LEFKIPPOS

THE TECHNOLOGY PARK OF ATTICA

- New Buildings
- New Building (replacement of old construction)
- Renovation of Existing Infrastructures

- Previous generations 2G/3G/4G of mobile technologies satisfied **human** communications :

- voice
- Data
- Internet

Vertical sectors to be benefited :

- 5G equally aims for **industrial** communications to help :
 - digitise the economy and
 - contribute towards global digital transformation.

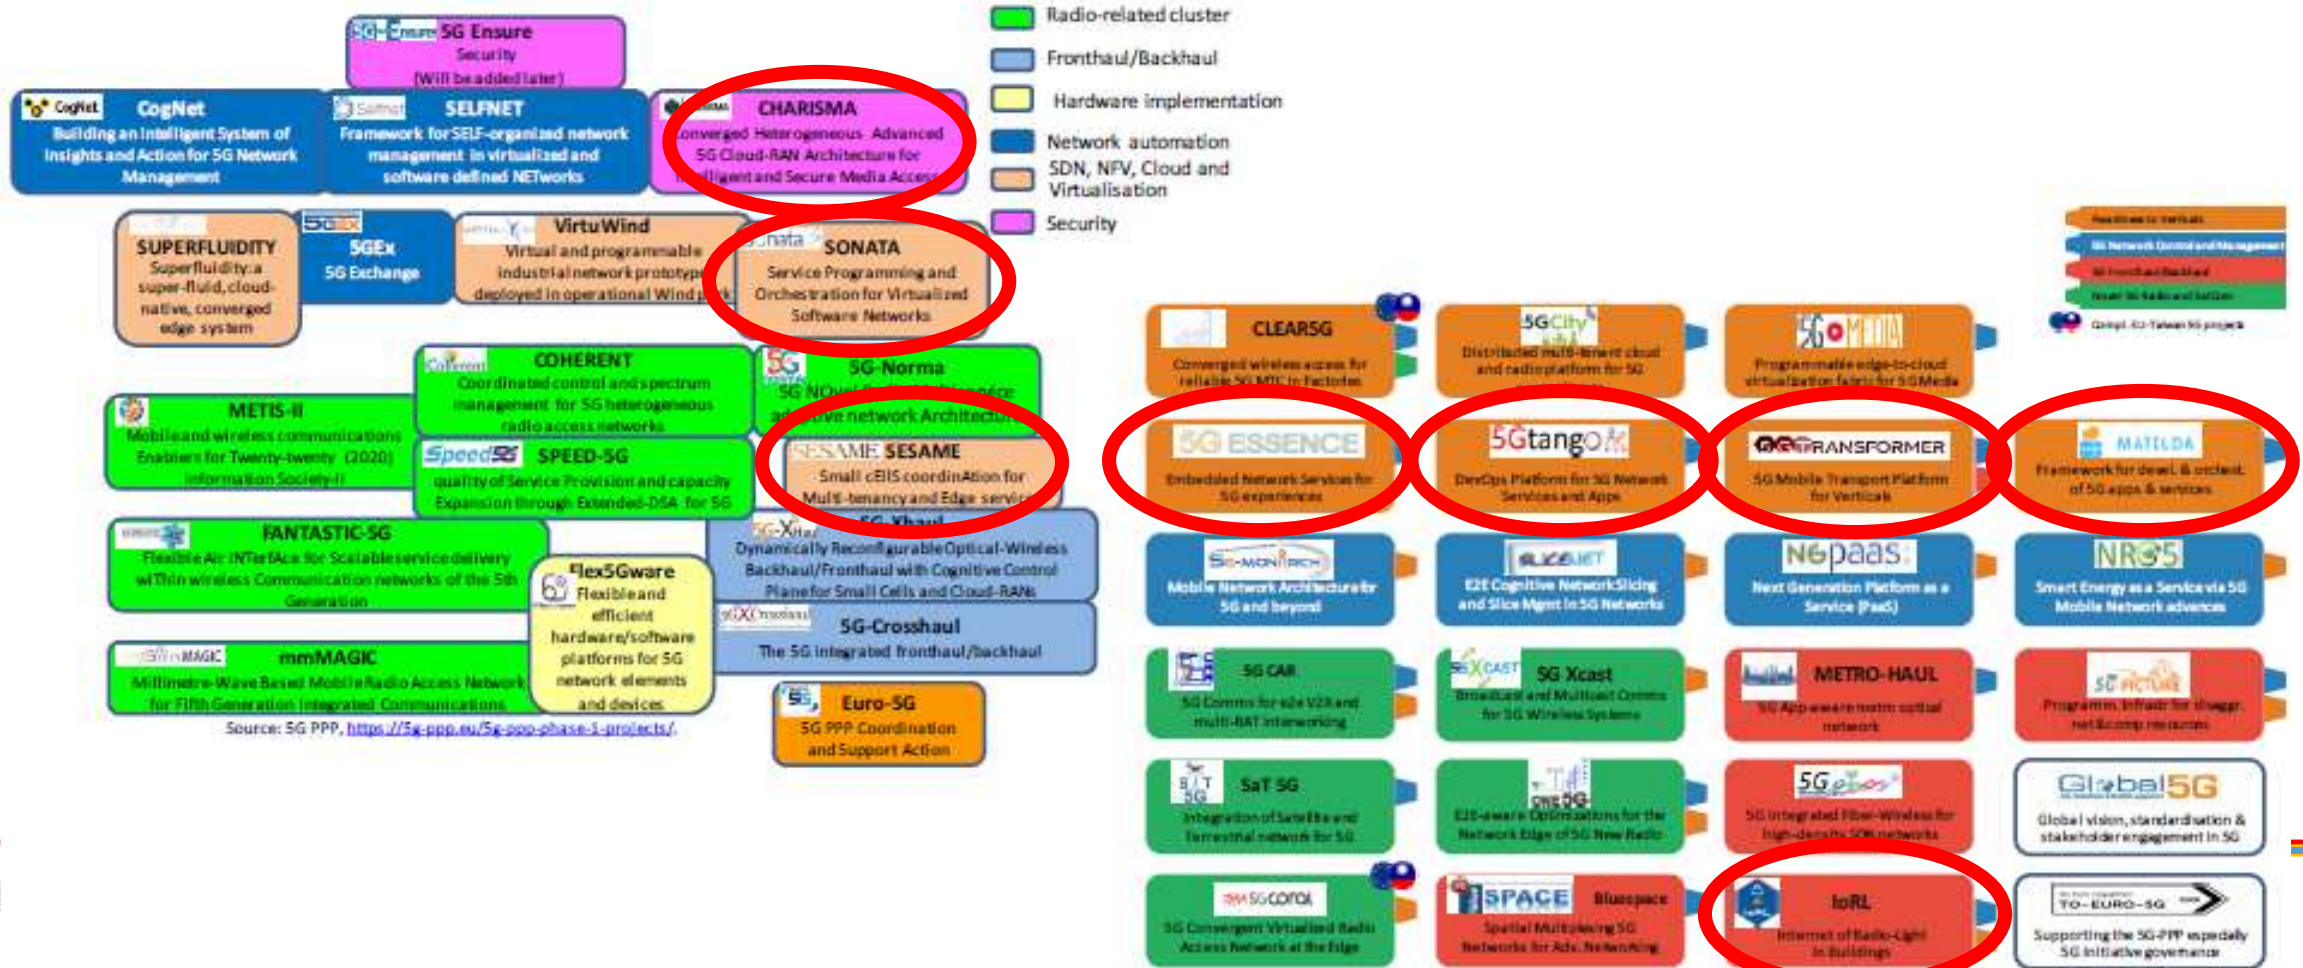

In this view, EU has launched 5G-PPP framework to support this transition.
5G-PPP anticipates for three phases

NCSR DEMOKRITOS is actively involved in all three phases

NCSR DEMOKRITOS participation in Phase 1 & 2

PPP Phase 1 & Phase 2 Projects

5G PPP Phase 3

> € 200 millions for trials

5G R&I for "Long Term Evolution"

