

# IoT Technologies and Applications for Smart Sustainable Cities

**Vimal Wakhlu**

Former Chairman & Managing Director, TCIL

**Member**

**U4SSC-United for Smart Sustainable Cities – an initiative of ITU and UNECE**

# What is a Smart Sustainable City ?

‘A smart sustainable city is an **innovative city** that **uses** information and communication technologies (**ICTs**) and **other means** to **improve quality of life, efficiency of urban operation and services, and competitiveness**, while ensuring that it meets the **needs of present and future generations** with respect to **economic, social, environmental** as well as **cultural aspects**’

-ITU and UNECE

# UN Habitat New Urban Agenda 2030

Aims to promote the establishment of **Smart Sustainable cities**, as these would be hub of economic activity the world over

- **Principles for a new Urban Paradigm**
- **Principle 1: Socially inclusive and engaging**
- **Principle 2: Affordable, accessible and equitable**
- **Principle 3: Economically vibrant and inclusive**
- **Principle 4: Collectively managed and democratically governed**
- **Principle 5: Fosters cohesive territorial development**
- **Principle 6: Regenerative and resilient**
- **Principle 7: Shared identities and sense of place**
- **Principle 8: Well planned, walkable, and transit-friendly**
- **Principle 9: Safe, healthy and promotes well-being**
- **Principle 10: Learns and innovates**
- **Leverage ICT technology** for meeting these objectives

# Dimensions of a Smart City

# Dimensions of a Smart Sustainable City

1. Smart Planning
2. Policy Standards & Regulations
3. Smart Living
4. Smart Mobility
5. Smart Environment
6. Smart Economy
7. Smart Governance
8. Smart People
9. Key Performance Indicators

# What is sustainability ?

- In plain words , sustainability is the process of living in harmony with our ecosystem
  - Environmental protection
    - Flora/ Fauna
    - Environment – Air/water
  - Development of people of all walks of life
    - Social
    - Culture
    - Traditions
  - Economic development
    - Inclusive
      - Kashmir – Japanese delegation

# Why is sustainability important ?

- **Whatever we do today should work for tomorrow as well !**
- If we undertake a **project/program** without considering tomorrow, then that project program can not be sustained
- Many civilisations have perished as at some point of time they drifted from their sustainability pledge
  - Indus Valley civilisation
  - Civilisation on the banks of Saraswati river
- **In case we do not wake up still, nature is going to terminate us too !**

# Sustainable Development Goals (SDGs)

# Indian Scenario – Smart Cities

- Started in 2015
- 100 cities have been identified
- Some cities have started working on ICT related solutions
- Challenges
  - **KPIs** (Key performance Indicators )not being followed
  - Efforts at replicating the advanced cities
  - The consultant plays a key role in deciding what all the city should have
  - Stakeholders are driven on a predetermined path , while under an illusion that it is they are the decision makers
- Sustainability has taken a back seat.

# Challenges faced by Cities in Developing Nations

# Challenges faced by Cities in Developing Nations

- Air Quality
- Waste Management
- Water Management
- Health
- Education
- Energy
- Financial Inclusion
- Disaster preparedness
- Communications
- Security
- Governance deficit
- Corruption

# Challenges faced...

## **Water Management**

- Next world war over water ???
- Conservation of water
- Equitable distribution and accountability
  - Political intervention
  - Corruption
- Preservation of perennial rivers
  - Clean Ganga ?

# Challenges faced...

## Health

- Health in Rural areas
  - 1.25 Billion people-70% population lives in villages
  - 6,50,000 villages
  - A total of 150,000 total doctors in the country
- Other challenges
  - Mother and Child care- Prenatal and Post Natal
  - Tracking and tracing patients
  - Chronic patients
  - People with special needs- Epilepsy
- Maintenance of Citizen's Health records
- CME for Doctors and Nurses

# Challenges faced...

## **Education**

- Schools in the Rural India ?
- No. of Teachers
- Quality of Teachers
- Content
- Higher Education
  - 100% cut off – Delhi University
    - Are the students below 99% good?
    - Is it the fault of the University ?

