C&I Guidelines

Establishing Conformity and Interoperability Regimes – Basic Guidelines

Guidelines for the development, implementation and management of mutual recognition arrangements/agreements (MRAs) on conformity assessment

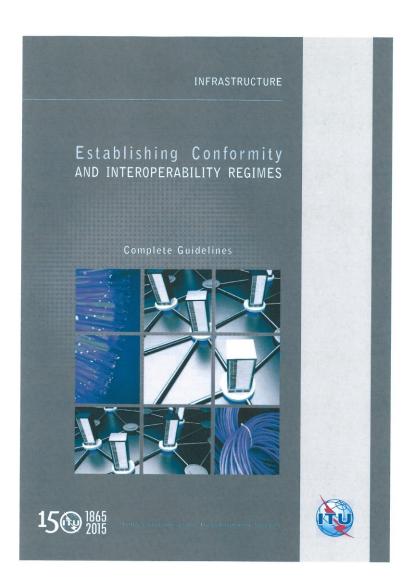

Guidelines for developing countries on Establishing Conformity assessment Test Labs in Different Regions

Feasibility Study for the establishment of a Conformity Testing Centre

New ITU C&I Guidelines

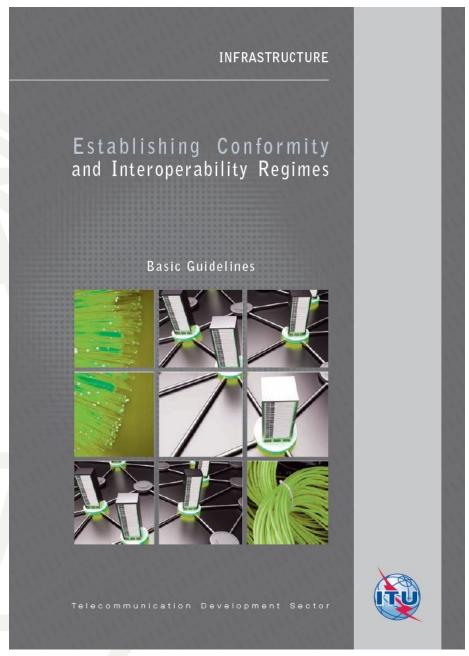

Establishing Conformity and Interoperability Regimes – Complete Guidelines (2015)

These Guidelines compiled from a careful collection of international best practices, address challenges faced by developing countries as they plan and review their own C&I regimes. Aspects covered by this publication include, inter alia, conformity assessment procedures; the right type of approval system, the legislation required to promote an orderly telecommunication service and marketplace; the calculation of fees, and the ideal enforcement and Surveillance; coordination across regulatory agencies; relevant international standards.

1. Establishing Conformity and Interoperability Regimes

Basic Guidelines

Content

- 1. Introduction
- 2. Definitions

- 3. Development and review of regulatory framework and roadmap for the establishment of C&I regimes
- 4. Definition and publication of ICT reference standards
- 5. Accreditation, recognition and acceptance of laboratories and qualified professional

Conformity – different perspectives

- 1. Service providers and operators specify standards and specifications for equipment and systems which they employ to provide services to their customers.
- National regulators mandate regulations, standards and specifications for equipment and systems which are deployed and used in their territories.
- Jesus of the equipment and systems along with the service providers and national regulators require evidence and proof that the equipment and systems conform to the appropriate standards and specifications and to the extent that they interoperate with each other as specified.
- The process used to obtain the evidence and proof is called conformity assessment – the demonstration that specified requirements relating to a product, process, system, person or body are fulfilled

Conformance of ICT equipment and systems to standards and homologation process

National Rules

- A
- B
- •C, ..

Regional Rules

- X
- Y
- Z,...

International Rules

- •Interoperab.
- EMC

ISO/IEC 17022 Audit reports

Definitions (1)

- Applicant is the manufacturer or representative interested in selling the product in the concerned market (country/region).
- Certification is the type approval process in which a Certification Body states, through the Certificate of Conformity, that a product fulfills the specified requirements.
- Certificate of Conformity is a statement of conformity issued by a Certification Body.
- Declaration of Conformity is a statement of conformity issued by a 1st party (vendor) or a 2nd party (buyer, e.g. telecom operator).

