29TH WORLD RADIOCOMMUNICATION SEMINAR
30 November - 11 December 2020

Overview of terrestrial services

ITU Radiocommunication Bureau

#ITUWRS

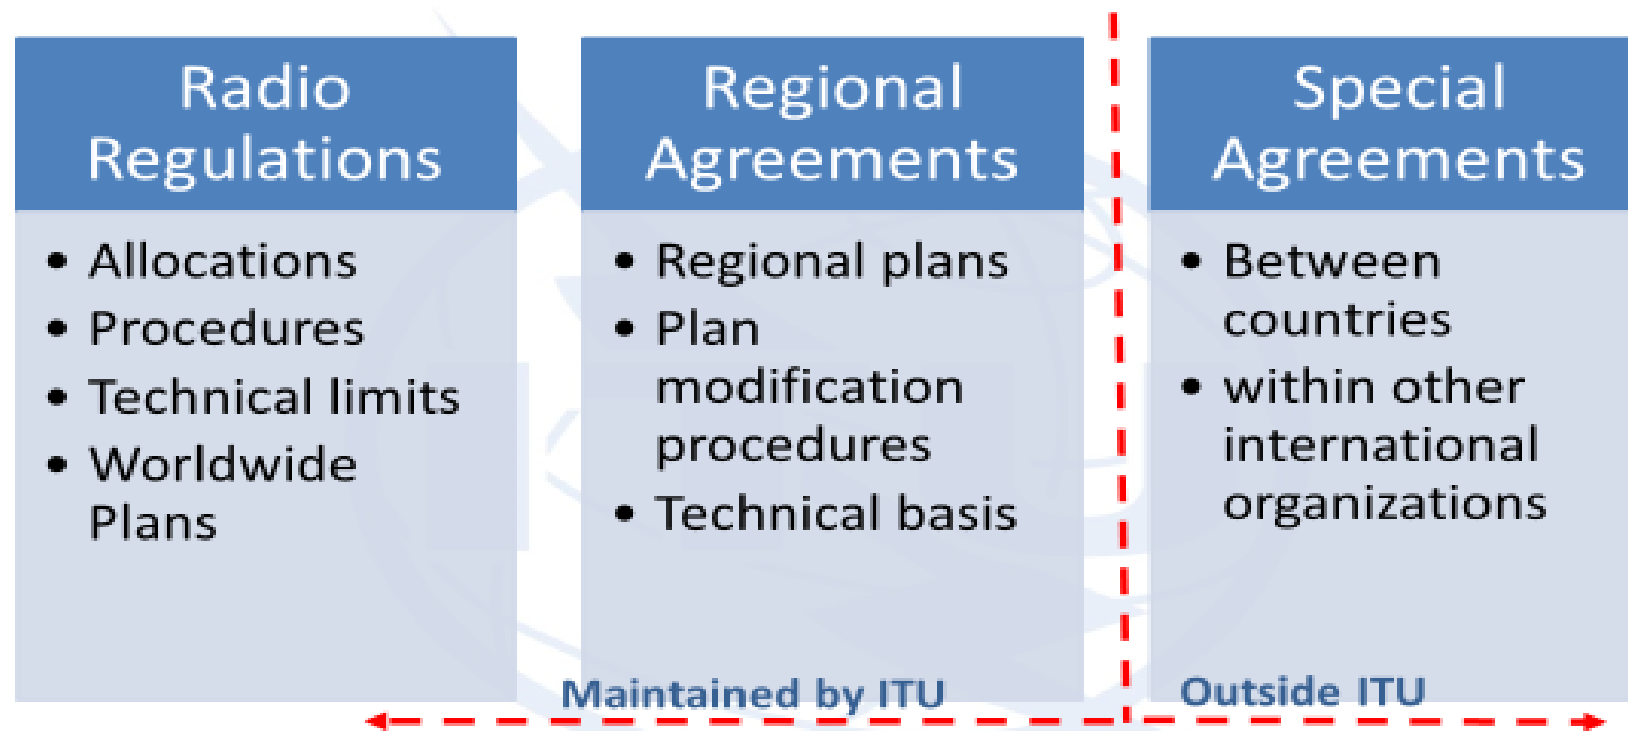

Terrestrial radiocommunication Services

Terrestrial services: the stations at ground, sea, in the air, up to ≈ 50 km

Radio Regulations determine the rules mainly for services, not applications, except some specific applications, e.g. IMT, HAPS, RLANs

