ITU Regional Seminar 5G Implementation in Europe and CIS

*Strategies and Policies Enabling
New Growth Opportunities*

3-5 July 2018
Budapest, Hungary

ITU Regional Initiatives for Europe and
CIS on ICT Infrastructure Development

Spectrum Management decisions on the Digital Dividend

Peter Walop (ITU expert)

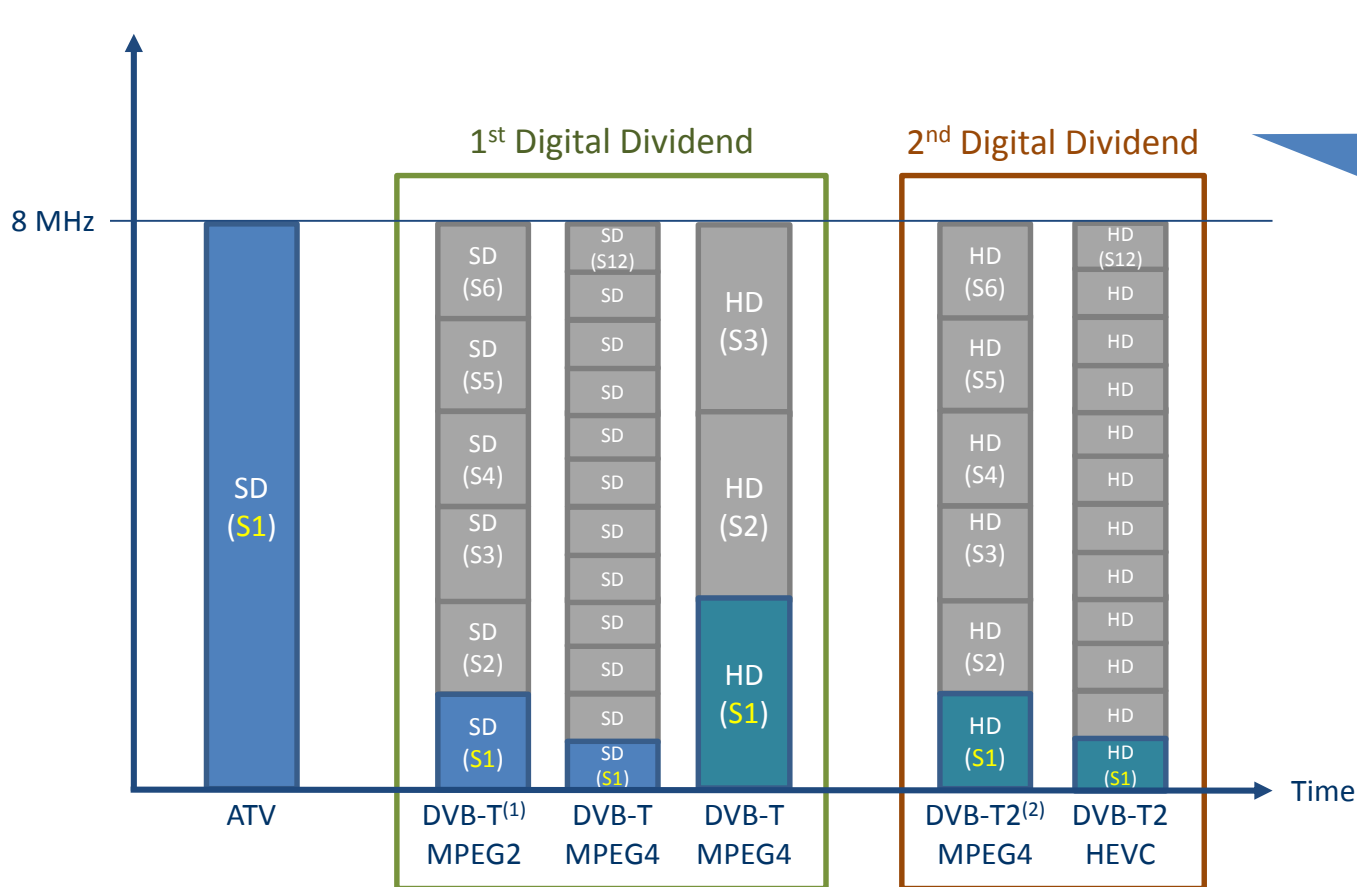

Agenda

Topics

1. Digital dividend allocations
2. Frequency planning

1. Digital dividend allocations

1st and 2nd dividend due to technical improvements

Size (MHz) of DD for LTE also dependent on:
TV services, reception mode, MFN/SFN, stat mux gain, etc.

