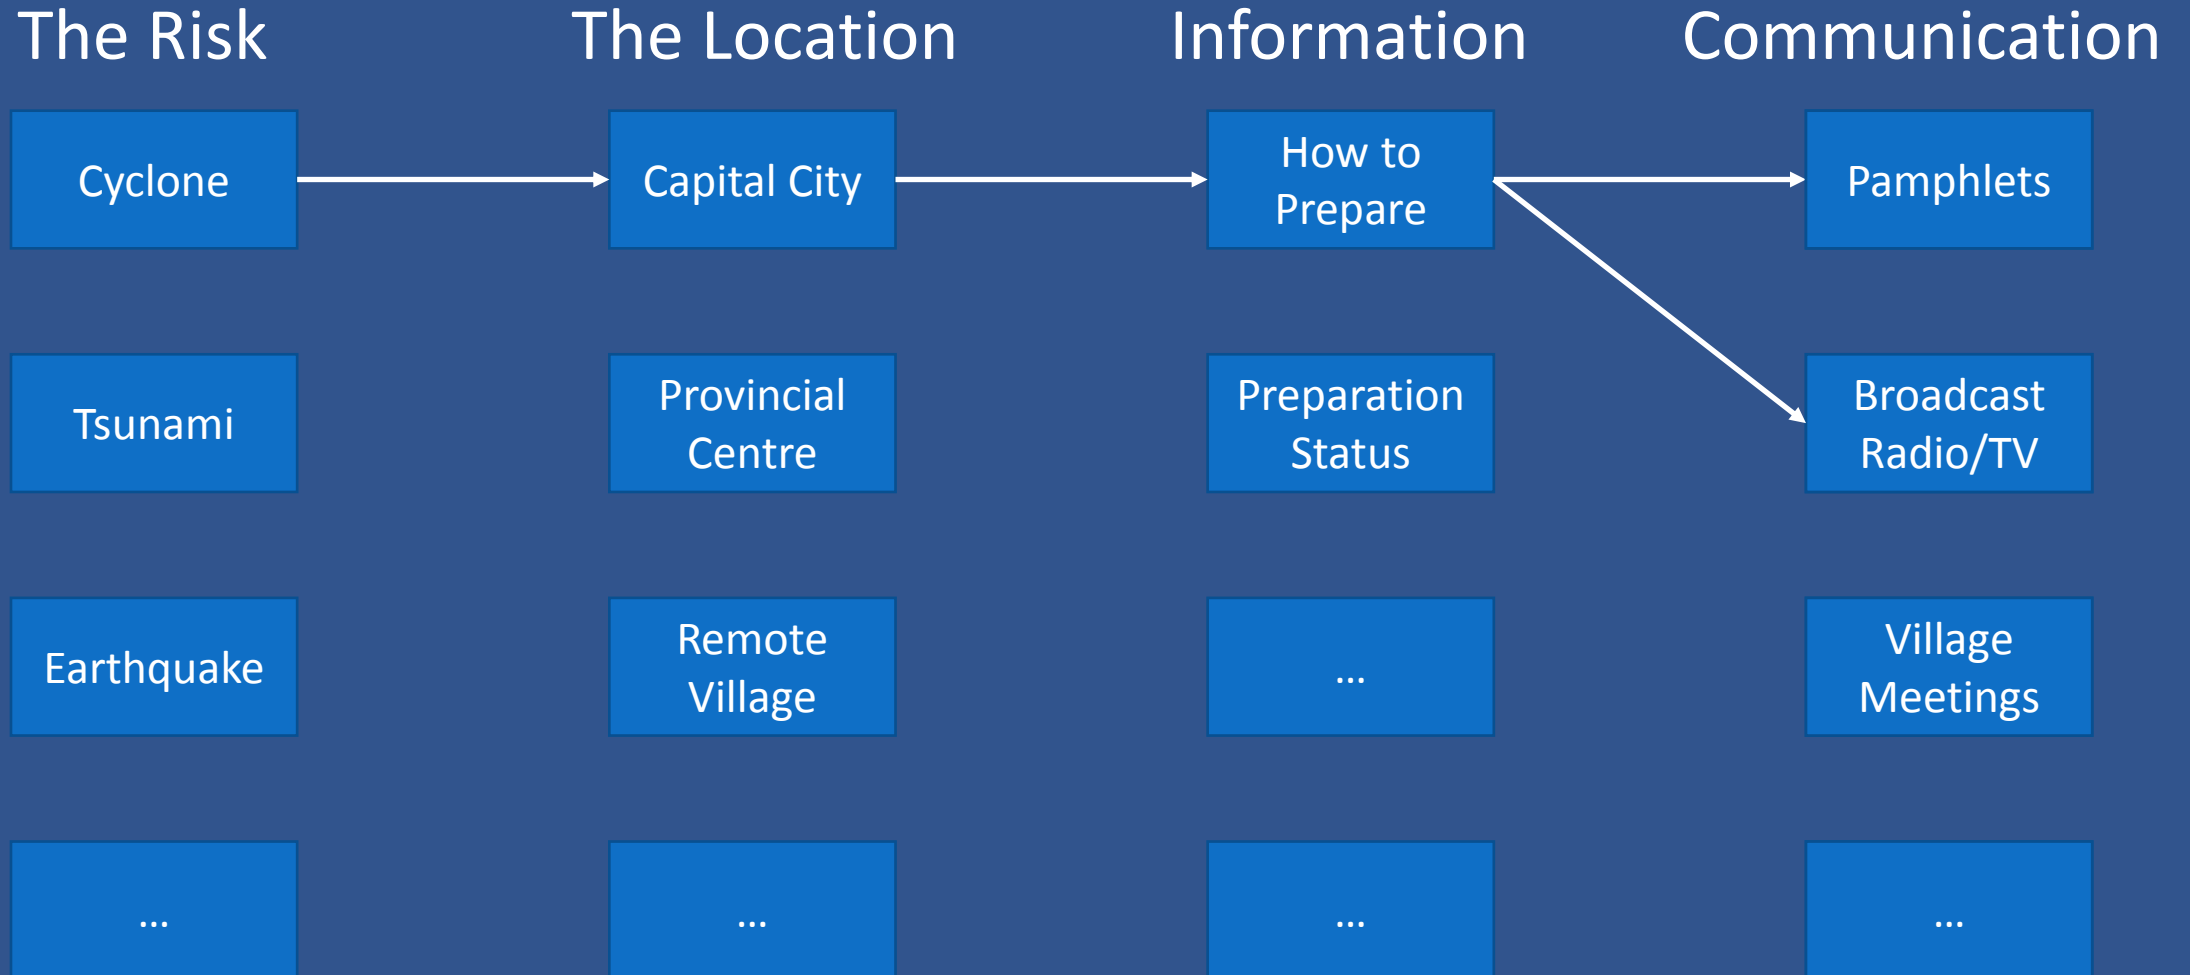

ICT in the Preparation Phase

- What are we preparing for?
- Where do we want to prepare?
- Outwards communication
 - What information do the population need to prepare?
 - How can we get this information to the right people?
- Inwards communication
 - What information do we need centrally to prepare?
 - How are we going to gather this information?
 - How can we communicate this information?

ICT in Disaster Management: Preparation Phase

ICT in the Preparation Phase – Example 1

ICT in the Preparation Phase— Example 2

The Risk

Cyclone

Tsunami

Earthquake

...

The Location

Capital City

Provincial Centre

Remote Village

...

Information

How to Prepare

Preparation Status

...

...