Main regulatory instruments

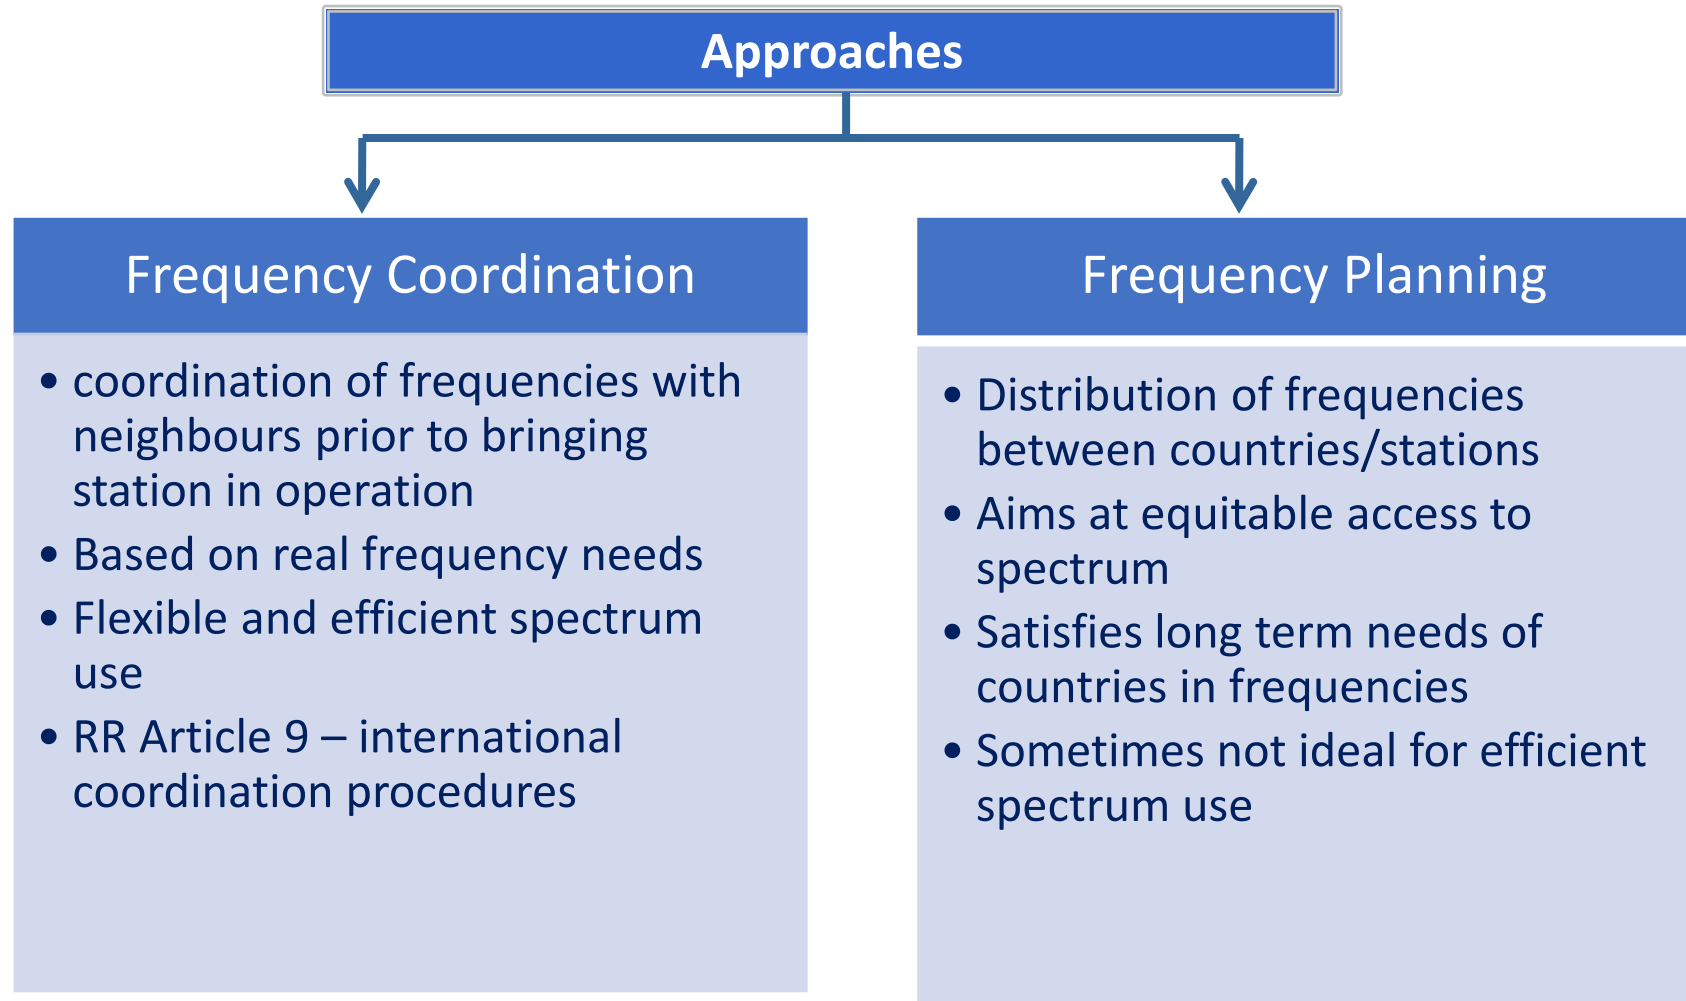

- Other ITU instruments:
 - Rules of Procedure that explain some difficult RR provisions
 - ITU-R Recommendations: technical standards containing system characteristics, channeling arrangements, mitigation techniques, etc.

