

Identity Management within convergence networks and IoT

ITU Regional Forum on “Internet of Things,
Telecommunication Networks and Big Data as
basic infrastructure for Digital Economy”

**Saint-Petersburg,
4-6 June 2018**

Next Generation == Convergence paradigm

Y.2060 (06/2012)

Overview of the Internet of things

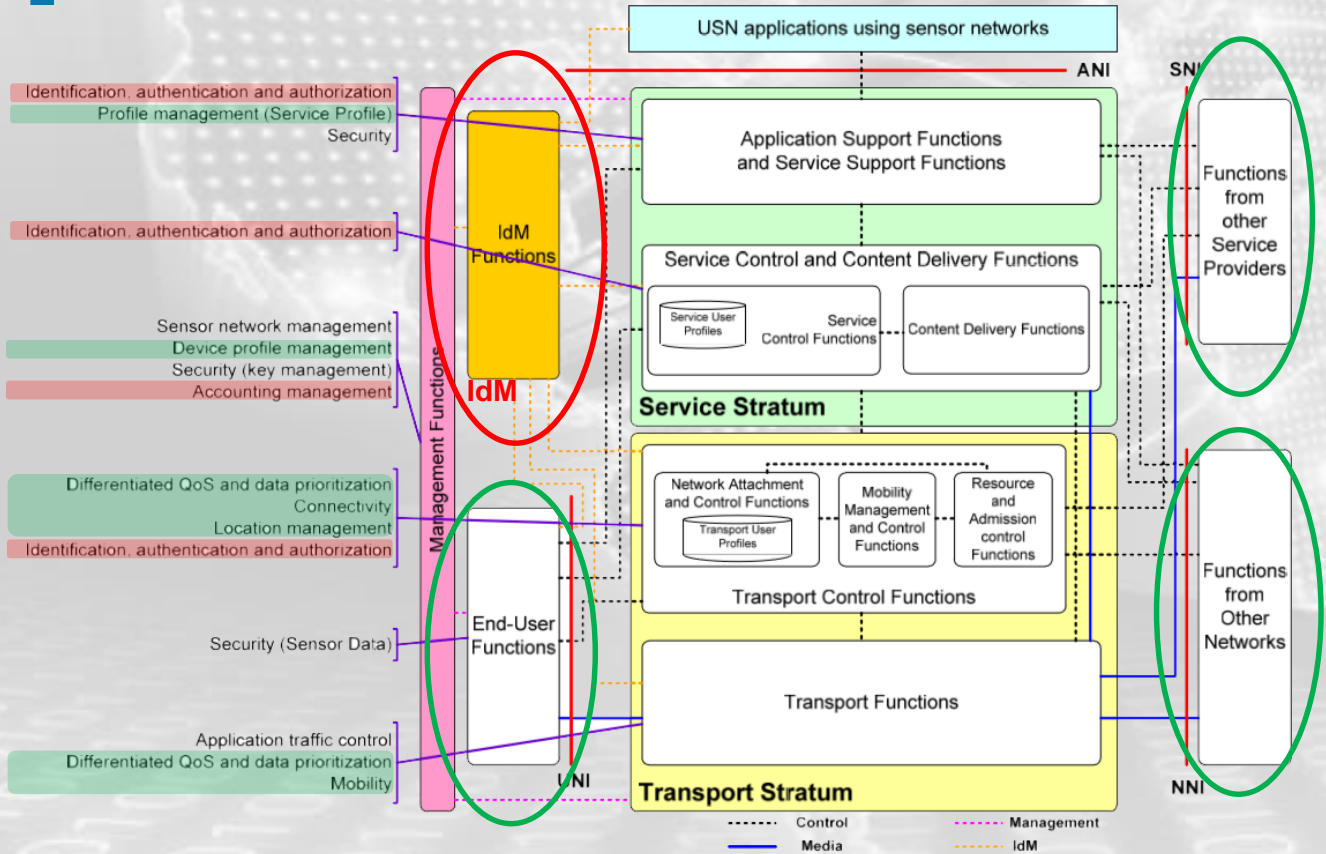

5 aspects of convergence:

- 1) Access
- 2) Interaction &
Interconnection
- 3) NNA
- 4) Services
- 5) Rates and Tariffs

Forming the basis of a convergent environment in which (1) **any user** at (2) **any time** and in (3) **any place**, using (4) **any own identifier (s)** and (5) **own device (s)**, can receive from (6) **any chosen operator** the necessary (7) **service "here and now"**

Overall functional architecture model

Y.2026
Functional requirements and architecture of the next generation network for support of ubiquitous sensor network applications and services