Communication

Pamphlets

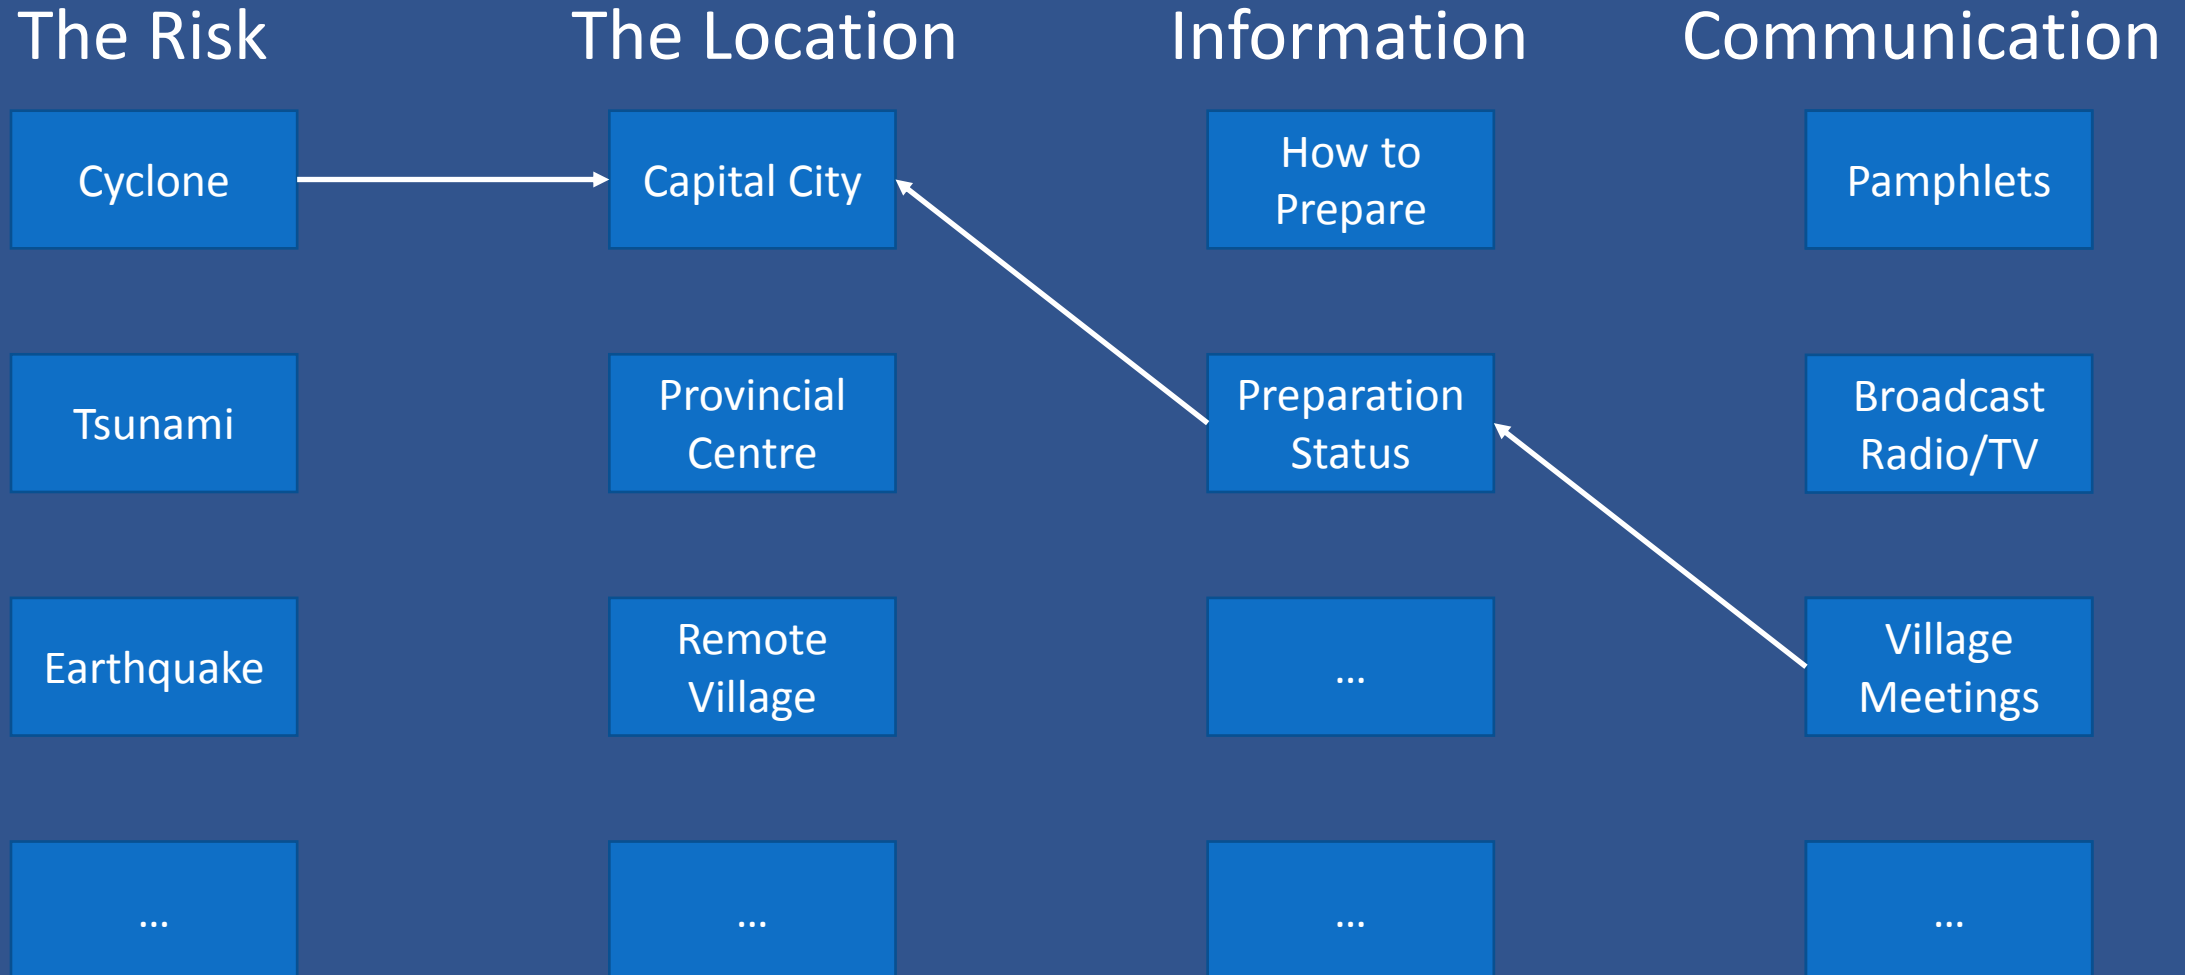

Broadcast Radio/TV

Village Meetings

...

ICT in the Preparation Phase— Example 3

ICT in the Preparation Phase – Group Work

- Define the Risk - *Tsunami*
- Define the Location *Remote village*
- Define whether this is information for the population or the NDMO
Information for the NDMO
- Decide what information you want to communicate
- Decide how you are going to communicate this information