User needs, partnerships with vertical industries

ICT-19 Focus

ICT-17 E2E 5G platforms
Kick off at EUCNC 2018

Phase I Core Technologies

Phase 2 - Demos
PoC* - Core Techs
Components

5G Connected Cars in EU:
Cross border corridors

Phase 3 a) Verification
Demo/Trial Platform
- Integration radio+ network

Phase 3 b) Integrated Verification Trial
- radio+network+applications -

Three projects were selected for funding

NCSR D Project Manager in 5GENESIS

5GENESIS 5G platforms

- The Athens Platform
- The Malaga Platform
- The Limassol Platform
- The Surrey Platform
- The Berlin Platform

The objective is to :

- Validate core 5G technologies and architectures in the context of specific vertical use cases and deployment scenarios and for differentiated performance requirements
- Draw viable business models for innovative digital use cases across multiple sectors
- Contribute towards standardisation bodies
- Validate relevant KPIs linked to specific vertical sectors

The Athens platform extends in three points of presence, one of which is within the NCSR campus

The Athens platform extends in three points of presence, one of which is within the NCSR campus. The diagram illustrates the network architecture connecting the COSMOTE premises, the Municipality of Egaleo Stadium, and the NCSR "Demokritos" campus.

Legend:

- Fiber link (Red line)
- EPC (Yellow line)
- Small Cell (Blue dot)
- Macro Cell (Green dot)

Map Labels:

- COSMOTE premises
- Municipality of Egaleo Stadium
- NCSR "Demokritos" campus
- Microwave link / VPN
- Macro Cell
- Small Cell
- EPC

Photographs:

- Radio tower at COSMOTE premises
- Stadium (Municipality of Egaleo Stadium)
- Radio tower at NCSR campus
- Network equipment (Small Cell)
- Network equipment (Macro Cell)

5G technologies developed in NCSR DEMOKRITOS, to be useful for the industry

Among the various R&D fields in 5G, and through its participation in the above 5G projects, NCSR D contributes in :

- Unified infrastructure for networking, computing and storage resources
- MEC (Mobile Edge Computing)
- Small cells
- Network service Orchestration
- Automated DevOps process
- Slicing
- Broadcasting

Outcomes of NCSR DEMOKRITOS research in 5G for the industry (1/3)

- **The integration of networking, computing and storage resources into one programmable and unified infrastructure, easily managed by a MANO entity.**
 - This is useful for network operators due to :
 - cost reduction through human task automation and hardware optimization
 - optimized and more dynamic usage of all distributed resources
 - convergence of fixed, mobile and broadcast services.
 - Exploitation of slicing for providing almost real-time dynamic and isolated slices for each customer according to its requirements

Outcomes of NCSR DEMOKRITOS research in 5G for the industry (2/3)

- The small cell architecture in combination with slicing can form a neutral infrastructure that can be installed by any entity (e.g. on lamp posts by a municipality) and offered to any provider (even to existing network providers) for a specific time slot (e.g. a municipal festival or football game), to increase the capacity in the area and offer specific services with specific requirements.

Outcomes of NCSR DEMOKRITOS research in 5G for the industry (3/3)

- A market place for network function developers and through the DevOps process and automated instantiation towards a new market for SMEs specialized in software
- Slicing with specific QoS requirements to be used by first responders, in case of crisis
- Convergence of NOs and broadcasters (not unicast) towards a live broadcasting environment with efficient backhaul and spectrum usage

Long term plans of NCSRDI in 5G (1/2)

- Participate/contribute in research and development efforts towards 5G and get know-how
- Contribute to standardization bodies and other fora
- Develop/enhance a large scale platform supporting some of the 5G features
- Demonstrate the capabilities and KPIs of the platform
- Organize large scale events (like in the municipal stadium of Egaleo), to demonstrate the capabilities and features of 5G (TBD)

Long term plans of NCSRD in 5G (2/2)

- **Make the 5G platform available** to any interested organization, (state, NOs, broadcasters, industry, companies in Technological park)
- **Notify NOs** (COSMOTE, VODAFONE, WIND)
- **Notify Telecommunications & Post Commission** – (EETT) & Ministry for Digital Policy, Telecommunications and Media of Greece

Expected reactions

- Proposal to EETT for a **National effort towards 5G** and not individual actions
- **NCSR**D to consultant the ministry in the development/deployment plans for 5G
- **Invite NCSR**D in the forthcoming plans for 5G commercial implementation

THANK YOU !!