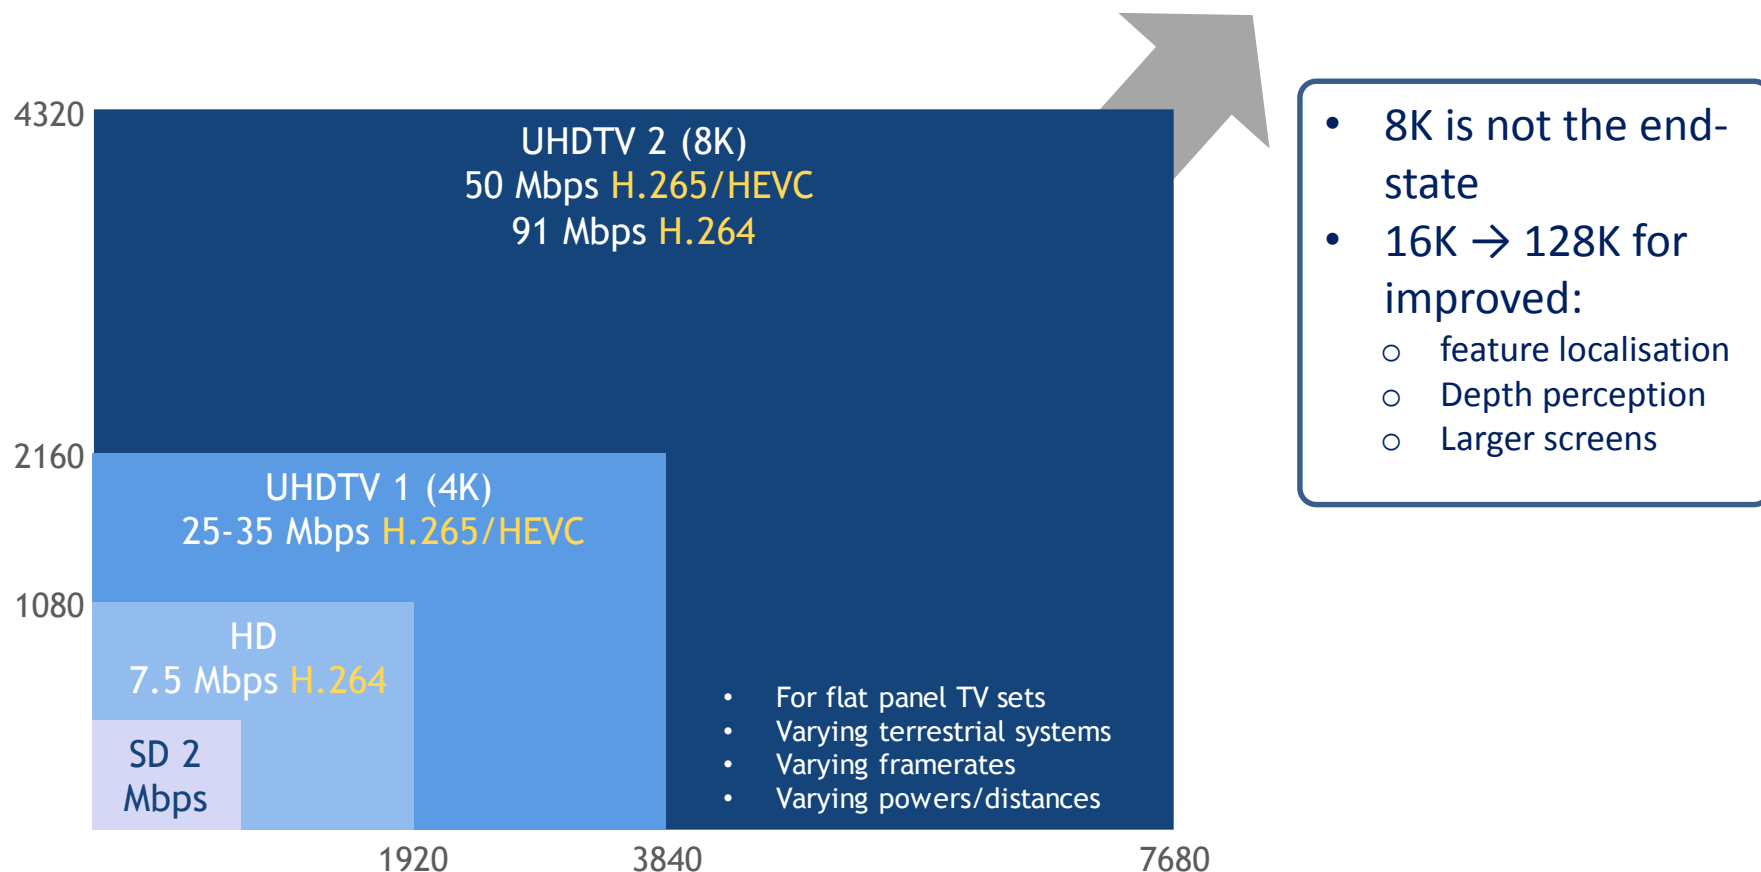

- **WRC-07:**
 - 790-862 MHz (“800 MHz”) in Region 1
 - 698-790 MHz (“700 MHz”) in Regions 2 and 3
- **WRC-12 & -15:**
 - 694-790 MHz (“700 MHz”) in Region 1
 - 610/614-698 MHz (“600 MHz”) in a few countries in Regions 2 and 3

(1) Net bit rate: 24 Mbit/s (64QAM, CR 2/3)
(2) Net bit rate: 40 Mbit/s (256 QAM, CR 2/3)

1. Digital dividend allocations

More capacity needed for higher screen resolutions

Source: ITU

1. Digital dividend allocations