# Challenges faced...

## **Disaster Preparedness**

- Disasters a big challenge
  - Terror attacks
  - Earth quakes
  - Tsunami and Floods
  - Collapse of Buildings
  - Collapse of Flyovers

# Challenges faced...

## **Financial Inclusion**

- No banks in Rural Areas
- Local Money lenders/ Middlemen
- Glaring difference in quality of life in Rural and Urban India
  - Migration of populations from villages
  - Creation of slums in cities

# Challenges faced..

## **Governance deficit**

- No single window clearances
  - Multiple departments
- People have to move from pillar to posts to get their basic entitlements
  - Land records
  - Ration cards
  - Passports
  - Birth /Death certificates

# Challenges faced...

## Corruption

- **Premium** for all services
  - Driving licence
  - **Death Certificates!**
- Growth of middlemen
  - Land mafias
  - Land scams
- Toll collection
  - A tale of two states !

# Challenges faced...

## **Communications**

- A primary requirement for development
- Poor Rural Tele-density
- Poor back haul connectivity
- Broadband Network challenge
- BB a must for any form of electronic service

# Mitigation of Challenges leveraging Technology

# Role of IoT in Mitigating challenges

## Environment

### ➤ Air pollution management

- Automated PUC monitoring & Control
  - IoT devices for Monitoring

### ➤ Water Management

- Controlled water distribution
  - IoT managed
- Cleaning of rivers
  - IoT devices for Monitoring & Control of effluents
    - ❖ **US \$ 30000** for imported devices

# Role of IoT in Mitigating challenges

## **Green patch management**

- IoT devices for
  - Soil Quality monitoring
  - Controlled irrigation
    - Drip irrigation based on soil condition
  - Fertilizers
  - Pesticides

# Role of IoT in Mitigating challenges

## **Safety and Security**

### ➤ **Road Safety**

- Smart vehicles
  - Prevention of thefts
  - Prevention of accidents

### ➤ **Homeland Security**

- Crime and Criminal Tracking system
- **Non-Clonable ID**

# Role of IoT in Mitigating challenges

## Security

### Non Clonable ID

- Trace and Track
- Security related
  - Delhi Police during CWG 2010
    - Prevention of Suicide attacks
  - Tracking of fertilizer bags
    - Prevention of IEDs
- Documents requiring authentication
  - Fake Passports
- Detection of fake medicines
  - Ghana conference
- Detection of illicit liquor
  - Prevent unwanted casualties

# Role of IoT in Mitigating challenges

## Energy Sector

### ➤ Smart Metering

- No Power pilferages
  - Smart Meter manufacturing
  - Monitoring & Control

### ➤ Solar Micro units

- Village home units - ` 2,500 per househo
  - Light bulb
  - Fan
  - Charger
- Reduced emphasis on Grid supply
- Savings on Transmission losses
- Savings on precious foreign exchange
  - Diesel for Mobile towers

# Role of IoT in Mitigating challenges

## Disaster Management

- **Monitoring of Infrastructure**
  - Bridges
    - Australian experience
  - Flyovers
  - Old Building
- **Inventory Management for Disasters**
- **GIS Mapping of Resources**
  - Gas pipe lines
  - Water supply
  - Electric cables
  - Communication cables

# Mobility

- Road Safety
  - Smart vehicles – IoT Controlled
    - **Prevention of accidents**
  - Autonomous vehicles
    - Challenge Uber model
- Intelligent Traffic Management System
  - AI/ IoT System based
- Information dissemination system
  - Metros
  - Busses
- Huge transportation implications
  - Pollution of the environment

## SDG – 8

# Air Quality Management

- Individual vehicle Exhaust Monitoring – IoT based
- No polluting Industries around
- Non Conventional Sources of Energy
  - Solar
  - Wind
  - Fuel Cell based

**SDG 11 / SDG 13**

# Water Management

- Recycling/Green patches – Drip Irrigation – IoT based
- Drinking water/ Water ATMs
- Water Harvesting
  - Rain Water
  - Sewage treatment
  - Saline Water utilization
- Monitoring Pollution- IoT based, Centralised
  - Effluents
  - Industries