Definitions (2)

- Conformity Assessment demonstration that specified requirements related to a product, process, system, person or bode are fulfilled.
- Homologation official act issued by the Regulatory Authority that empowers the applicant to sell the ICT product in the concerned market.
- □ First party supplier of a product (vendor).
- Second party the purchaser of a product (telecom operator).
- □ Third party a person or body that is independent of the organization that provides the product, and of the user interested in the product.

Definitions (3)

Supplier Declaration of Conformity (SDoC)

- Supplier Declaration of Conformity (SDoC) is the conformity assessment scheme used for low risk and mature products.
- Upon meeting a set of conditions, a supplier can self-declare that the equipment conforms to the appropriate requirements.
- There are four different schemes of SDoC (next slide)

Definitions (4)Supplier Declaration of Conformity (SDoC)

SDoC I

- testing of the equipment to be performed by an ISO/IEC 17025 compliant testing laboratory that is recognized by the regulator;
- test reports have to be kept for a prescribed period;
- supplier has to register the declaration with the regulator

SDoC II

- testing of the equipment to be performed by an ISO/IEC 17025 compliant testing laboratory that is recognized by the regulator;
- test reports have to be kept for a prescribed period;
- supplier does not have to register the declaration with the regulator

SDoC III

- testing of the equipment to be performed by a testing laboratory;
- test reports have to be kept for a prescribed period;
- supplier has to register the declaration with the regulator.

SDoC IV

- testing of the equipment to be performed by a testing laboratory;
- test reports have to be kept for a prescribed period.

Regulatory framework and roadmap for the establishment of conformity and interoperability regimes

- □ A telecommunication act reflects the policy of the sovereign state in question and can include a clear statement of the underlying policy. This statement would cover such elements as:
 - reliable and affordable telecommunication services of high quality;
 - highlighted role of telecommunications to enhance efficiency and competitiveness;
 - efficient and effective regulation where required;
 - responsiveness to the economic and social requirements of users of telecommunication services;
 - international telecommunication services and licenses;
- □ Telecommunication apparatus and administration:
 - application to apparatus subject to regulation;
 - government powers and exercise of powers;
 - certification and marking;
 - appeals and evidence;
 - regulations including fees and mandatory requirements.
- Investigation and enforcement:
 - administrative and monetary penalties;
 - inspection and market surveillance;
 - civil liability

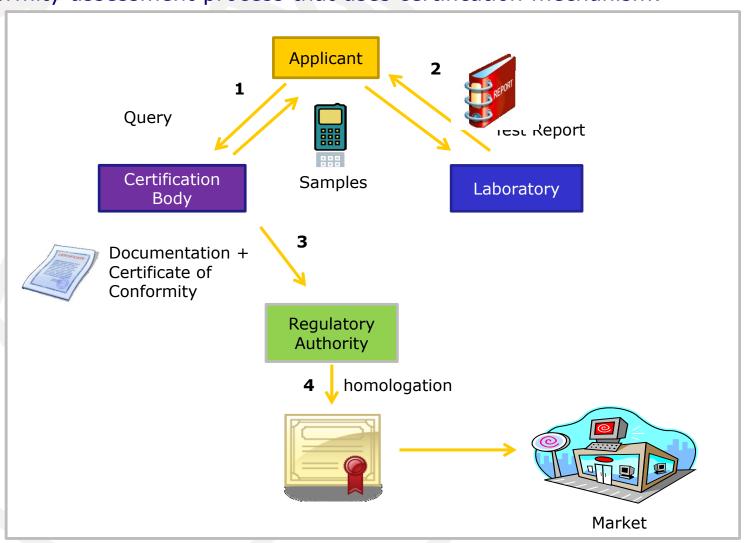

Conformance Assessment Procedures

Procedures for establishing a conformance assessment regime may include the following procedures:

- A. Query for new products to be homologated
- B. Issuing and/or validating a Certificate of Conformity
- C. Issue of the Homologation (or acceptance)
- D. Import procedures for testing proposals
- E. Reference Standards for conformity assessment
- F. Recognized Laboratories and Test Reports
- G. Marking
- H. Monitoring, Enforcement, and Sanctions and Post-Market Surveillance

