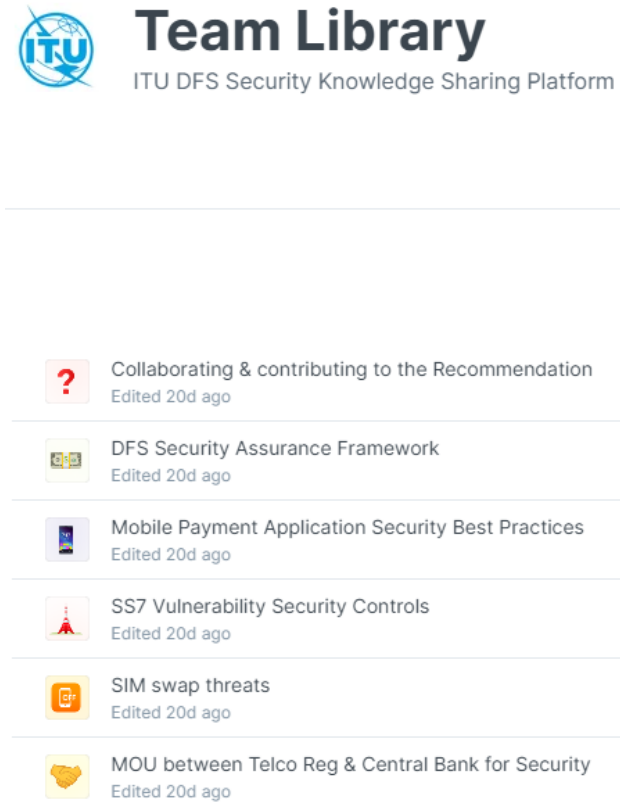
Digital Financial Services Cyber Resilience Toolkit and Knowledge Share Platform for DFS Security

Vijay Mauree
Programme Coordinator
Standardization Bureau, ITU

ITU Knowledge Sharing Platform for Digital Finance Security



Objective

- Collaborate with ITU to keep up to date the DFS security assurance framework security controls and DFS security recommendations.
- Share experiences, challenges, and lessons learned from the implementation of security measures across various jurisdictions.
- Communicate directly with their peers on issues relating to security of digital financial services.

