

Streamlining countries digital transformation through GovStack

Diverse but united by the same goals

Increase the speed of service delivery

Avoid duplication of efforts, reduces cost to develop new e-gov. services

Provide a connected, consistent and seamless user experience

Design and deliver new services quickly to respond to needs

Enable integrated transactions and exchange of information across other equivalent systems

Enable aggregation of big data for richer insights that would help improve the policymaking process

Minimize vendor 'lock-in' and allow independent services to run without impacting overall experience

Countries struggle with the digitization of their public services for several reasons

Siloes

Siloed investments and **duplicative efforts** by development partners promote fragmented digital governance and silos in partner countries.

Funding

Challenges in **procuring and implementing affordable IT solutions** persist, as do challenges in **creating the necessary capital** to invest in ICT infrastructure projects.

Scaling

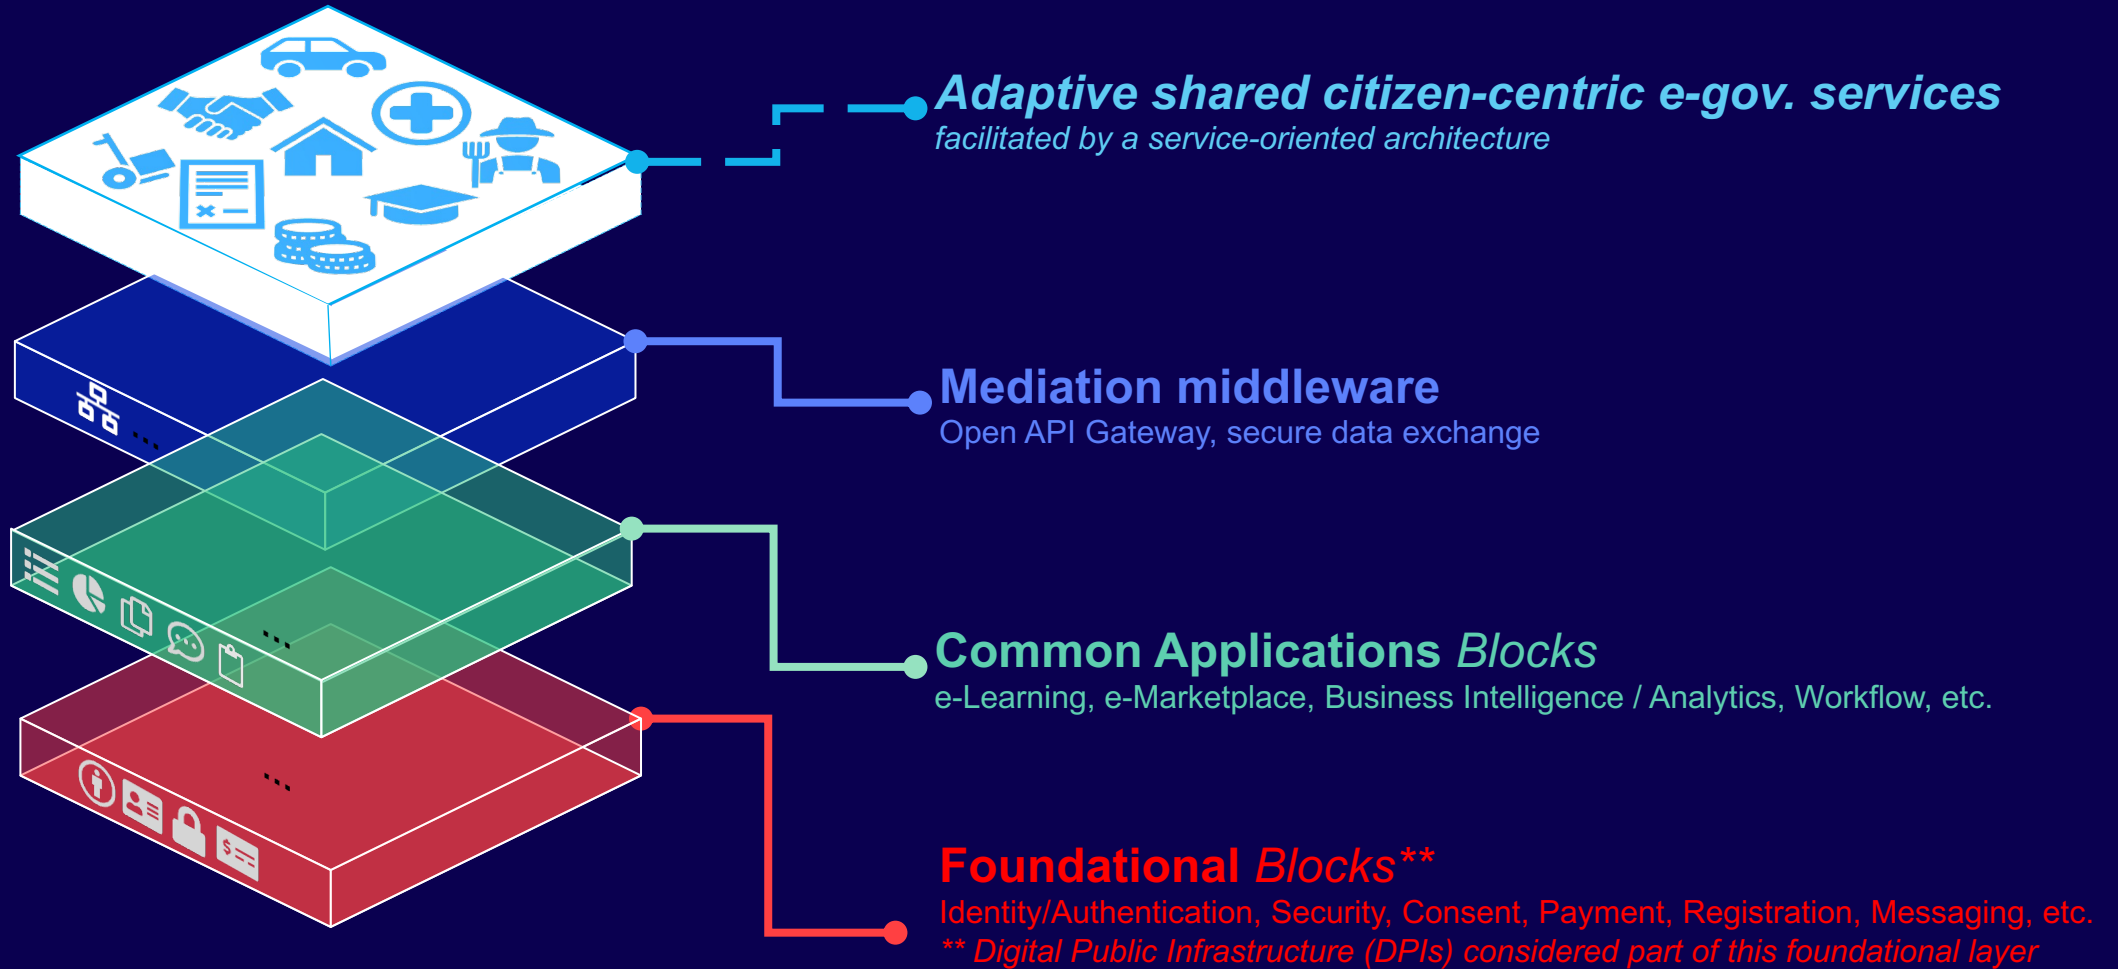

Huge challenges exist in **adapting and investing in projects at scale**, particularly around the rollout of physical ICT infrastructure, the deployment and use of common data platforms.