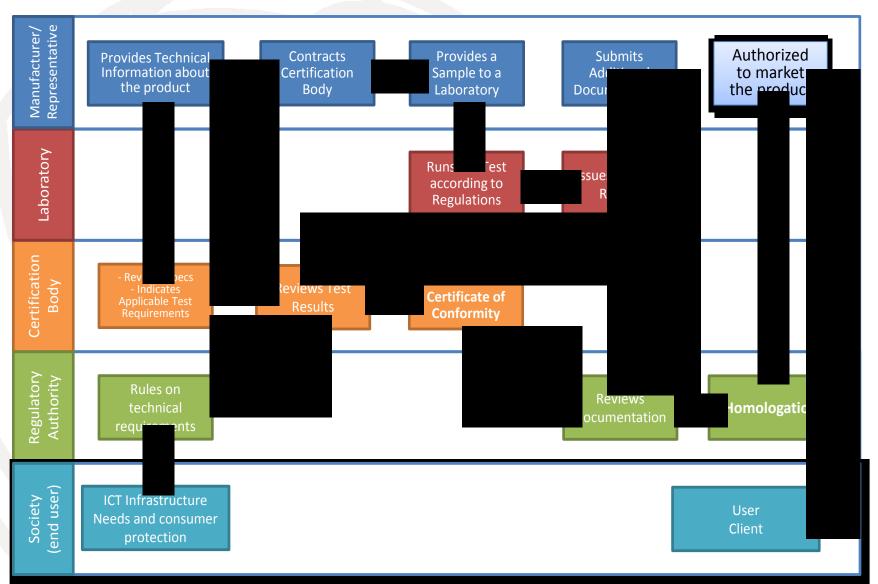

Regulatory Aspects – Conformance assessment procedures

Example of interactions that may exist among the entities participating in a conformity assessment process that uses certification mechanism:

Procedures for Establishing Conformity Assessment Regimes (cont.)

Another example of interactions that may exist among the entities participating in the conformity assessment process

Conformance Assessment Procedures

Fees

- Assessment and reassessment fee
- Technical expertise fee
- Listing fees
- Registration fees
- Payment of fees

- Sub-category of equipment has specific mandatory technical specifications as part of the regulatory requirements which must be met in order to be deployed in the marketplace
- These standards are developed primarily in accordance with decisions made and ratified in the International Telecommunication Union (ITU), International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) combined with regional, national and industry standards requirements and are therefore a complex and very complete set of requirements which are vitally important to an interference free and safe environment for ICT products:

A number of regional standards bodies serving specific regional policies, regulations and requirements are heavily engaged in development and promulgation of the product standards and include the European Telecommunications Standards Institute, USA Telecommunications Industry Association, and various important forums and consortia such as 3GPP

- The process to arrive at many of these equipment standards and specifications, especially in the radiocommunication equipment side stems primarily from basic work of the ITU membership at the World Radiocommunication Conferences (WRCs) where decisions are made regarding what services are to be defined in specific frequency bands.
- This in turn guides national and regional decisions on determining their frequency band plans for various services including broadcast and other radiocommunication services and usage. Following this, frequency band plan guides are developed for national and regional frequency allocations, known as standard radio system plans

The next table gives and example examples of international standards, regional standards and forum and consortia standards used by some countries...

Category	Product	Standard	Technical Requirement
User equipment	Mobile	3GPP	Power; frequency stability, frequency in-band emission.
	Fiix Telephone	CEI	Power; frequency stability, frequency in-band emission.
	PABX	Rec. UIT-T G.711.Rec. UIT-T Q.921.	Protocols
	Charge and power adapter	Rec. UIT-T L.1000	Power, energy efficiency, eco-environment specifications
	Personal area communication	Allocation of national frequencies	Gain, transmission power, bandwidth, frequency stability.
	Residential optical unit	UIT-T G.984	Power; frequency stability, frequency in-band emission, SAR limits.
	UTP cable	ISO/CEI 11801	Return Loss, FEXT, NEXT, bandwidth
RTTE	Mobile - Broadband base station	ETSI	Gain, transmission power, bandwidth.
	AnteNna	ETSI	Radiation Diagram, Gain, VSWR.
	Broadcast transmitter	ETSI	Gain, transmission power, frequency width.
	Earth station equipment / VSAT	ETSI	Gain, transmission power, bandwidth
Network equipment	Transmission equipment	Rec. UIT-T G.707	Protocols
	Network switches and routers.	MPLS - G.8121 Ethernet - G.8021 TVIP - H.62X	Protocols
	Cables	ISO/CEI 11801	Return Loss, FEXT, NEXT, bandwidth
	IPVT	Rec. UIT-T	See Standard
Electromagnetic Compatibility	All equipment	Rec. UIT-T K.48	Radiated spurious emission, conducted spurious emission, resistibility
Safety	All equipment	Rec. UIT-T K.21	Electrical chock protection, fire protection, overcurrent protection