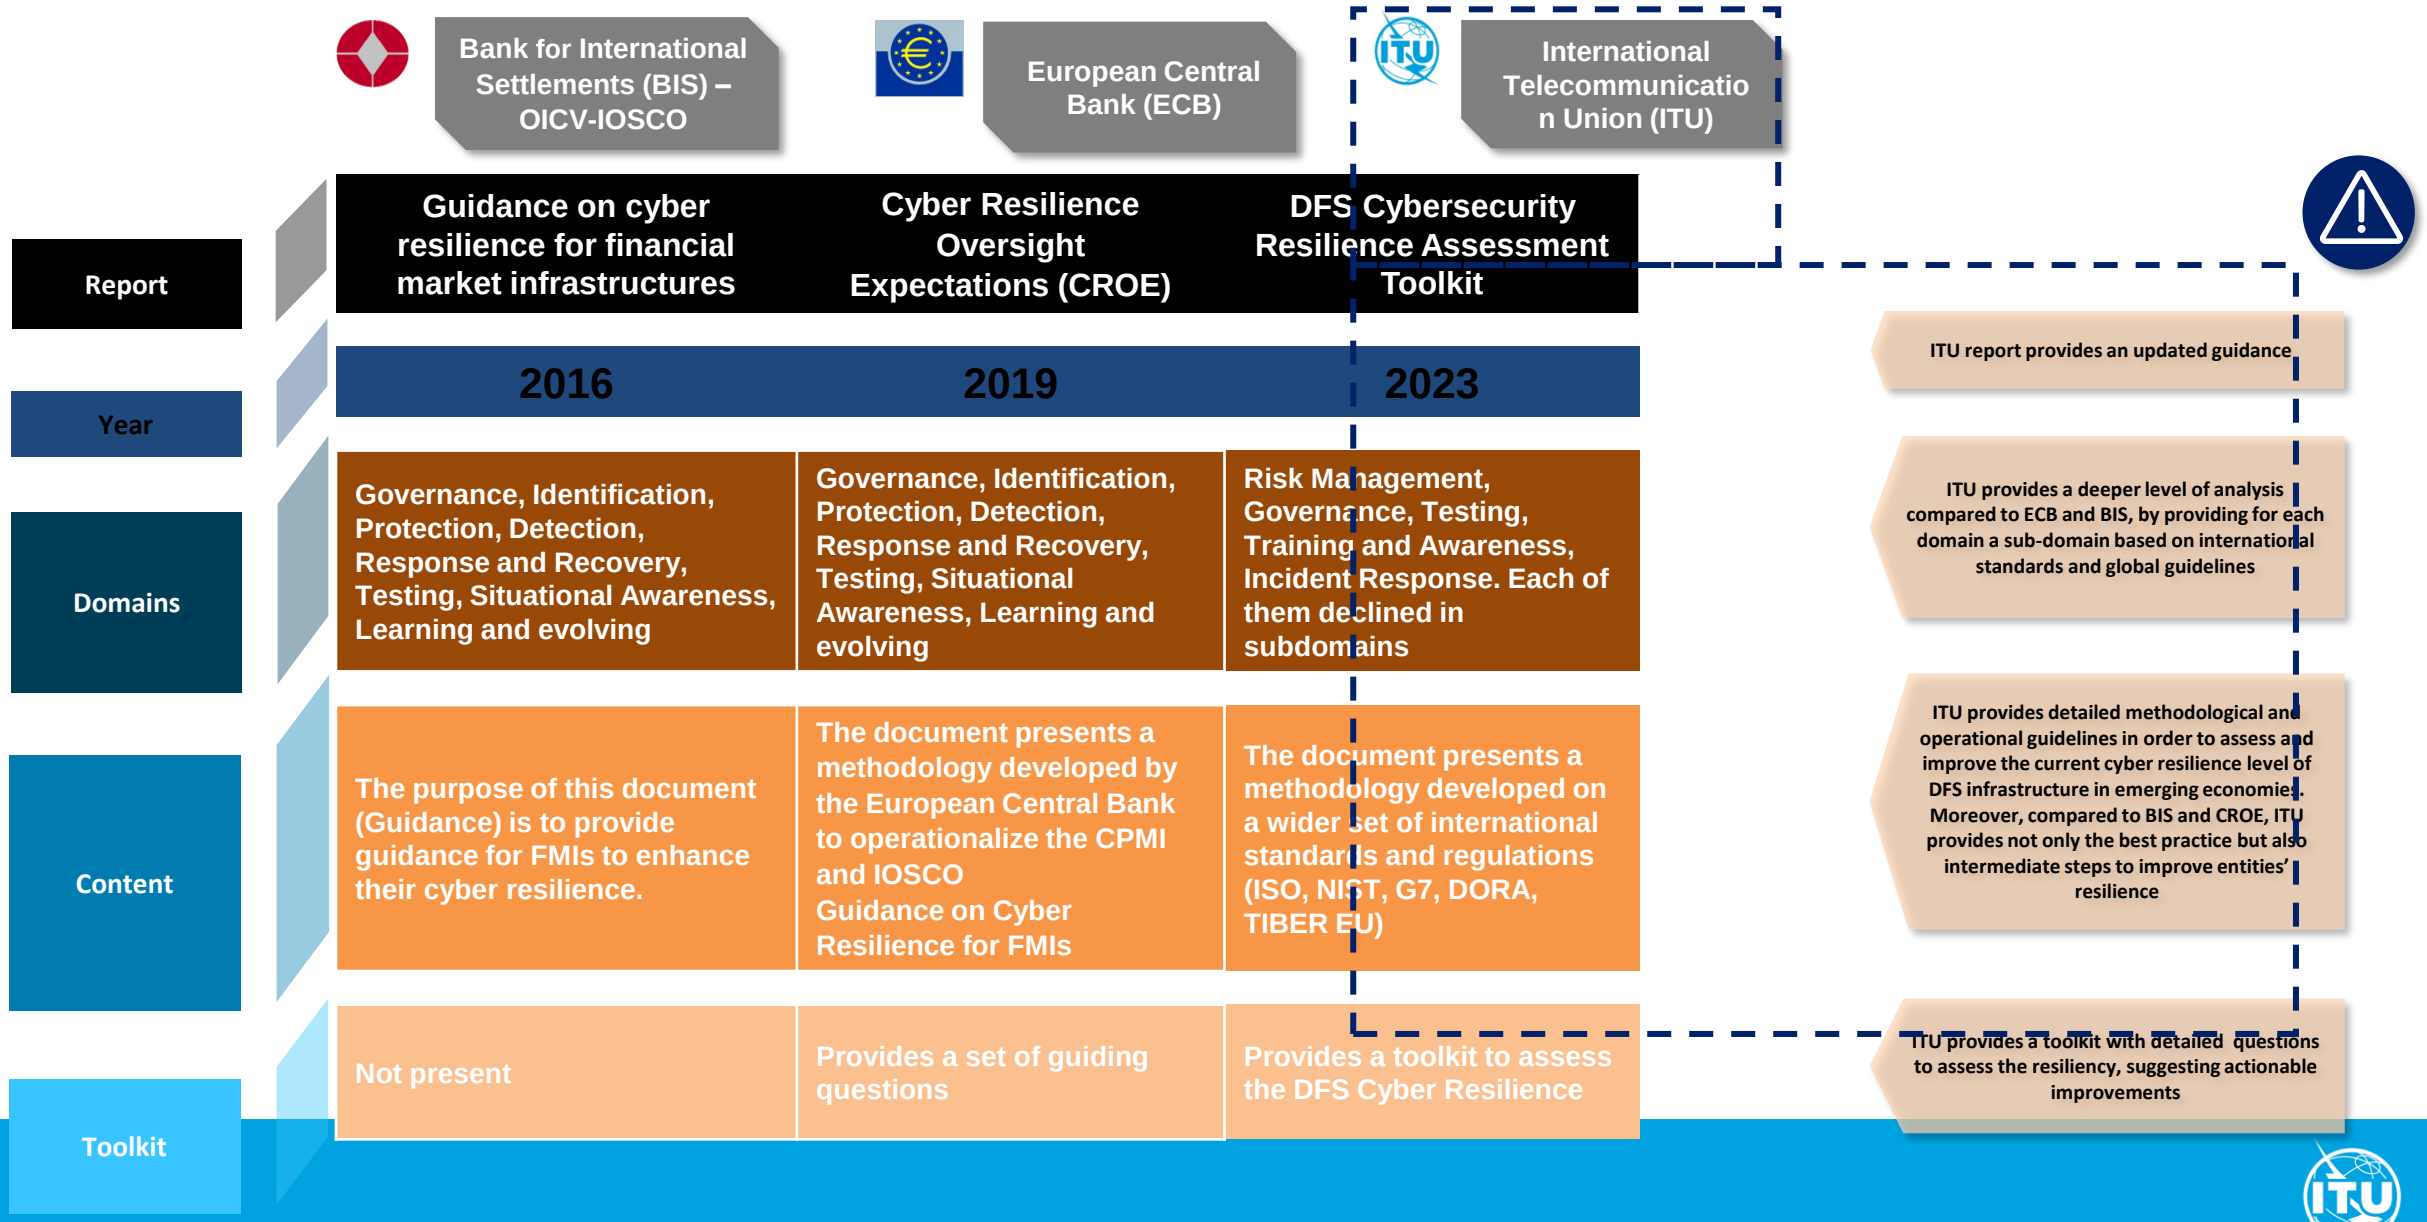
Cyber Security Resilience Assessment toolkit for DFS Critical Infrastructures