- **SDG – 6/ SDG 11**

# Solid Waste Management

- General Solid Waste Management – **Is Indore the role Model?**
- Decentralized Units
- Garbage Segregation
- Effluent Treatment plants
  - Centralized Monitoring – IoT based
- Generation of Fertilizers (organic)
- Aerobic/Anaerobic Toilets
- e-Waste Management
- Processing Plants for proper disposal
- Reduction in Hardware requirements

## SDG 6/ SDG 11

# Housing

- **Vaastu Shastra - Ecofriendly**
  - Low heating / cooling requirements
- **Bhutan Example**
  - Natural light 12 hours a day
  - Heating/cooling solar and wind
- **Others**
  - Hollow bricks
  - Local Materials – Prashank
- **Inclusive – UN Habitat 2030**
  - Houses for the domestic and industrial help within each of these housing complexes (**Dharavis to be prevented**)

## SDG – 1 / SDG 11

# Agriculture

- Clusters around cities
  - Chandigarh city– Le Corbusier
- Food/ Vegetables (Local produce best for the area)
- Animal Farms
- Controlled Irrigation – IoTs based
- **PURA**(Providing Urban amenities in Rural Areas ) important to ensure inclusive development
  - Dr. Abdul Kalam’s vision
  - Financial Inclusion
  - Prevention of Infrastructure overload in cities

- **SDG – 1/SDG – 2/ SDG – 8**

# Health

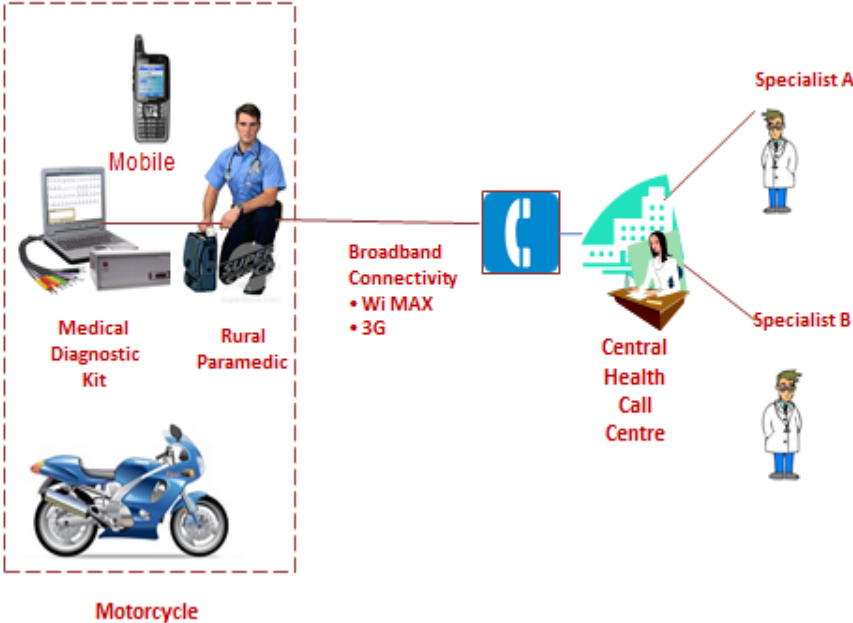

- Smart Ambulances
  - Monitoring of critical patients enroute to hospitals
- Citizen Health Record
- People with special needs – IoT monitoring
  - People with Epilepsy
- Promotion of Local medicines
  - Learn from tribals
- Mother and child care – mHealth
- Chronic Patient Management
- Rural Telemedicine