Lack of capacity on terrestrial platforms

(1) Net bit rate: 24 Mbit/s (64QAM, CR 2/3)

(2) Net bit rate: 40 Mbit/s (256 QAM, CR 2/3)

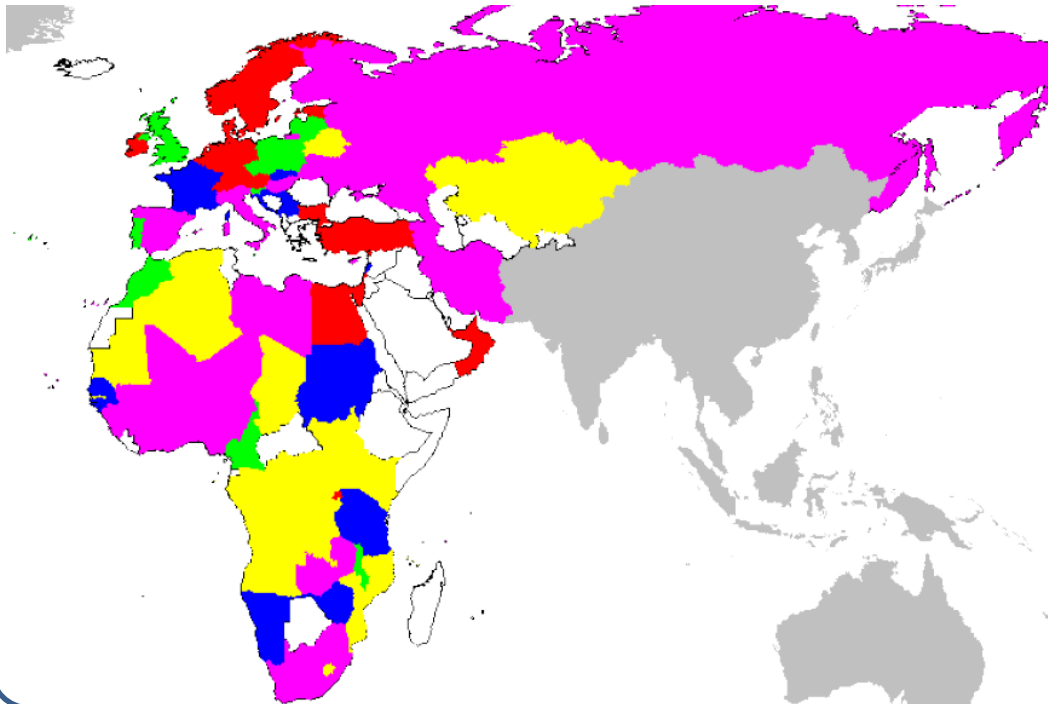

1. Digital dividend allocations

Countries face different decisions for facilitating 4/8K services

Proportion of users who receive television by terrestrial broadcasting

	<25%	≥25 and <50%	≥50 and <75%	≥75%	No reply
Total administrations considered	18	11	11	28	21
Map colour	Red	Green	Blue	Magenta	Yellow