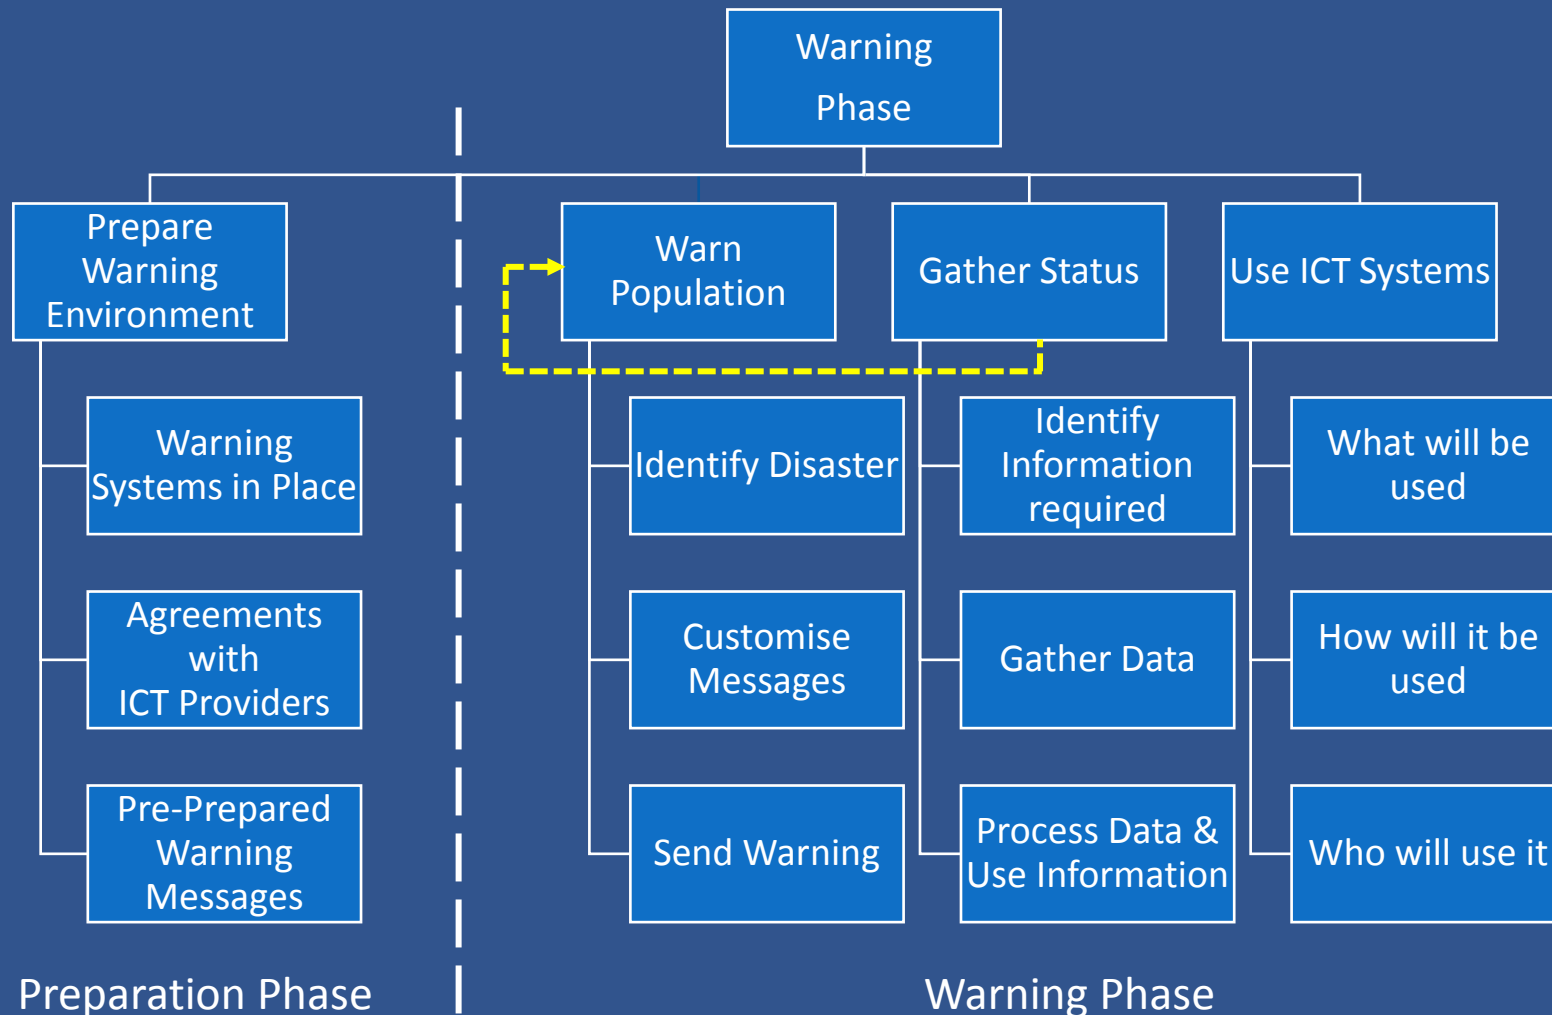

National Emergency Telecommunications Planning Process

The Warning Phase

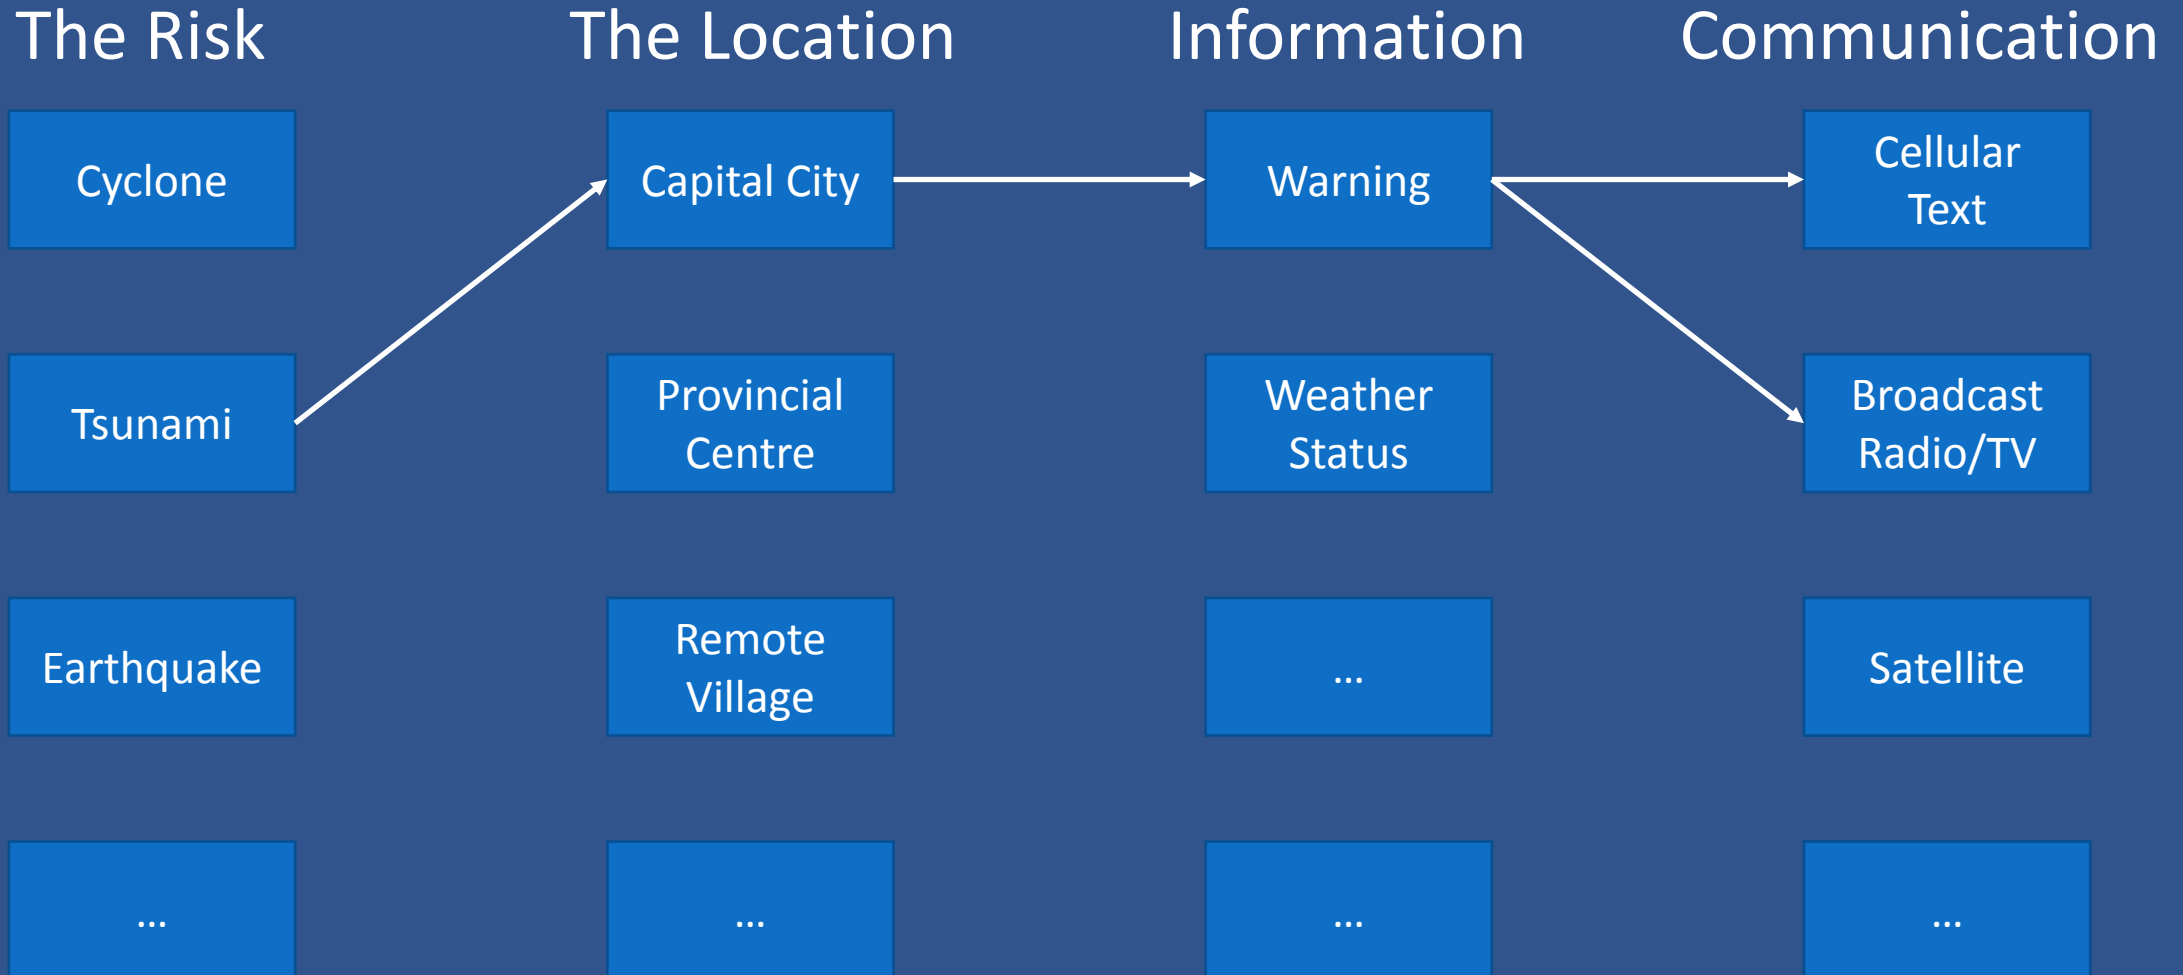

ICT in the Warning phase

- What are we warning about?
- Where are we warning?
- Outwards communication
 - What information do we want to convey?
 - How can we get this information to the right people?
- Inwards communication
 - Do we want to gather information?
 - What information do we want to gather?
 - How are we going to gather this information?
 - How can we communicate this information?

ICT in Disaster Management: Warning Phase

ICT in the Warning Phase – Example 1

ICT in the Warning Phase – Example 2

The Risk

Cyclone

Tsunami

Earthquake

...

The Location

Capital City

Provincial Centre

Remote Village

...

Information

Warning

Weather Status

...

...

Communication

Cellular

Broadcast Radio/TV

Satellite

...

ICT in the Warning Phase – Group Work

- Define the **Risk** *Tropical Cyclone*
- Define the **Location** *Provincial Centre*
- Define **Who** the information is for *The Population*
- Decide **What** information you want to communicate
- Decide **How** you are going to communicate this information