Objectives

1. **Facilitate Cyber Resilience Self-Assessments:** To empower DFS entities, users, and actors to proactively assess their existing security protocols and identify potential vulnerabilities.
2. **Enhance DFS Infrastructure Resiliency:** Reinforce both peripheral and internal defences of the DFS infrastructure, bolstering resistance against potential cyber threats.
3. **Provide Stakeholder Education:** Equip stakeholders from various sectors within the DFS ecosystem, including telecommunications and finance, with the knowledge to prepare for and defend against malicious cyber operations and unauthorized access attempts.
4. **Establish Best Practices:** Encourage the adoption and implementation of effective cyber defence practices tailored to each DFS entity's unique needs

Cyber Resilience Frameworks Comparison



Structure of the Cyber Resilience Assessment Toolkit

Source Leverage

- NIST Security and Privacy Controls (SP 800-53).
- EU's Digital Operational Resilience Act (DORA).
- ISO/IEC 27000-series (ISO 27001 and ISO 27005).
- Payment Card Industry Data Security Standard (PCI DSS) and Payment Application Data Security Standard (PA DSS).

Structure of the Cyber Resilience Assessment Toolkit

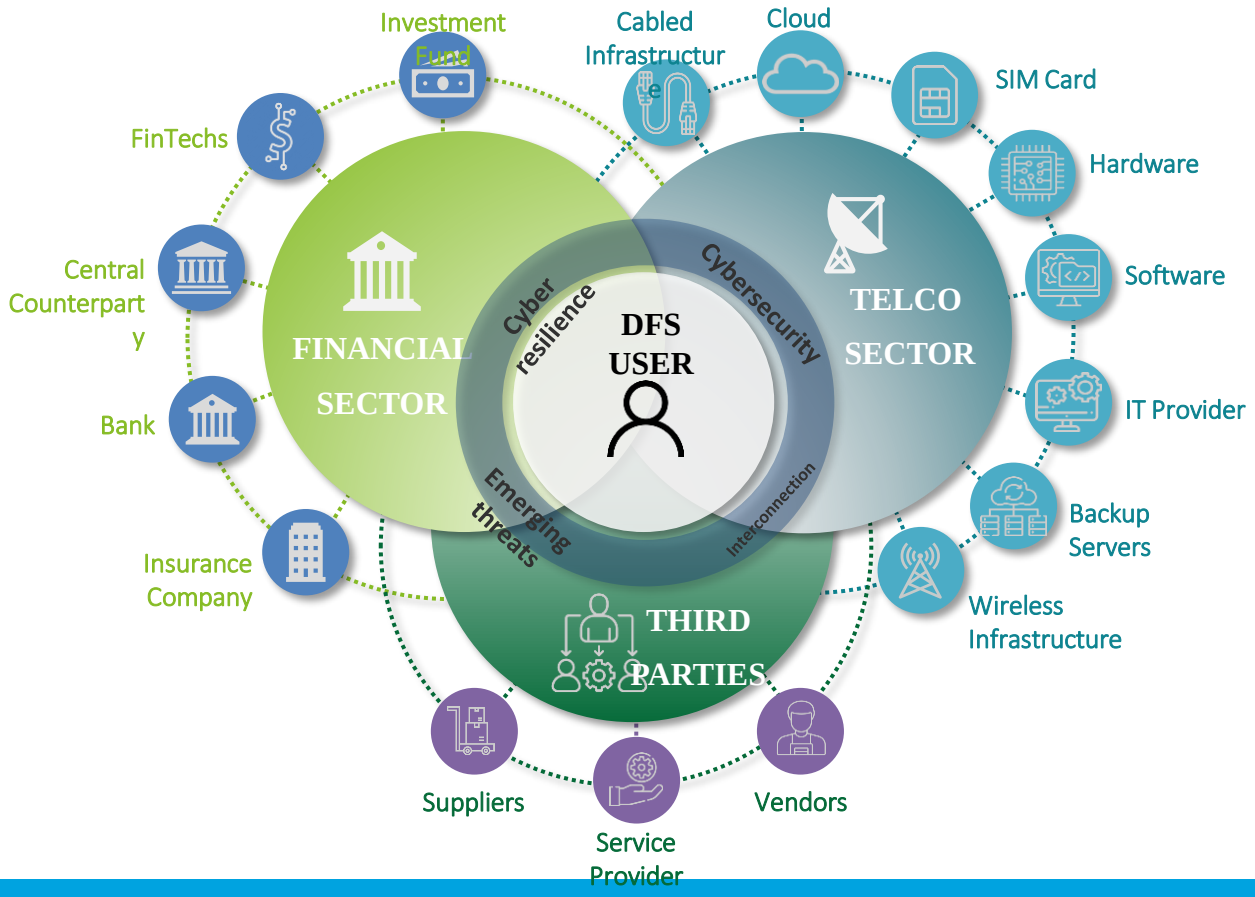
Toolkit Implementation:

- Five Pillars
  - Risk Management,
  - Governance,
  - Testing,
  - Training and Awareness,
  - Incident Response
- Four levels of cyber resilience maturity. (None, Basic, Intermediate, Advanced, Expert)
- Guided self-assessment through questions and controls.
- Infographics presenting final resilience assessment and areas for improvement.

Cyber Resilience Toolkit

DFS Critical Entity Identification

- Categorizing entities based on roles and potential impact on users and national population during a cyberattack.
- Coordinating with critical entities to bolster cyber resilience.
- Criticality classification based on ownership and potential impact on consumer base.
- to identify vulnerabilities and define roadmaps for improvements.