## SDG – 3

# Health

## Concept of Rural e-Health in PPP Model

## Pathological Kit

# Health

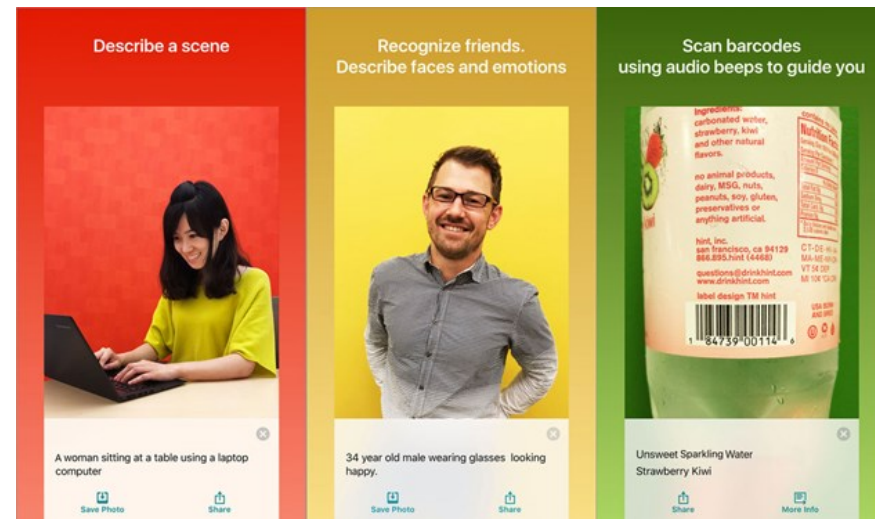

- **Ingestible sensors**
- **Remote monitoring** of patients
- **Implantable Continuous Glucose monitoring system**
- Open **artificial pancreas** system
  - Controlling diabetes
- Managing **Parkinson's disease**

# Health Sector

## -Physically challenged

- Visual disability is one of the biggest challenges an individual can face.
- There are three facets to this challenge:
  - Recognize friends/ Describe faces and emotions
  - Understanding the product/ services details while shopping
  - Describing a scene
- Path breaking solution from
- **Microsoft – Seeing AI**

- <https://www.youtube.com/watch?v=R2mC-NUAmMk>

# Education

- Objective of education
  - Inclusive
  - Equitable
  - Equal Opportunity
- e-Networks
  - Maintain quality throughout (No long distance schooling)
- Digital Libraries
- IoT Enabled classroom boards
- **SDG – 4/ SDG – 5/ SDG – 8**