Another example of how these kinds of standards are structured in a particular Member State (in this case Canada)

Broadcasting equipment standards

- Broadcasting Equipment Technical Standards (BETS)
- Broadcasting Specifications and Standards (BTS & BS)
- Broadcasting Certificate Exempt Radio Apparatus List

Radio equipment standards

- Radio Standards Specifications (RSS)
- Category I Equipment Standards List (user's terminals)
- Category II Equipment Standards List (operator's terminals)
- License-exempt Radio Apparatus Standards List
- Regulatory Standards Notice

Electromagnetic compatibility standards

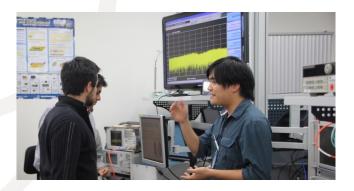

The following series of standards are largely adopted or adapted from the CISPR (International Special Committee on Radio Interferences) and ITU standards, covering testing procedures such as radiated emissions, conducted emissions, immunity and resistibility.

Terminal equipment: Technical specifications/standards list

In some countries the standard provides technical requirements for:

- connection of terminal equipment to public networks
- hearing aid compatibility with handsets.
- compliance specifications for terminal equipment, terminal systems and network protection devices

Specific absorption rate (SAR)

Specialized measurement systems have been developed to permit determination of the SAR value of a given product or system in order to assess compliance with the definitions of limits set by different SDOs (e.g. IRCNIRP)

Consideration of WTO rules on TBT

The World Trade Organization (WTO) is the international organization whose primary purpose is to open trade for the benefit of all

The WTO Agreement on Technical Barriers to Trade (TBT) tries to ensure that regulations, standards, testing and certification procedures do not create unnecessary obstacles, while also providing members with the right to implement measures to achieve legitimate policy objectives, such as the protection of human health and safety, or the environment

The principles of the TBT agreement are as follows:

- (1) Avoidance of unnecessary obstacles to trade;
- (2) Non-discrimination and national treatment;
- (3) Harmonization;
- (4) Equivalence of technical regulations;
- (5) Mutual recognition of conformity assessment procedures; and
- (6) Transparency.

List of ICT equipment requiring conformity assessment

Examples:

Types of Equipments

Radio apparatus: A device or combination of devices intended for, or capable of being used for,

radiocommunication

Interference-causing

equipment: Any device, machinery or equipment, other than radio apparatus, that can cause interference to radiocommunication

Radio-sensitive equipment:

Any device, machinery or equipment, other than radio apparatus, that can be adversely affected by radiocommunication emissions

Equipment that must meet technical standards

Broadcasting transmitters

Portable radio transmitters

Digital scanner receivers

Remote car alarms and starters

Garage door openers

Wireless computer links

Cellular phones

Cordless phones

Fax machines

GSM telephones

Mobile radios

Modems

Wireless remote devices

PABXs (including small business systems and

key systems)