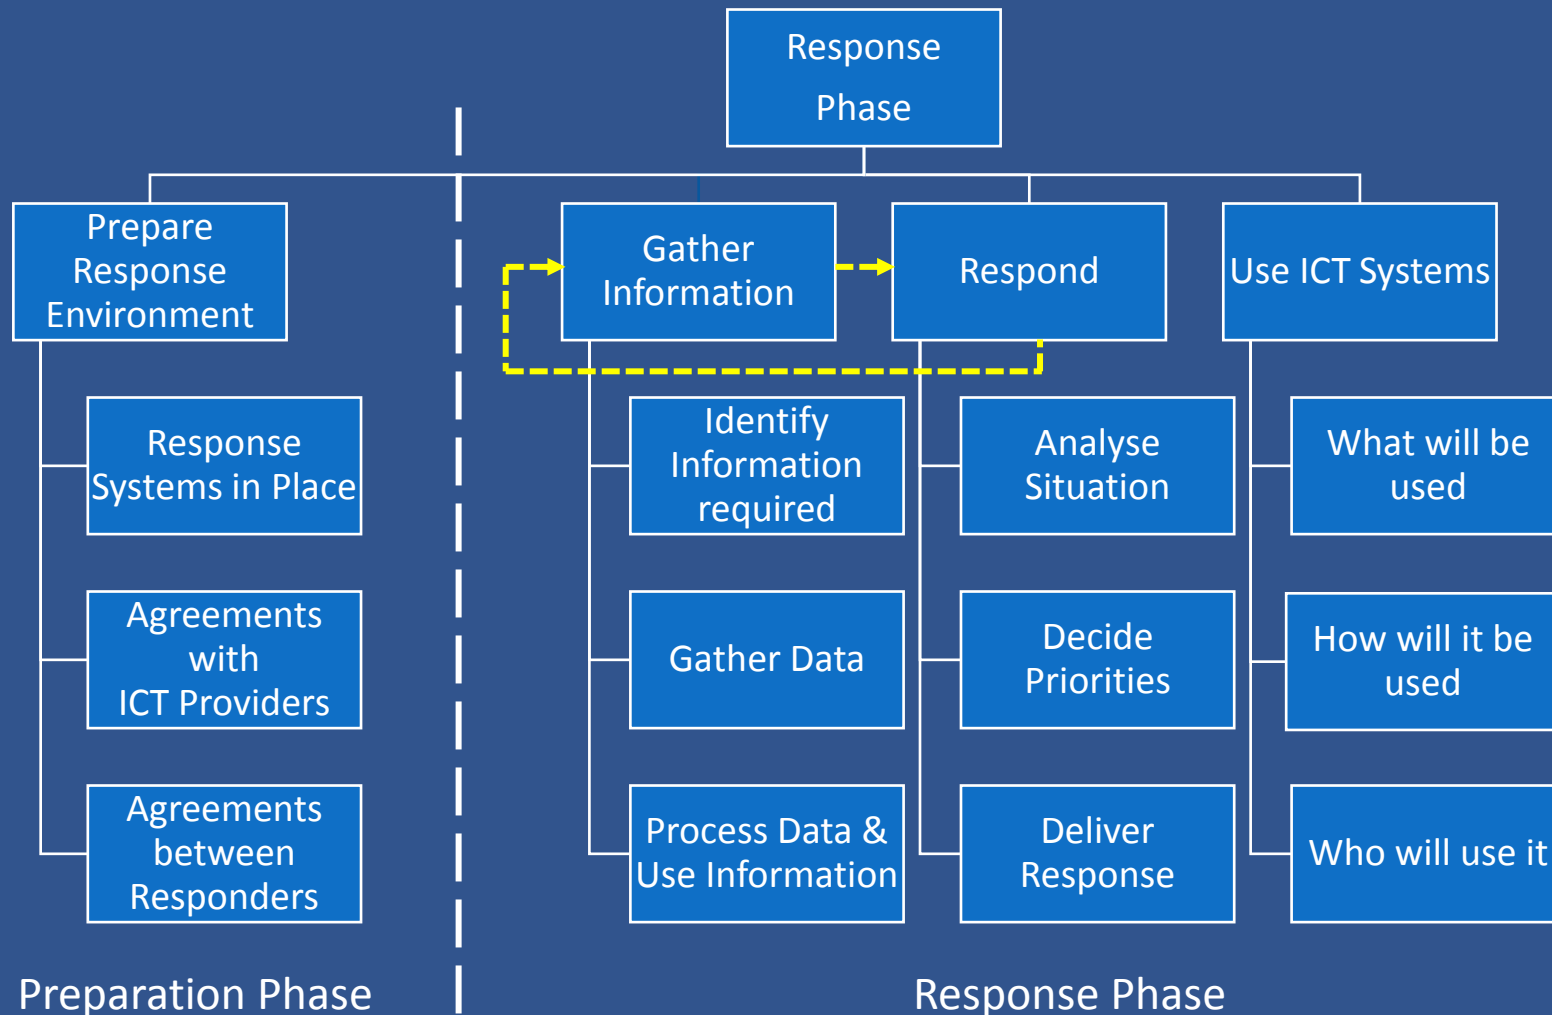

National Emergency Telecommunications Planning Process

The Response Phase

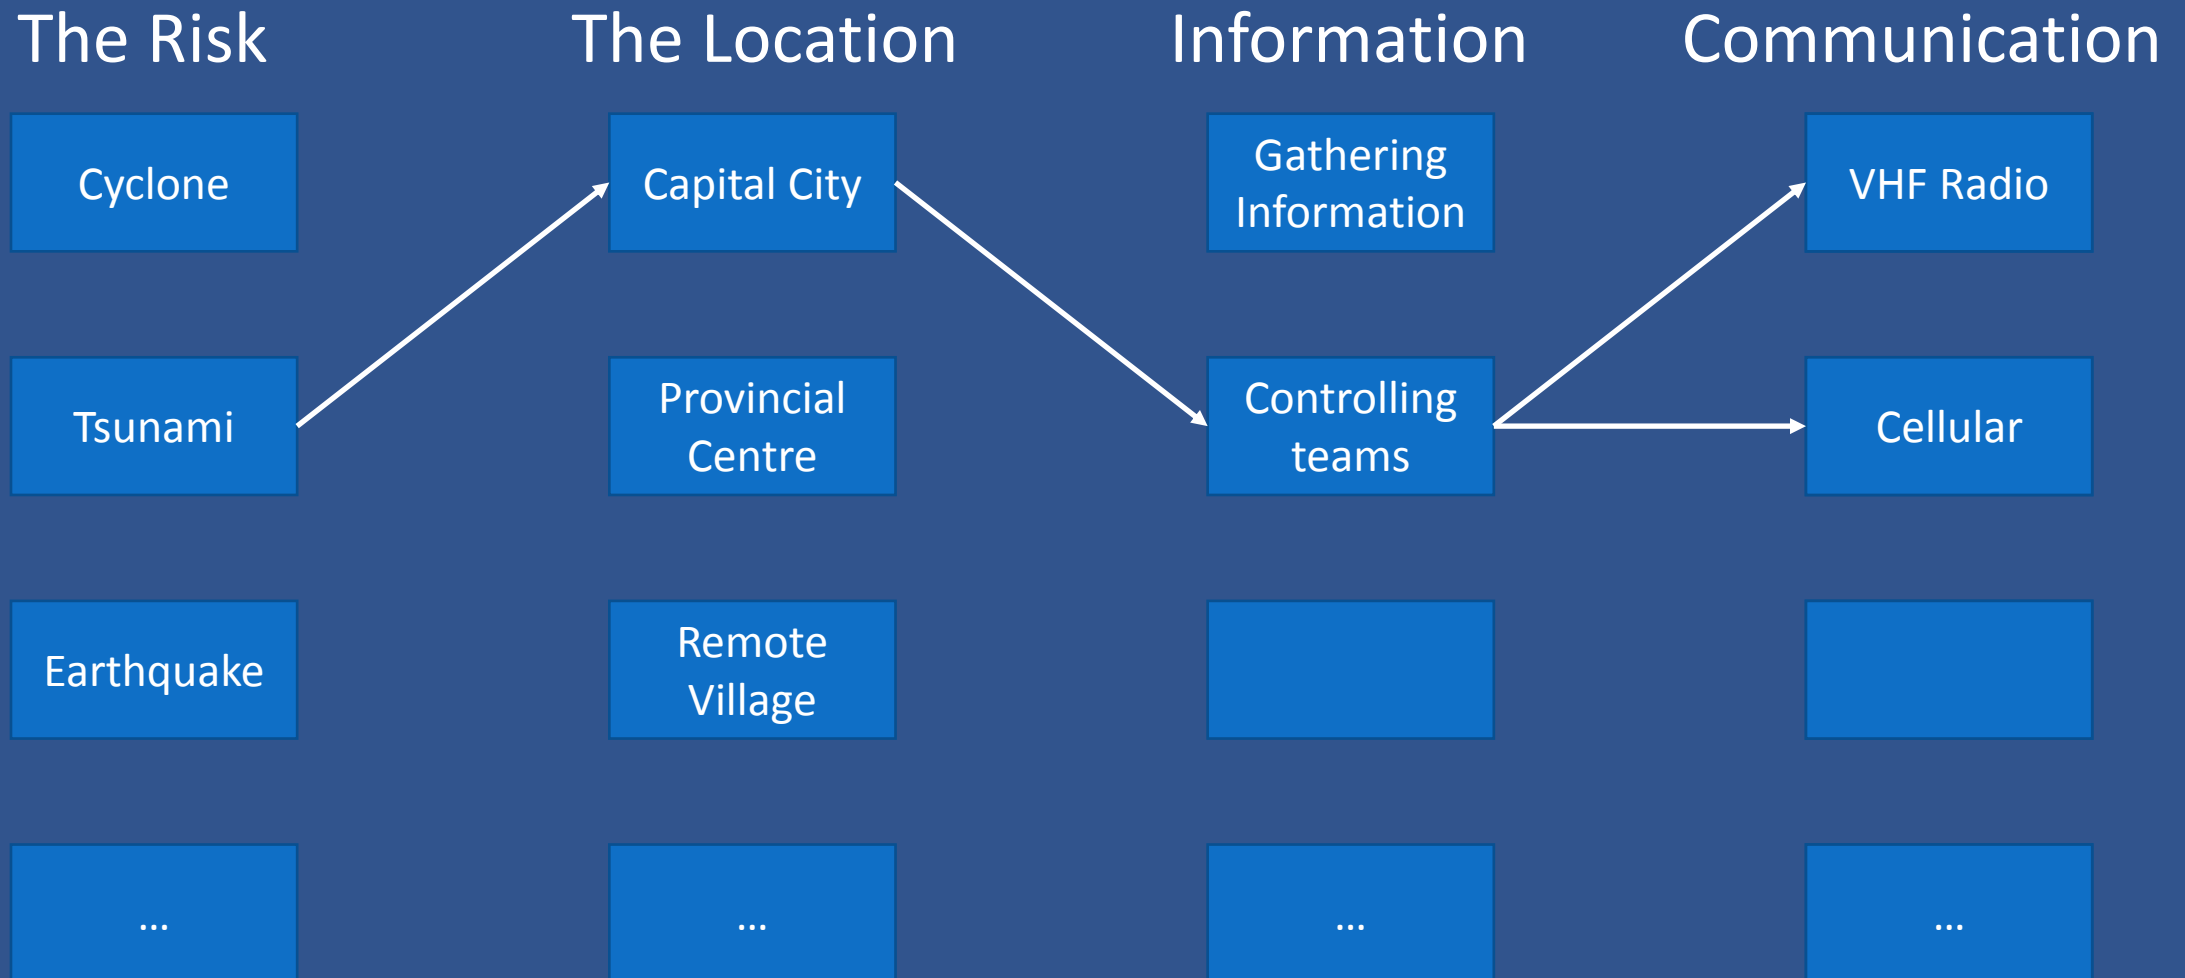

ICT in the Response Phase

- What are we responding to? (see previous)
- Where are we responding to it? (see previous)
- How have things changed since the disaster struck?
- Inwards communication
 - What information do we need to receive?
 - How can we gather this information?
 - How can we receive this information?
- Outwards communication
 - What information do we want to convey?
 - How can we transmit the information?