Radio Regulations

- Main instrument of international regulations. Based on 2 main concepts:
 - (1) Blocks of frequency allocations to compatible services (Art. 1, 5)
 - (2) Regulatory procedures: Coordination (Art.9, AP5, 7), Notification to the MIFR (Art.11, AP4), Resolving Interference (Art. 15), Distress Communications (Art.33)...
 - Some bands are subject to worldwide frequency plans (in Aps 25, 26,27,..),
 - RR also contain technical limitations on stations, channeling arrangements
 - RR objectives:
 - Interference-free operation of stations
 - Stable planning environment for administrations and industry
 - Harmonization of spectrum usage

Approaches to sharing spectrum

Frequency plans for terrestrial services

- Existing frequency plans for terrestrial services:
 - **Worldwide** HF allotment plans for maritime mobile and aeronautical mobile services in RR Appendixes 25, 26, 27
 - **Regional/sub-regional** (concluded under the auspices of ITU)
 - VHF/UHF sound and TV broadcasting : GE84, ST61, GE89, GE06
 - LF/MF sound broadcasting: GE75, RJ81, RJ88
 - LF/MF maritime and aeronautical: GE85M, GE85N
 - Seasonal planning HFBC: ART 12 of the RR
 - Plans concluded in other organizations ITU: ICAO, IALA

Master International Frequency Register (MIRF)

- MIRF: worldwide database on the actual usage of frequencies by stations
- Covers all services, except amateur and HF broadcasting, records in 9.8 kHz - 224 GHz
- About 3 000 000 terrestrial assignments. Nearly 80 000 processed every year
- MIRF is published every 2 weeks in the BRIFIC on DVD and online (ISO image + e-MIFR)
- Practical value of registration in the MIRF:
 - The right of international recognition (other countries have to take records into account)
 - Identification of sources of interference
 - Basis for coordination activities
 - Reference data for sharing studies for WRCs preparations
- Notification is **mandatory** in some cases and **essential** in others (e.g. in border areas, in the bands shared with space)

Importance of notification to the MIFR, examples

- **International recognition**: e.g. interference from recorded station to non-recorded station
- **Assigning frequencies**: e.g. MIFR assists in finding available frequencies in HF band
- **Coordination** : when applying No. 9.21 coordination, in case of objections BR checks MIFR. Objections should be based only on station in use (recorded)
- **Useful data for decisions at WRCs, RRCs**
 - **RRC-04**: only recorded non-broadcasting assignments were eligible for protection
 - **WRC-03**: account for recorded FX, MS for allocation to HF broadcasting
 - **WRC-12**: account for recorded aeronautical beacons for allocation to amateur service
 - **WRC-19**: account for recorded TV stations for allocation to amateur service

Other terrestrial activities

- Publishing List of Coast Stations (List IV), List of Ship Stations (List V) and maintenance of the related [Maritime Access and Retrieval Database](#) (MARS) – RR Article **20**
- Allocation of Means of Identification for stations (call sign series, Maritime Identification Digits, etc.) published in [Global Administrative Database](#) (GLAD) – RR Article **19**
- Organization of [radiomonitoring programmes](#) in HF band and in 406-406.1 MHz; publishing summaries of monitoring results. Publication of the List of International Monitoring Stations (List VIII) – RR Article 16
- Maintenance of the [database of emergency and disaster relief communications](#) (Resolution 647(Rev.WRC-15))
- Maintenance of the [database of oceanographic radars](#) (Resolution 612(Rev.WRC-12))

Assistance to administrations

- **Assistance** to administrations:
 - In the procedures of the RR and Regional Agreements, training in the related software, e.g. RR9.21 procedure for PSE, POL, CTR...
 - In resolving cases of harmful interference and infringements
 - In transition to digital TV and allocation of Digital Dividend, e.g. in Africa, Arab, Caribbean regions
 - In multilateral coordination meeting, e.g. on spillover
 - Providing best practices of spectrum usage

Databases, software and online tools

Frequency assignment/allotment databases
(parameters to assess compatibility, international rights)

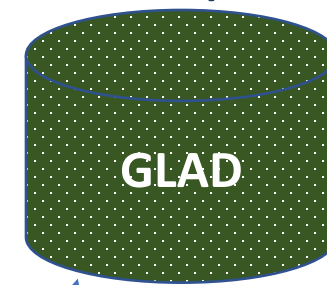

- worldwide
- all services
- all bands

- worldwide/regional
- specific services
- planned bands

Administrative databases
(administrative/operational data, reference information)

Thank you!
