# PRACTICAL ASPECTS OF ONLINE BROADBAND MAPS - HOW TO CHECK AVAILABILITY OF BROADBAND SERVICES?

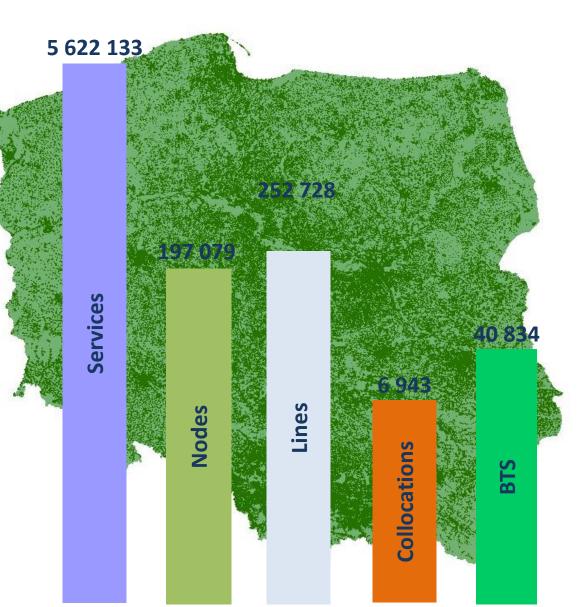

- 1. THE CONCEPT
- 2. STATISTICS
- 3. USER'S GUIDE
- 4. HOW THE TOOL FUNCTIONS?
- 5. BENEFITS

The database with online maps is a comprehensive and up-to-date information tool about **broadband** services and telecommunication infrastructure in Poland

**Broadband search engine** allows to present availability of the fixed **broadband services** with maximum offered

bandwith like:

- Internet access,
- Maximum link speed,
- TV service,
- Phone service.

Broadband search engine allows users to report demand on broadband services that will be sent to

the companies further on.

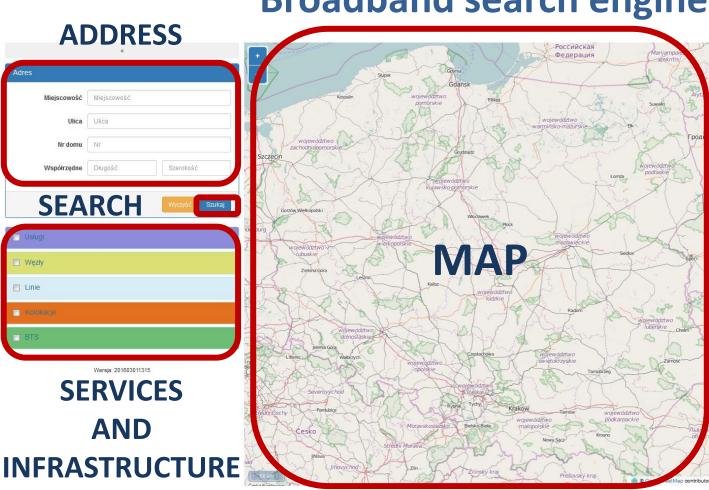

Broadband search engine allows entrepreneurs to present telecommunication infrastructure elements like:

- telecommunication active nodes and passive conncetion points
- logical representation of the links between nodes
- colocation spaces
- BTS's locations, radio permits

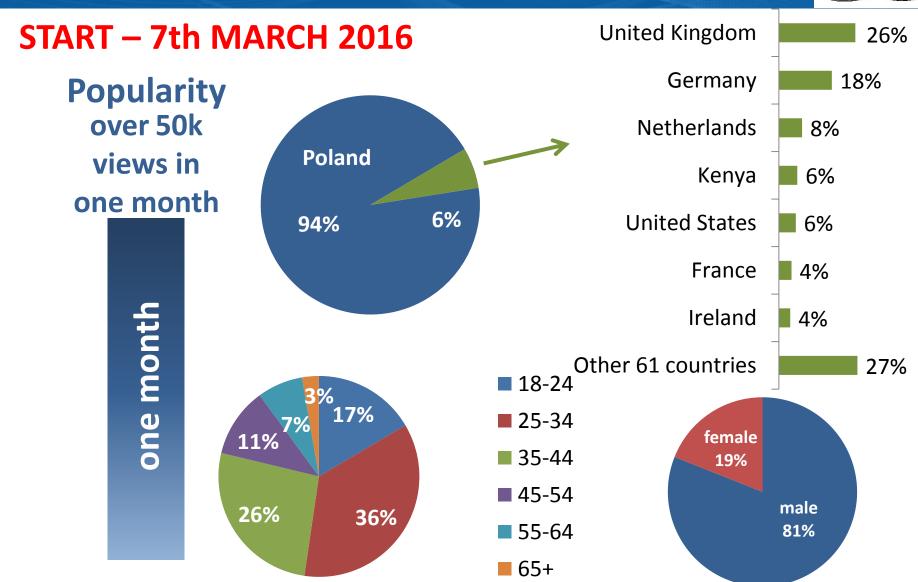

**Broadband search engine**