Source: ITU-R Rep BT.2302 (2014)

1. Digital dividend allocations

LTE spectrum allocated at different speeds but trends seems clear

Source: ITU report "Digital Dividend: insights for spectrum decisions" (2018)

2. Frequency planning

Two key frequency planning efforts needed to free-up spectrum

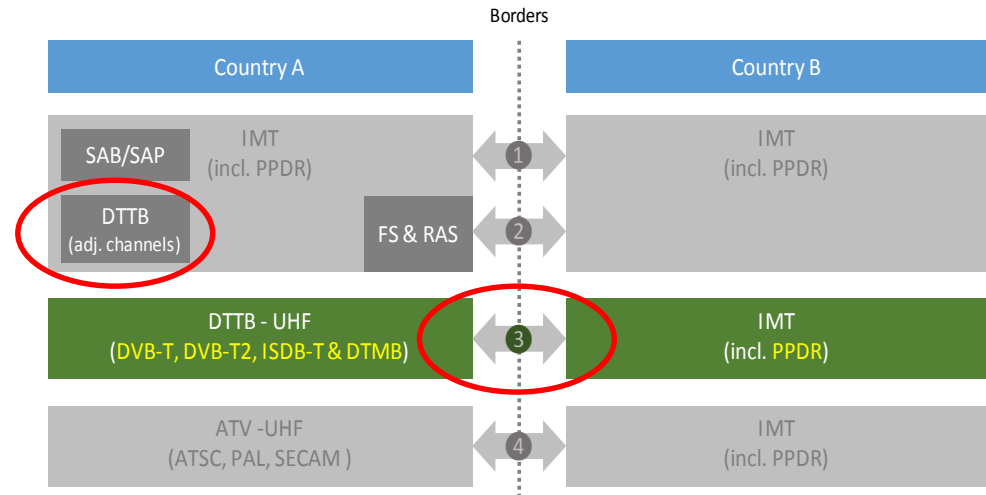

1 DSO/ASO process (Europe)

■ Completed ■ On-going ■ not started ■ Unknown

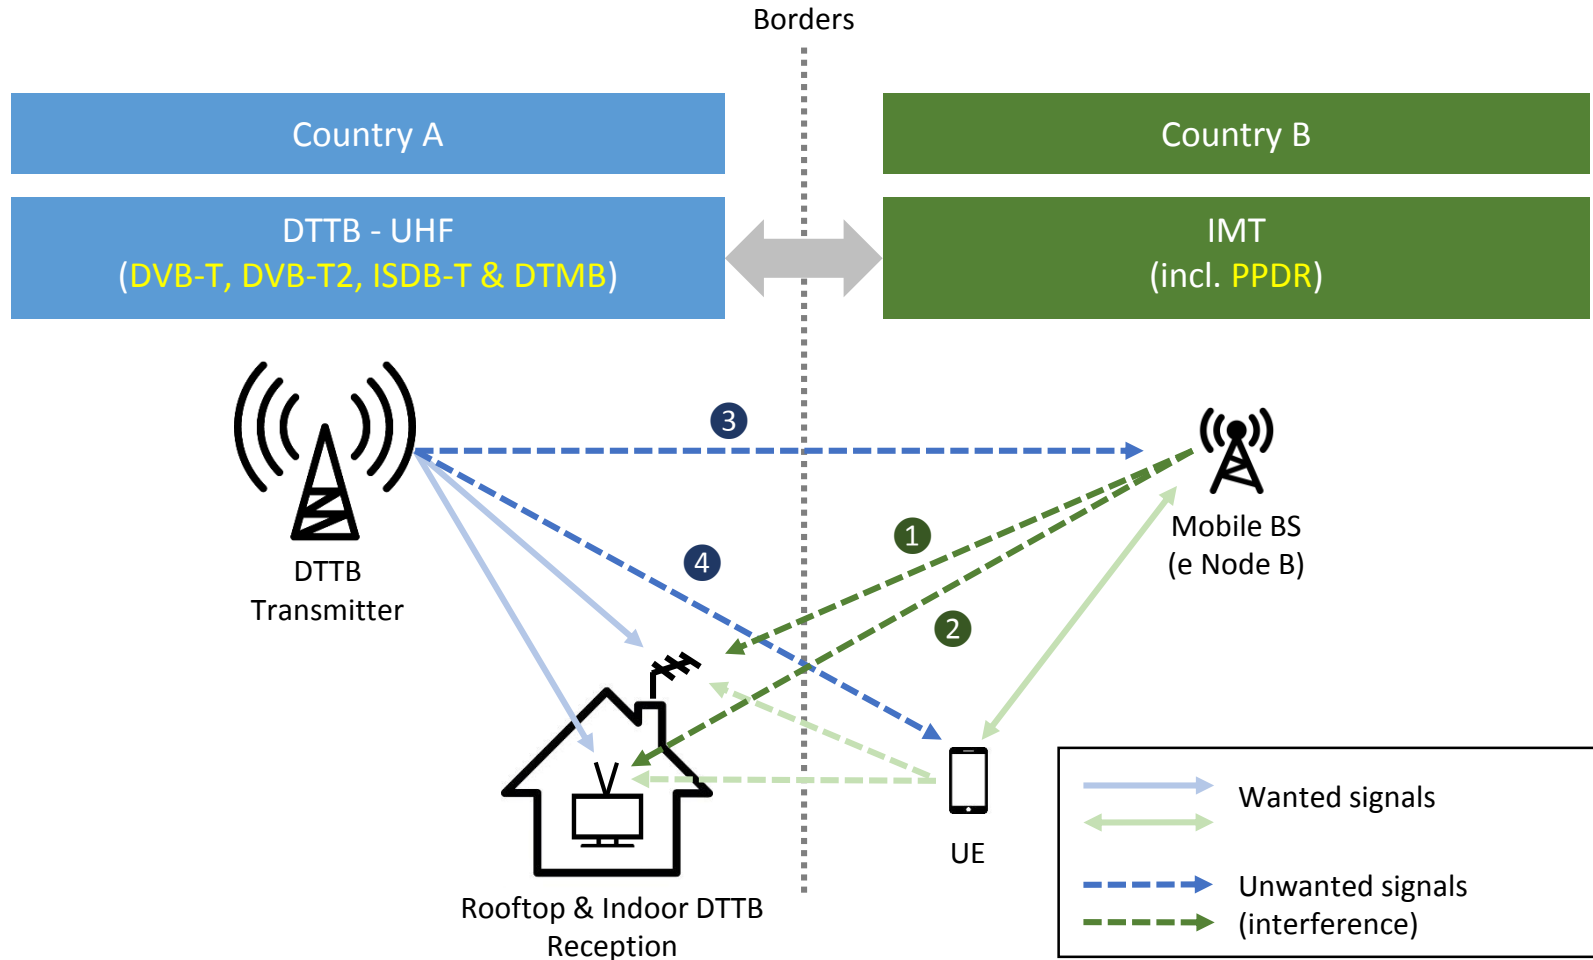

Source: ITU-D "DSO/ASO dashboard"

2 (Cross-border) frequency coordination

2. Frequency planning

Harmful interference to be managed between services & countries

2. Frequency planning

Frequency planning and operational mitigation to be balanced

Interference type	Operational measures					
	1a. Apply filter at LTE-BS TX	2a. Apply filter at DTTB RX	3a. Reposition or change of DTTB rooftop antenna	4a. Reposition or change LTE BS antenna	5a. Reduce ERP of LTE BS TX	6a. Increase distance between UE and DTTB RX
LTE BS TX > DTTB RX (overloading)		✓	✓	✓	✓	
LTE BS TX > DTTB RX (unwanted emissions)	✓		✓	✓		
DTTB signal > LTE BS TX (overloading)		✓	✓	✓	✓	
DTTB signal > LTE BS TX (unwanted emissions)		✓	✓	✓	✓	
DTTB signal > LTE UE TX (overloading)					✓	
DTTB signal > LTE UE RX (unwanted emissions)	✓				✓

NRAs make trade-offs between:

1. Imposing technical requirements (e.g. BS filtering) and re-planning stations during deployment
2. Applying operational measures (e.g. distributing consumer filters)