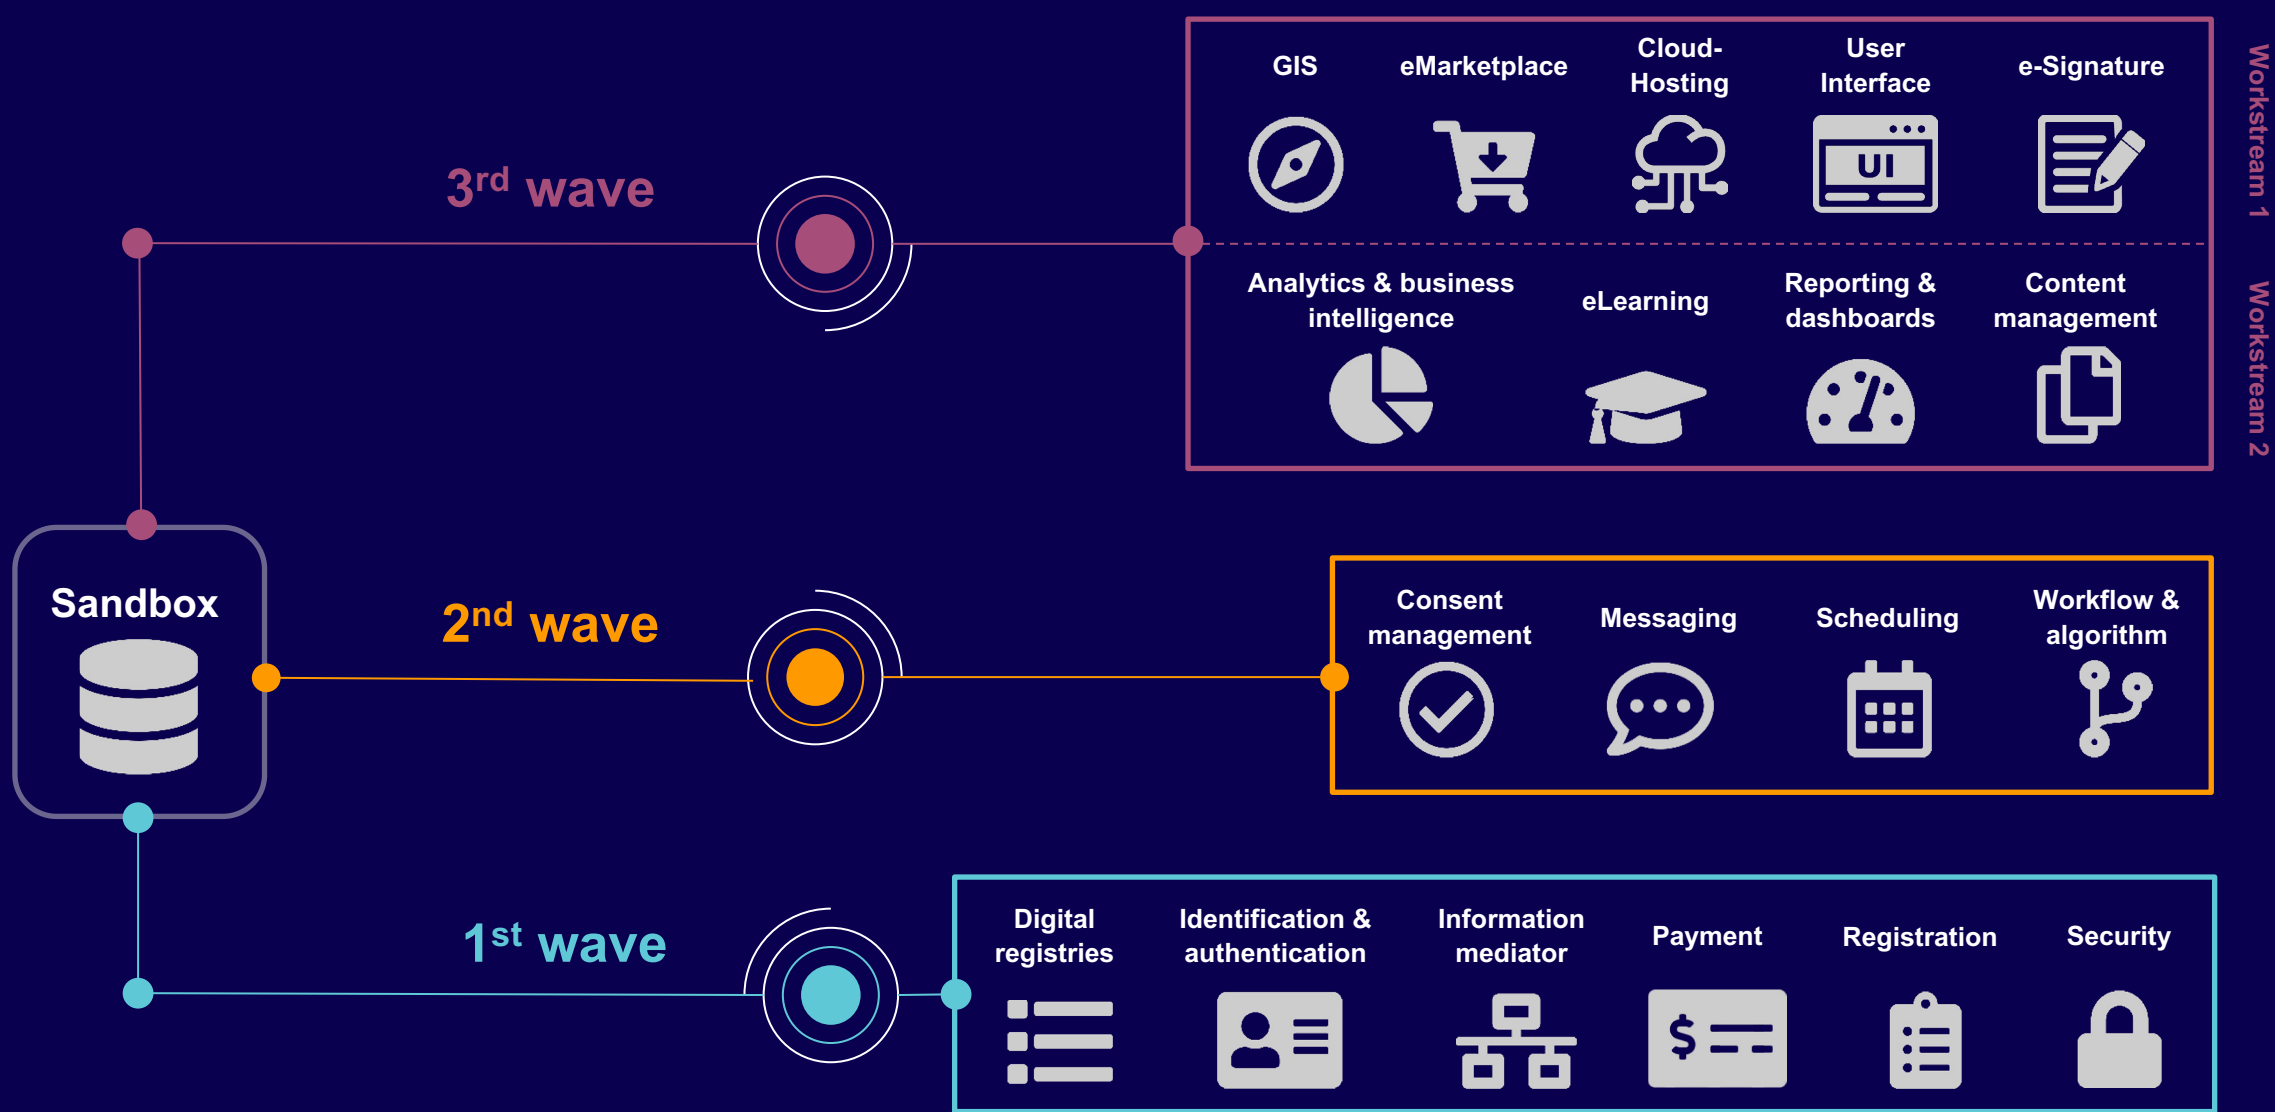

Coordination

Problems in coordination commonly occur in **aligning ICT ministry work with that of other agencies**.