Cyber Resilience Toolkit's Pillars

Assessing cyber resilience

Methodology Pillars	Risk Management	Governance	Testing	Training and Awareness	Incident Response
Definition	The process related to the efficient implementation of risk assessment and treatment activities. These processes allow DFS entities and relevant third-parties to structure and update mechanisms to anticipate, evaluate and mitigate risks, ensuring critical resiliency	The framework for DFS entities to achieve strategic and resiliency objectives. DFS entities' governance bodies define strategic objectives and prorates to address critical resiliency and ensure a robust cyber resilience approach implementation to face prevailing and emerging cyber-focused threats	The use of a wide range of cyber resilience assessment tools and techniques to understand how effective the entity's cybersecurity capabilities and measures implemented are in preventing and defending against malicious cyber-threat actors	The process that provides participants with an overview of strategies, approaches, and procedures in place within a DFS entity. Such processes aim to upskill staff to a pre-determined understanding of a given matter	The ability of an entity to handle cybersecurity incidents. This includes policies and strategies that structure the incident response process and required cybersecurity capabilities to prevent, detect, manage and recover from ICT-related incidents
Topics covered	• Risk Assessment • Asset Management • Risk Treatment • Monitor and Review	• Roles and Responsibilities • Communication Channels • Availability of Official Documentation • Monitoring and Review Processes	• Red Teaming • Penetration Testing • Vulnerability Assessment • Simulations and War Gaming	• Employee Training • Information-Sharing Practices	• Incident Response Life Cycle • Protection • Incident Response Governance • Incident Response Reporting

Transversal Topics: **Third Party Resilience Assessment**

Cyber Resilience Self Assessment Steps

1

- ITU provides the DFS Cyber Resilience Toolkit to national regulators.
- As regulators receive the Cyber Resilience Toolkit, they can initiate a self-assessment

2

- Identification of DFS Critical Entities based on the provided Identification Matrix.
- National regulators share the Cyber Resilience Toolkit to the identified entities and ensure transparency with all relevant stakeholders.

3

- The regulators provide information and assistance to entities as they complete their self-assessments.
- Entities share the results with the DFS Regulators and take part in workshops/seminars if required.
- Regulators gather the information and aggregate data to calculate the overall national DFS resilience level

4

- Based on the provided information and calculated result, regulators identify mitigation measures and provide guidance to strengthen cyber defences and enhance the DFS ecosystem's resiliency level

How the results would be interpreted and displayed

Data Aggregation

ILLUSTRATIVE

Name	Role	Overall Score	Pillars					
			Risk Management	Governance	Testing	Training and Awareness	Protection	Incident R

	Name	Role	Overall Score	Pillars					
				Risk Management	Governance	Testing	Training and Awareness	Protection	Incident Response
Entity A	Entity A	Telco Entity	3	3	2.5	3	3.5	2	4
Entity B	Entity B	Financial Entity	2.5	2.5	3	3	2	2.5	2
Entity C	Entity C	Telco Entity	3.5	4	2.5	4	4	2.5	4

The regulator aggregates the information sent by the relevant entities to understand the overall **ecosystem's cyber resilience level**

Data Analysis

ILLUSTRATIVE

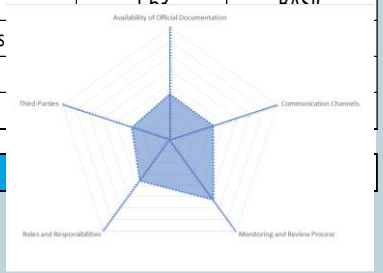
Pillar	Resiliency Score	Resili
Risk Management	2,25	INTERMEDIATE
Governance	1,83	BASIC
Testing	1,36	BASIC
Training & Awareness	2,05	INTERMEDIATE
Protection	1,89	BASIC
Incident Response	2,35	INTERMEDIATE
Overall	1,95	BASIC

The regulator assesses the data and **granularly reviews** the entities' analysed pillars to understand what are the **weaknesses and vulnerabilities**

Data Interpretation

ILLUSTRATIVE

Subpillar	Resiliency Score	Level
Availability of Official Documentation	1,63	BASIC
Communication Channels	1,63	BASIC
Monitoring and Review Process		
Roles and Responsibilities		
Third-Parties		
Governance		



The data is interpreted and presented to facilitate the definition of **operational roadmaps** for the short, medium, and long-term.

Results assessment summary: Cyber Security Resilience Assessment toolkit

Results Summary

This section provides an overview of the results and lays the foundation for a mitigation roadmap to be identified, structured, and presented to the decision-maker. All results presented here aggregate the sub-pillars of each methodological question. For a more granu results, the user is advised to review the results in the radar charts section.

Pillar	Resiliency Level
Risk Management	2.00
Governance	2.30
Testing	1.00
Training & Awareness	3.00
Protection	2.44
Incident Response	2.60

Overall score	2.22