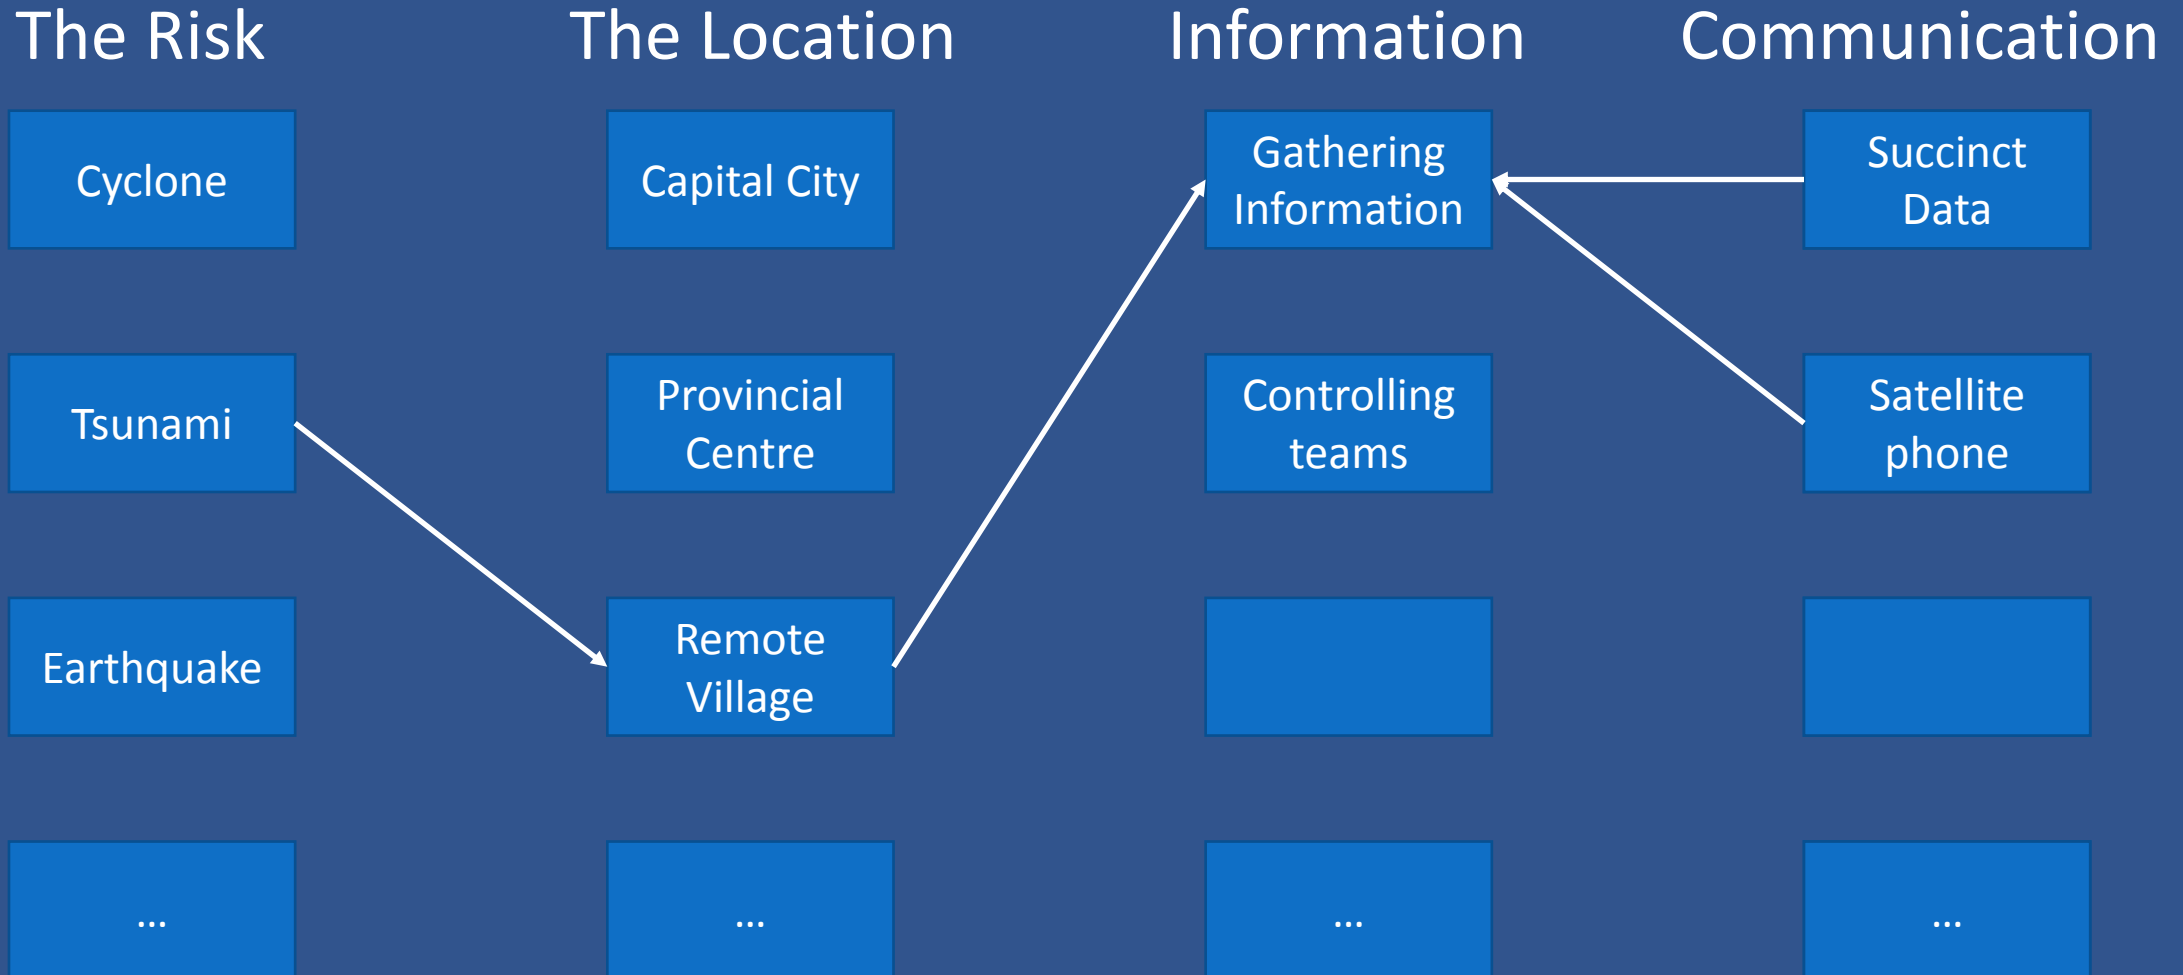

ICT in Disaster Management: Response Phase

ICT in the Response Phase – Example 1

ICT in the Response Phase – Example 1

ICT in the Response Phase – Group Work

- Define the Risk **Tropical Cyclone**
- Define the Location **Remote Islands**
- Define how have things changed **No Cellular or Broadcast radio**
- Define who needs what information **NDMO - Info on Disaster effect**
- Decide what information the NDMO wants to receive
- Decide how this information is going to be communicated

National Emergency Telecommunications Planning Process

The Recovery Phase

ICT in the Recovery Phase

- What are we recovering from?
- Where are we recovering from?
- How have things changed since the response phase?
- Inwards communication
 - What information do we need to receive?
 - How can we gather this information?
 - How can we receive this information?
- Outwards communication
 - What information do we want to convey?
 - How can we transmit the information?

ICT in Disaster Management: Recovery Phase