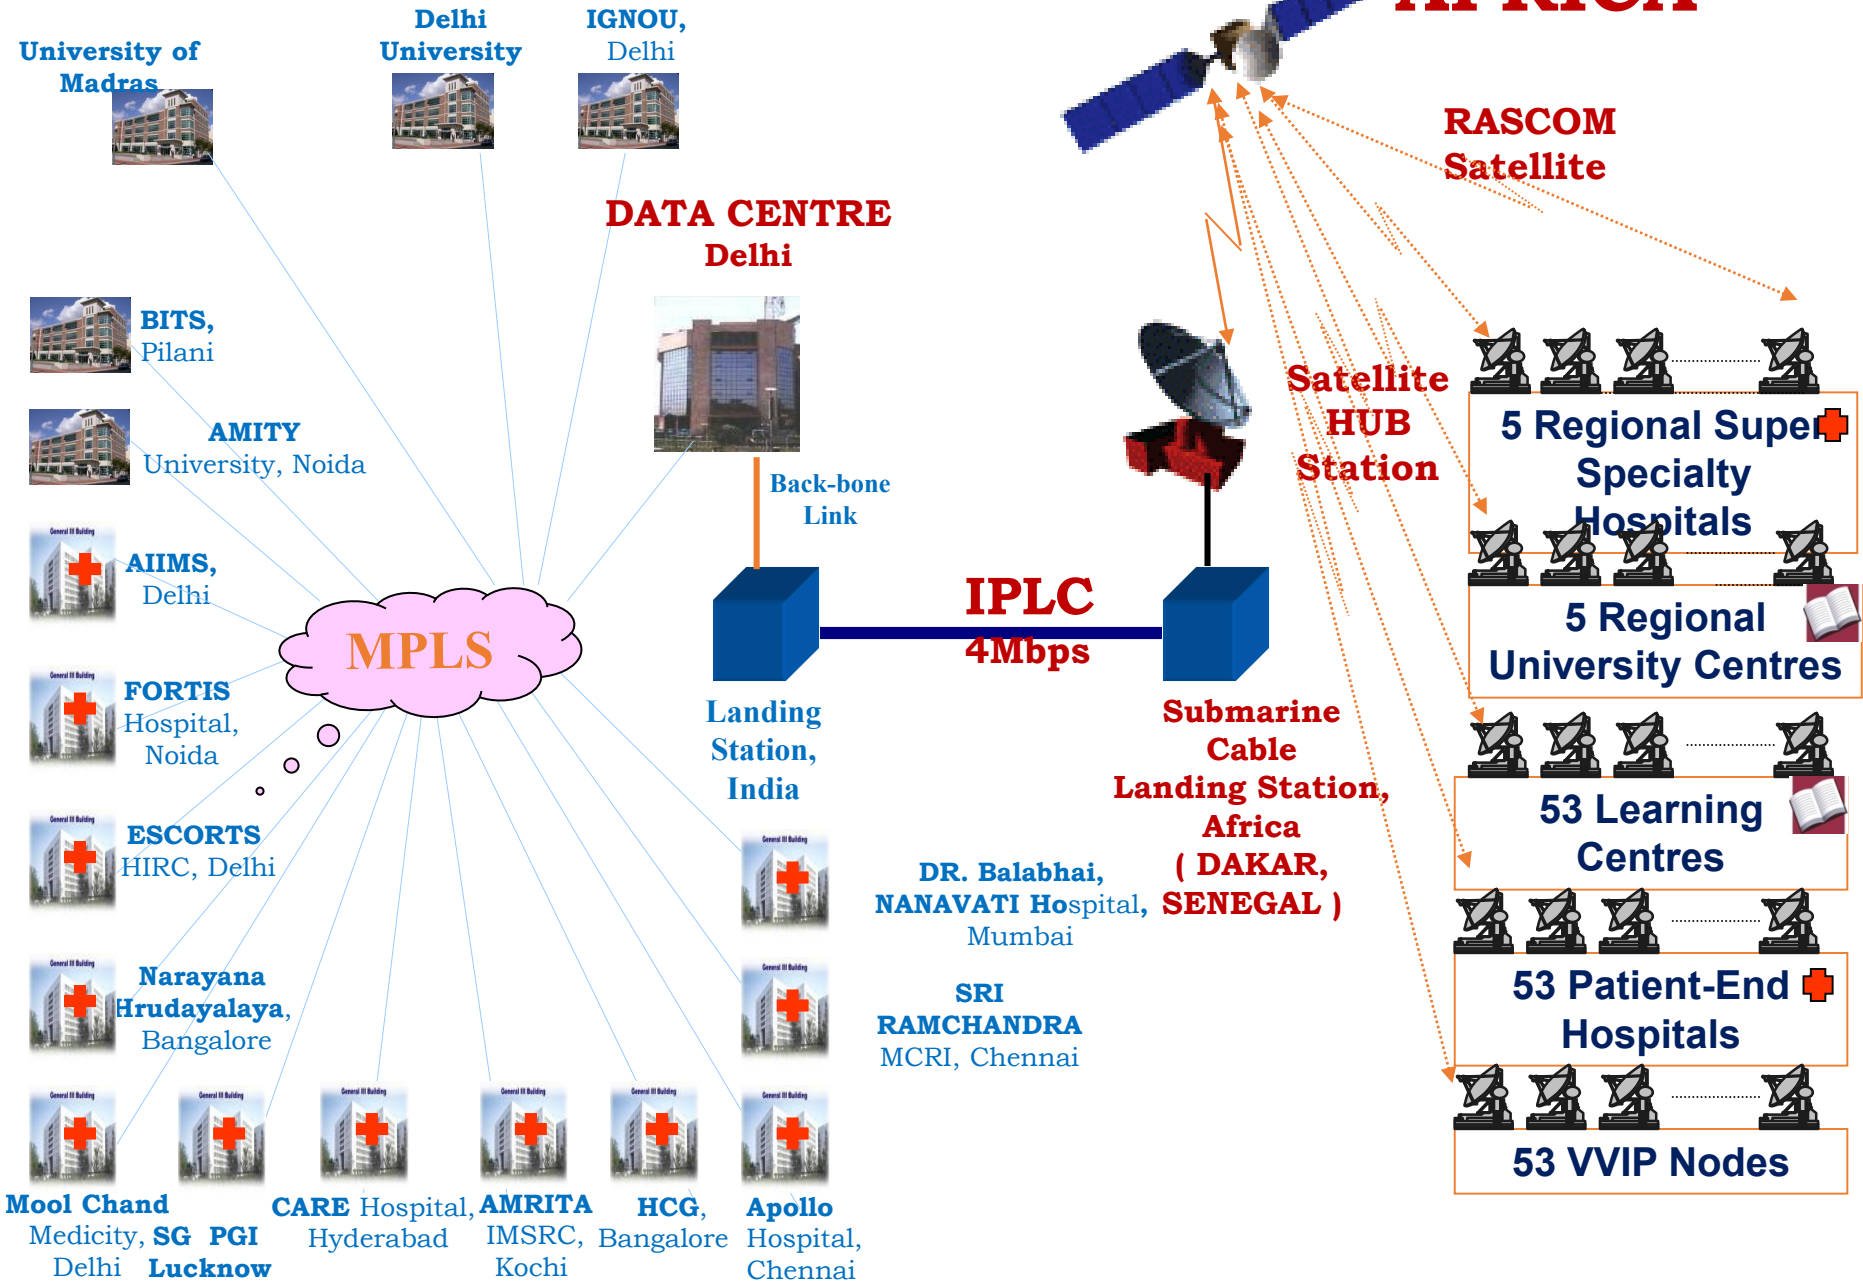

# Education

## e- Networks

- Virtual Classrooms
  - Pan Africa
  - UNOM
  - SAARC
- Collaborative research/ 'Centers of Excellence' replication
- Digital content /Digital Libraries
- Skill Development – 'Learn as you Earn'
- Employability enabling courses

# INDIA

# AFRICA

## ARCHITECTURE OF PAN-AFRICAN e-NETWORK

# Source of inspiration.....

# Governance

- Land records
  - GIS mapping
- Infrastructure
  - GIS mapping
- Citizen Centre- Online
  - With SLA conditions
- **SDG 11**

# Safety and Security

- Women/Children – Safety
  - Panic button in mobile
  - CCTV cameras in the city – IoT Controlled
- Terrorist threats
  - Non clonable IDs
- Crime and Criminal Tracking System
- Big Data Analytics
  - Preventive measures for controlling crime
- No slums like Dharavi – biggest slum in Asia
- \*Dharavi – Hub of organized crime

## SDG – 5

# Communications

- LTE/4G Networks
  - Less energy consumption
  - Use of Solar energy
- FMC –Fixed Mobile Convergence
  - Less no of Mobile Towers
  - Less energy consumption
  - Lower Non Ionizing Radiation
- Continuous monitoring of EMF radiation in the town

# Growth of Flora/Fauna

- Local Trees/Plants -IoT monitoring
- Regular planting of trees
  - Special Monsoon drive in Delhi
- Maintenance of the ecosystem for the Fauna

**SDG 11 / SDG 13**

# Energy

- Natural Lighting
- Smart Lighting
  - Human presence based
- Smart cooling/heating
- Smart metering. – IoT
  - No Power pilferages
- Grid linked Reverse metering
  - Back feeding to the grid from individual households during low consumption periods

# Energy (2)

- Smart Grids
- Solar Energy
  - Mini/Micro Units.
- Cooking
  - Solar
  - Piped gas - controlled (IoT)