Pagers

Radio receivers

Radio transmitters

Telephone instruments

Telex equipment

Other equipment emitting a radio signal

Any customer premises equipment to be attached to any part of a licensed

telecommunication network

Establishing Conformity and Interoperability Regimes

Complete Guidelines

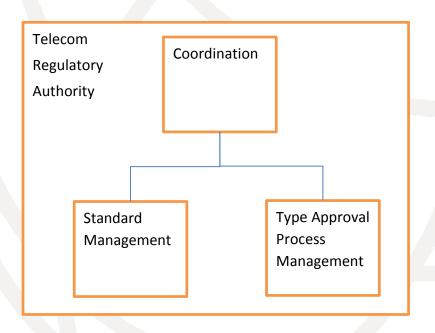

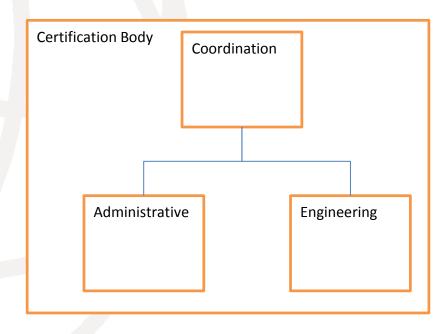

Revision of a Conformance Assessment Regime (Case study)

- Review of a Conformance Assessment Regimes.
 Some necessities of improvement:
 - Self-Declaration of Conformity acceptance;
 - Accountability of vendor's local representatives (manufacturer`s representative);
 - Adapting existing equipment to new conformity assessment rules, standards, and procedures;
 - Revision of the Application Form to ensure, among other, product origin verification;
 - Renewal of certificates (procedures and fees);
 - Review of the fee structure.

2. Guidelines for the development, implementation and management of mutual recognition arrangements/agreements (MRAs) on conformity assessment

2. Guidelines for MRAs

- These guidelines aim at promoting the understanding and establishment of MRA, known as efficient tools to promote regional integration
- Through the share and efficient use of Conformance and Interoperability (C&I) infrastructures – as laboratories, accreditation bodies and regulatory practices – technical requirements can be harmonized and the transit of ICT goods and services can be facilitated, increasing trade and regional development

Guidelines for MRAs (cont.)

Topics:

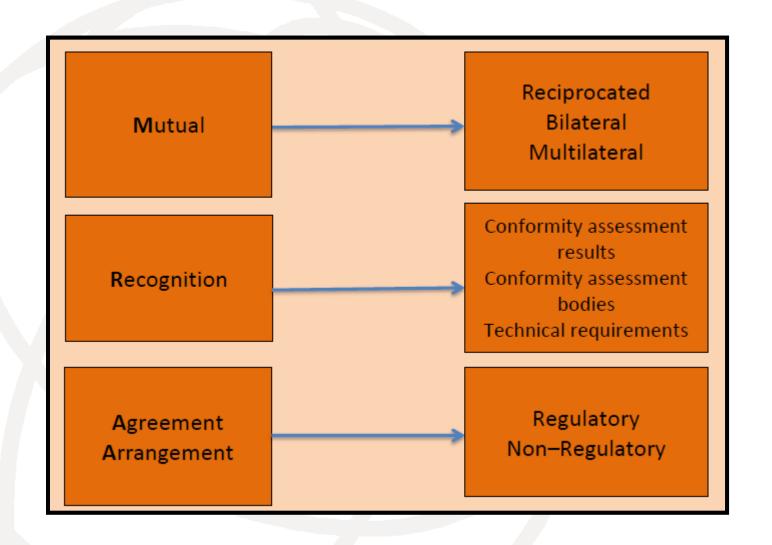

- Benefits
- Types of MRA
- Attributes
- Development
- Implementation
- Management
- Consultation and Training
- Stakeholders
- Procedures for contesting the competence of conformity assessment bodies
- A typical MRA operation
- Recommendation

Guidelines for MRAs (cont.)

Agreement x Arrangement

- A **Mutual Recognition Agreement** is a formal legal commitment between parties for recognition of conformity assessment results for telecommunication equipment. It deals with regulatory requirements and it is referred to in the text as "regulatory MRA". Often such agreements are made bilaterally, regionally or multilaterally between two or more governments.
- A **Mutual Recognition Arrangement** is a voluntary arrangement between parties for recognition of conformity assessment results for telecommunication equipment. It deals with nonregulatory requirements and it is referred to in the text as "non-regulatory MRA". An example of a mutual recognition arrangement is amongst accreditation bodies to mutually recognize the conformity assessment results from accredited conformity assessment bodies.

Guidelines for MRAs (cont.)