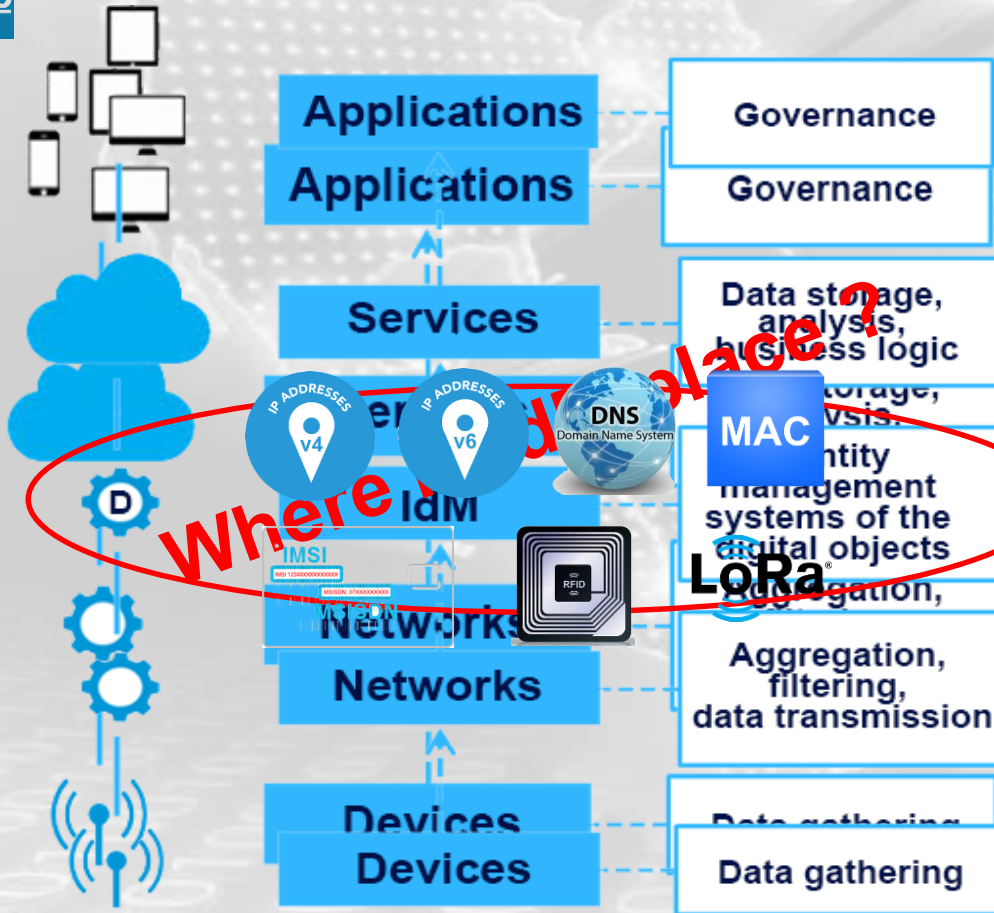

ANI	Application Network Interface
USN	Ubiquitous Sensor Network
UNI	User network interface
SNI	Service node interface
NNI	Network-to-network interface
IdM	ID Management

Relevant and necessary convergence features to support of the USN applications and services

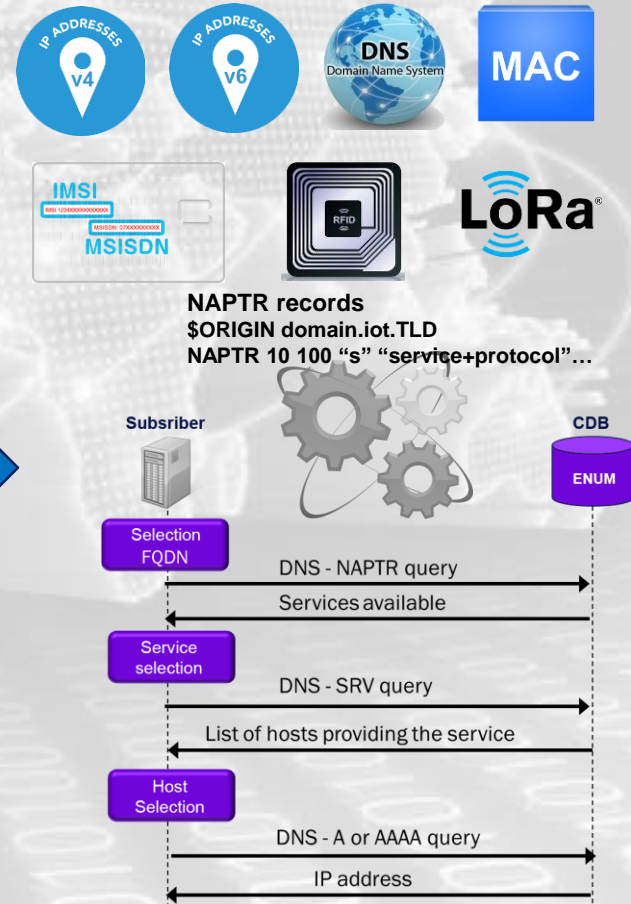

- Open service environment
- Differentiated QoS and data prioritization
- Connectivity
- Location management
- Scalability
- Portability
- Security
- Personalization
- Identification
- Authentication, Authorization, Accounting and charging