Reliability – 3/4 days of autonomy

## SDG 7

# Financial Inclusion

- Bank to Mobile direct transaction- m Banking
  - Postal Rural ICT devices-not at the mercy of postmen !
- Separate Bank A/Cs for all
  - Jan Dhan Yojana in India
- Accessibility to Finances
  - Financial Transactions using Bhim/PayTM/mPaise
- Equal work equal pay
  - Payments only into individual accounts
    - Monitoring by enforcement agencies

- **SDG – 1/ SDG – 5 / SDG – 8**

# Economic Growth

- Generation of employment opportunities
  - Through intense economic activity
- Increased Employability of young population
- Policy measures

## SDG – 8

# Infrastructure and industrialization

- **Resilient Infra**

- Transportation/Roads/Railways/ Cycle lanes
- Bus services
- City Centres

- **Industrialization**

- Support localized industries
- Incentives for local products

- **Innovation**

- Create Centers of excellence linking Educational Institutions with the Industry
- Ancient knowledge dissemination to be encouraged
  - Egyptian Pyramids
  - Concept of Time – Indian literature

- **No need to reinvent the wheel**

## SDG – 9

# Wholesome World

- **Knowledge Dissemination**
  - Sharing of Knowledge
  - Sharing of best practices
  - Sharing resources
- Antithesis of Protectionism
- ***Vasudeva Kutumbakam***
  - Not only humans, but the whole environment included
- **Reduce inequality within and among countries**
- **More people like**
  - Wilhelm Rontgen (X Ray)
  - Jonas Salk (patent free polio vaccine)
- Innovations for the welfare of the world

## SDG – 10

# Conclusions

- **Smart Environment**

A decentralised approach to

- Waste Management
- Water Management
- Energy- Solar
- Housing for the domestic help

A Centralised IoT based mon./Control system

- Air Pollution
- Effluent treatment

- **Smart Living**

- All new public private buildings with net Zero waste production
- All new buildings with Zero energy requirements
- Incentives for all old buildings for switching over to Net Zero waste/ Zero energy requirements

# Conclusions

## **Lesser the better**

- **Sustainability** lies at the very core of survival of this world
- **Smartness** lies in making do with as less resources, as possible in our cities without compromising on the **Quality of Life**.
- Our current resources should be able to sustain our future generations
- Redeployment of resources is also a way of ensuring sustainability.
  - Circular economies/ cities
- Sustainability should be an integral part of Project Planning Process stage itself
- **Leveraging technology** is the way out !
- **IoT** Can play a big role in this

# About United For Smart Sustainable Cities (U4SSC)

# United 4 Smart Sustainable Cities (U4SSC)

**U4SSC is a United Nations Initiative** coordinated by ITU and UNECE and supported by other 14 UN agencies to respond to the Sustainable Development **Goal 11:**

**"Make cities and human settlements inclusive, safe, resilient and sustainable."**

It advocates for public policy to encourage the use of ICTs to facilitate and ease the transition to smart sustainable cities.

## Supported by:

# U4SSC publications

Available for free on the U4SSC website:  
<http://itu.int/go/U4SSC>

# U4SSC Key performance indicators for Smart Sustainable Cities

The U4SSC Initiative has developed a set of international **key performance indicators (KPIs) for Smart sustainable cities (SSC)** to establish the criteria to evaluate ICT's contributions in making cities smarter and more sustainable, and to provide cities with the means for self-assessments.

**Over 50 cities worldwide are already implementing these KPIs**

# U4SSC current work

## U4SSC is currently working on the following deliverables:

- Guidelines on tools and mechanisms to finance SSC projects
- Guidelines on strategies for circular cities
- City science application framework
- Blockchain 4 cities
- Guiding principles for artificial intelligence in cities - New
- The impact of Artificial Intelligence and cognitive computing in Cities - New
- The impact of data processing and computation in cities - New
- **The impact of sensing technologies and IoT in cities - New**

# U4SSC work on Sensing Technologies and IoT

Aspects of IoT covered include:

- Robotic – Drones
- City IoT
- Wearables
- Environment Monitoring
- Indoor positioning
- Mobility positioning
- Integrated sensing
- Smart manufacturing/Industry 4.0