MRA Benefits

For manufacturers:

- an opportunity to test and certify products one time to the requirements of multiple markets and ship products without further conformity assessment;
- increase certification efficiency for products exported to foreign markets, thus increasing export opportunities for small and medium-sized enterprises (SMEs); and
- decreasing time-to-market for companies manufacturing telecommunication equipment with shorter and shorter product life cycles, thus maximizing export opportunities and allowing for rapid reinvestment in research and development for next-generation technologies.

For conformity assessment bodies:

• Allowing conformity assessment bodies (CABs) to increase the value of their service by offering their clients a substantially wider portfolio, including testing and certifying products for multiple markets.

MRA Benefits (Cont.)

For regulators:

- reduction of regulatory resources required to certify terminal attachment and radio equipment;
- an opportunity to reallocate a portion of these former certification costs to other areas;
- a potential stepping stone towards further harmonizing of technical requirements and of regional and national conformity assessment systems; and
- access to a pool of knowledge about the latest global trends and experiences regarding conformity assessment and regulatory systems.

For consumers:

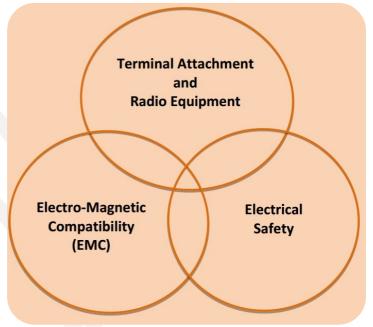

- increasing consumer access to the widest variety of available technology;
- faster access to equipment at a lower cost; and
- speeding the development of telecommunication and Internet infrastructure.

Attributes of an MRA

- 2.1 Designation
- 2.2 Accreditation
- 2.3 Recognition
- 2.4 Retaining designation or recognition
- 2.5 Suspension or withdrawal of designation or recognition
- 2.6 Dispute resolution

3. Development of an MRA

- 3.1 Framework for MRAs
- 3.2 Coverage and Scope
- 3.3 Identification of parties to the MRA
- 3.4 Obligations under an MRA
- 3.5 Duration and disestablishment of a MRA
- 3.6 Examples of some MRAs on conformity assessment

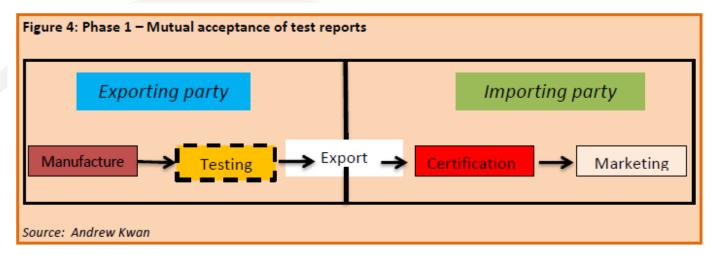

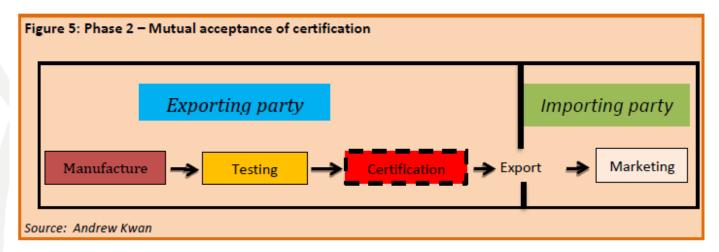

4 Implementation of an MRA

- 4.1 Conformity Assessment
- 4.2 Pre-implementation preparation
- 4.3 Confidence building and start-up
- 4.4 Identification of scope technical requirements and phases
- 4.5 Identification of contacts
- 4.6 Information exchange
- 4.7 Nomination of designating authorities
- 4.8Identification of MRA host and repository of signatories
- 4.9 Nomination of regulatory authorities
- 4.10 Identification of accreditation bodies
- 4.11 Notification of conformity assessment bodies
- 4.12 Recognition of conformity assessment bodies
- 4.13 Formation of a joint committee
- 4.14 Monitor and surveillance programmes
- 4.15 Experience from implementation of existing MRAs