The screenshot shows the GovStack website interface. At the top left is the GovStack logo and a 'Develop...' dropdown menu. The top right contains links for 'GovStack Home', 'Give Feedback', a search bar, and a keyboard shortcut icon (^K). A left sidebar lists navigation items: 'GovStack' (highlighted), 'Contributing', 'Code of Conduct', 'Architecture and Nonfunctional Requirements', 'Security Requirements', and a section for 'BUILDING BLOCKS' including 'About Building Blocks', 'Information Mediation', 'Registration', 'Digital Registries', 'Identity', 'Payments', 'Consent', 'Workflow', and 'Messaging'. At the bottom of the sidebar is a 'Powered By GitBook' badge. The main content area features the 'GovStack' title, a vertical ellipsis menu, and two paragraphs of introductory text. The first paragraph describes the initiative's goal of building reusable digital components. The second paragraph focuses on enabling digital transformation through the 'building blocks' approach. Below the text is a large graphic of a 3D box containing various blue icons representing different sectors: a car, a handshake, a house, a medical cross, a construction worker, a graduation cap, a document, and a stack of coins.

GovStack

The GovStack initiative aims to build a common understanding and technical practice on fundamental reusable and interoperable digital components, which we collectively refer to as Building Blocks. Our effort is expert-driven and community-based, and includes the participation of multiple stakeholders to bring together expertise for strengthening a government's cross-agency architecture view.

Our focus is to enable countries to kickstart their digital transformation journey by adopting, deploying, and scaling digital government services. Through the digital "building blocks" approach, governments can easily create or modify their digital platforms, services, and applications by also simplifying cost, time, and resource requirements.

Powered By **GitBook**

GovStack develops a stack of tools and practices for eGovernment services.

Building Blocks

- Develop functional specifications for foundational building blocks
- Match products against specifications
- Provide building block products on a marketplace

Sandbox Environment

- Develop a virtual testing ground for building blocks
- Create prototypes for eGovernment services
- Accelerate creation of eGovernment services

Country Implementations

- Support countries in using building blocks in their digital strategies
- Support prototyping of eGovernment services
- Strengthen local digital capacities

Communities of Practice

- Create a dynamic GovStack community
- Engage the open source ecosystem
- Enable exchange between policy makers on using building blocks

[Join the Community](#)

CIO Digital Leaders Forum

The CIO Digital Leaders Forum is a unique hub for government CIOs, CXOs, and others involved in government digital transformation to learn from each other's digital journeys. Technical leaders will present their country's digital strategy, the government's enterprise architecture, the road map and progress on the digitization of government services, as well as, lessons learned.

Join the Community

Become part of the GovStack Initiative!

Piloting of digital government use cases

Use case **prioritization evaluation**

Identification of the **ideal pilot** use case, such as digitization of birth certificates

Development of a **technical prototype**

Technical adaptation of government building blocks

Strengthening country local capacity

Workshops and e-learnings on GovStack topics such as:

- e-government building blocks
- Prototyping
- Whole-of-government approach
- Digital change management

Participation in Communities of Practice

Set up of regional HoA Communities of Practice

Participation of HoA stakeholders in existing GovStack Communities of Practice

Regular contribution of HoA expertise through sharing best practices

Developing digital government strategies and roadmaps

Evaluation of the strategic, technical, and regulatory prerequisites to introduce e-services

Develop implementation roadmaps for the introduction of national e-government services

Support both pilot and roll-out phases