4 Implementation of an MRA

4.4 Identification of scope – technical requirements and phases

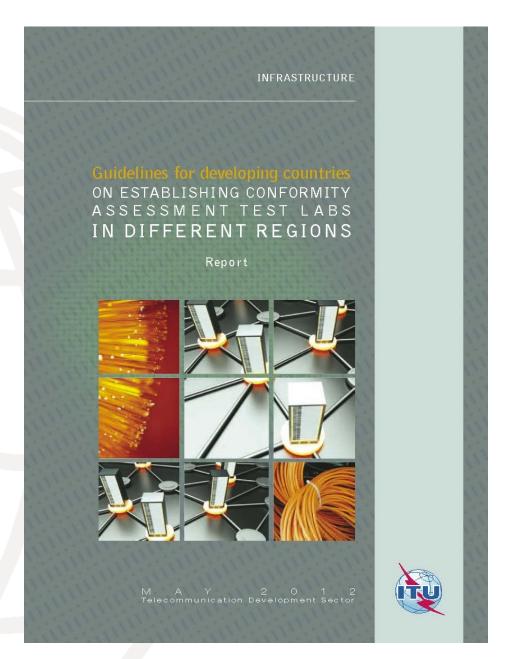

Parties can choose to implement the phases of the MRA one at a time or both together. Typically the parties will implement Phase 1 and after gaining experience and confidence with the Phase 1 procedure, they will then proceed to implement the Phase 2 procedure.

5 Management of an MRA

- 5.1 Joint committee
- 5.2 Update and surveillance of accreditation bodies and conformance assessment bodies (CABs)
- 5.3 Management of data
- 5.4 Record of notifications and changes
- 5.5 Termination and withdrawal from an MRA

3. Guidelines for developing countries on Establishing Conformity assessment Test Labs in Different Regions

Guidelines for Developing Countries for Establishing Test Labs in Different Regions

http://www.itu.int/ITU-D/tech/ConformanceInteroperability/ConformanceInterop/indexGuidelines.html

- Status in the regions and needs
- Funding and Training Sources
- Criteria to establish Accreditation and Conformity Assessment Bodies -International Telecommunications Testing Centres (ITTCs)
- Economics and Cost Implications for ITTCs
- Roadmap for ITTC rollout

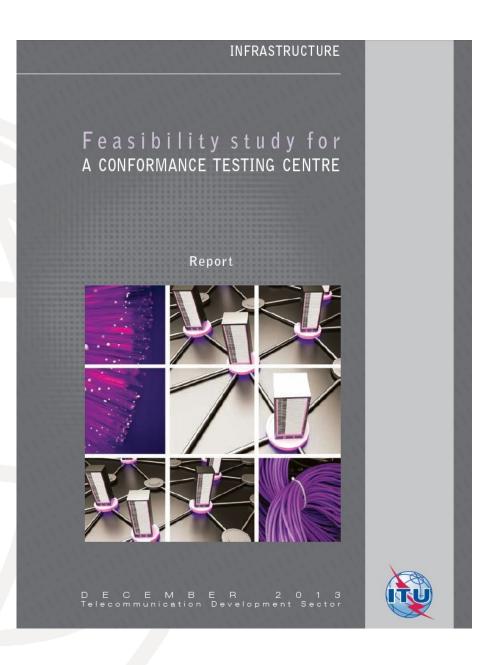

Steps to Establish an ISO 17025 Compliant Test Lab

- > Management requirements and systems
- >Lab requirements, test methods and procedures, audits, equipment handling, technical competence
- >Document control, calibration records and staff records
- > Handling of test reports and calibration certificates
- >Service to customers and handling of complaints

Funding and Training Sources

- >UNIDO, major Banks in each region, specialized funding agencies for telecoms projects and others
- >Requirements to access funds vary from low interest loans, to grants, seed funding and cost underwriting
- Repository of international telecom training organizations
- >Costs of training may vary from just travel to and from location, to government and supplier subsidized training, to private for-profit fully costed training.

4. Feasibility Study for the establishment of a Conformity Testing Centre

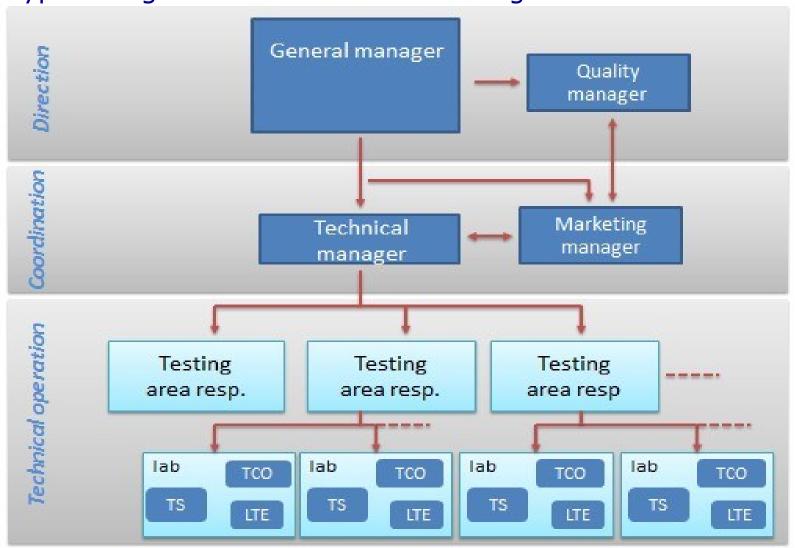

Feasibility Study for the establishment of a Conformity Testing Centre

The feasibility study will addresses:

- Implementation;
- II. Functional Model of Type Approval Institution;
- III. Sustainability of operations;
- IV. Pricing policies;
- v. Proposal of the Organization Scheme;
- VI. Technical requirements for Type Approval Laboratories;
- VII. Staff requirements;
- VIII. Project Implementation Recommendations; and
- IX. Investment costs estimation (summary).

Feasibility Study for the establishment of a Conformity Testing Centre

Typical Organization Chart of a Testing Lab:

Feasibility Study for the establishment of a Conformity Testing Centre (cont.)

Testing laboratory infrastructures:

Area of competence

Specific Absorption Rate lab

User experience lab

Broadband access lab

Mobile value added services lab

Electrical safety & protection lab

Electroacoustic lab

Electromagnetic compatibility lab

Radio & Signalling lab

Powering efficiency lab

Quality of material lab

Personal area network lab

Fixed Test plant

Mobile Test plant

Feasibility Study for building a Conformance Testing Centre (cont.)

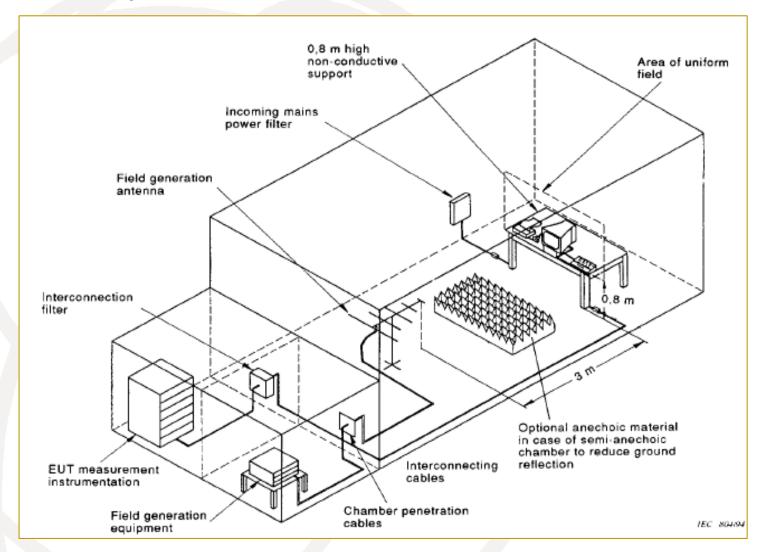

Overview 1

Broadband access laboratory (BBA):

- The scope of the broadband access laboratory is to evaluate all different equipment and functionalities used in next generation access networks, ranging from the physical layer to networking aspects
- In particular xDSL transmission performances and optical parameters are tested for copper and fiber solution in relation to the different architectural choices (FTTx)

Overview 2

EMC: Typical set-up for table top equipment for radiated immunity tests

Laboratory	Activity	m²	Location Rent 1 000 EUR/yea r	Utility 1 000 EUR /year	Instrument Asset 1 000 EUR	Number of staff	Instrument Opex 1 000 EUR /year