**Main drivers aimed at goals
in IoT networks**

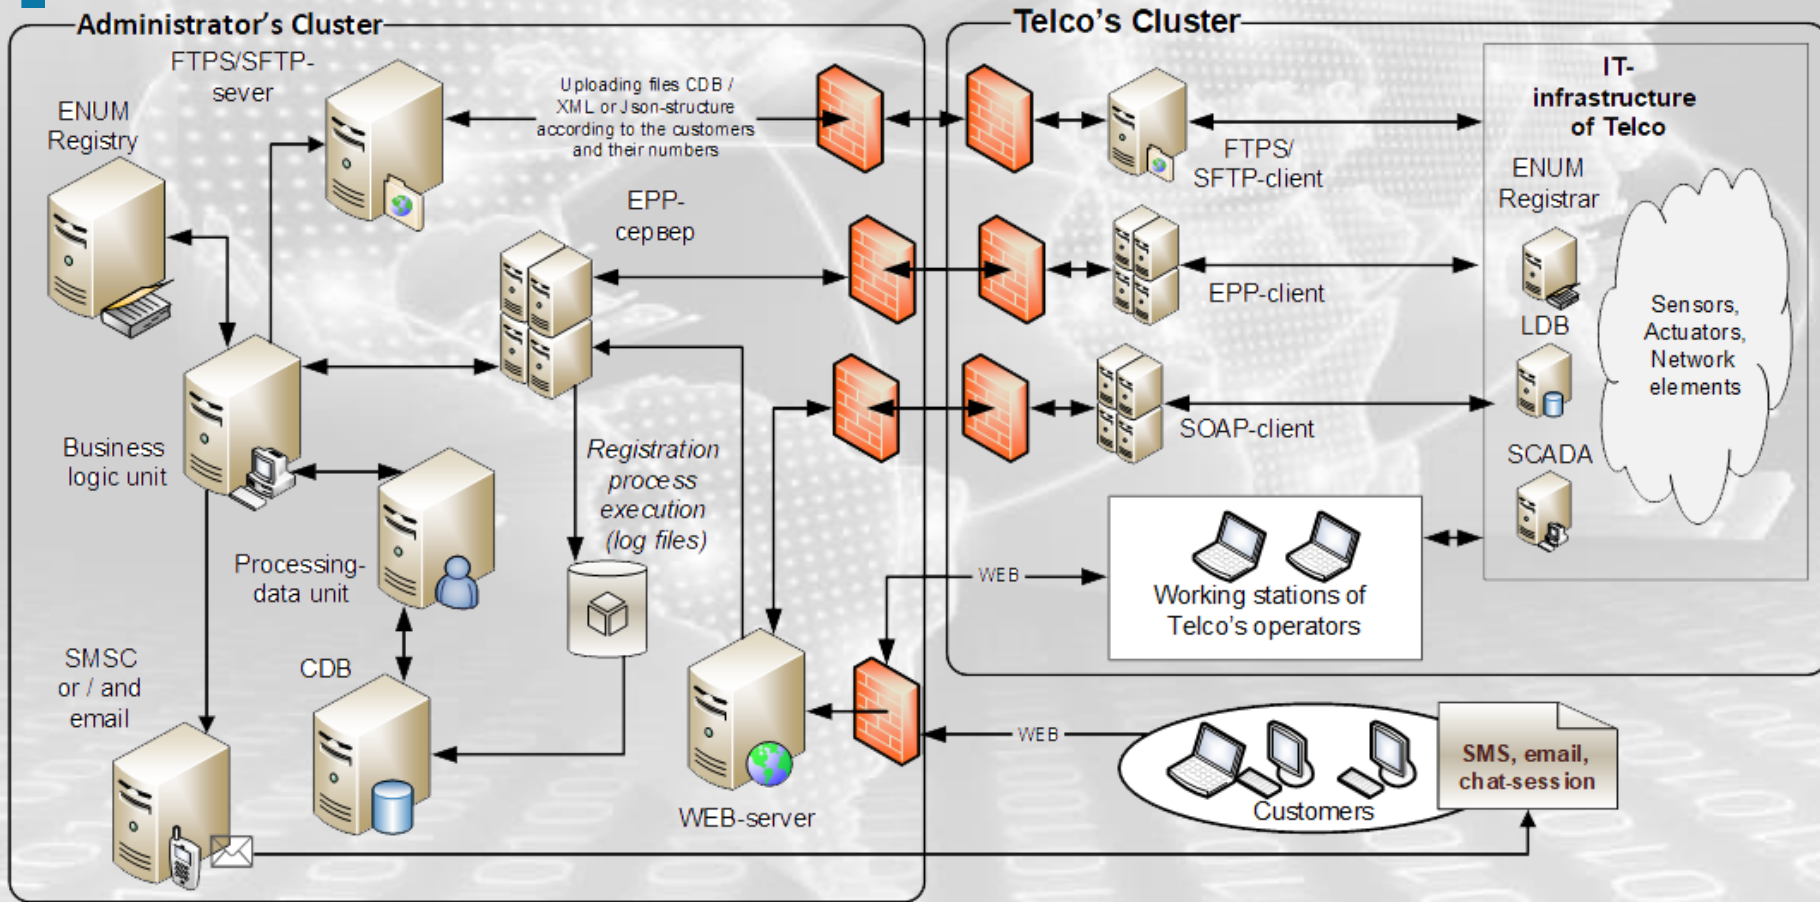

Place IdM in the general architecture

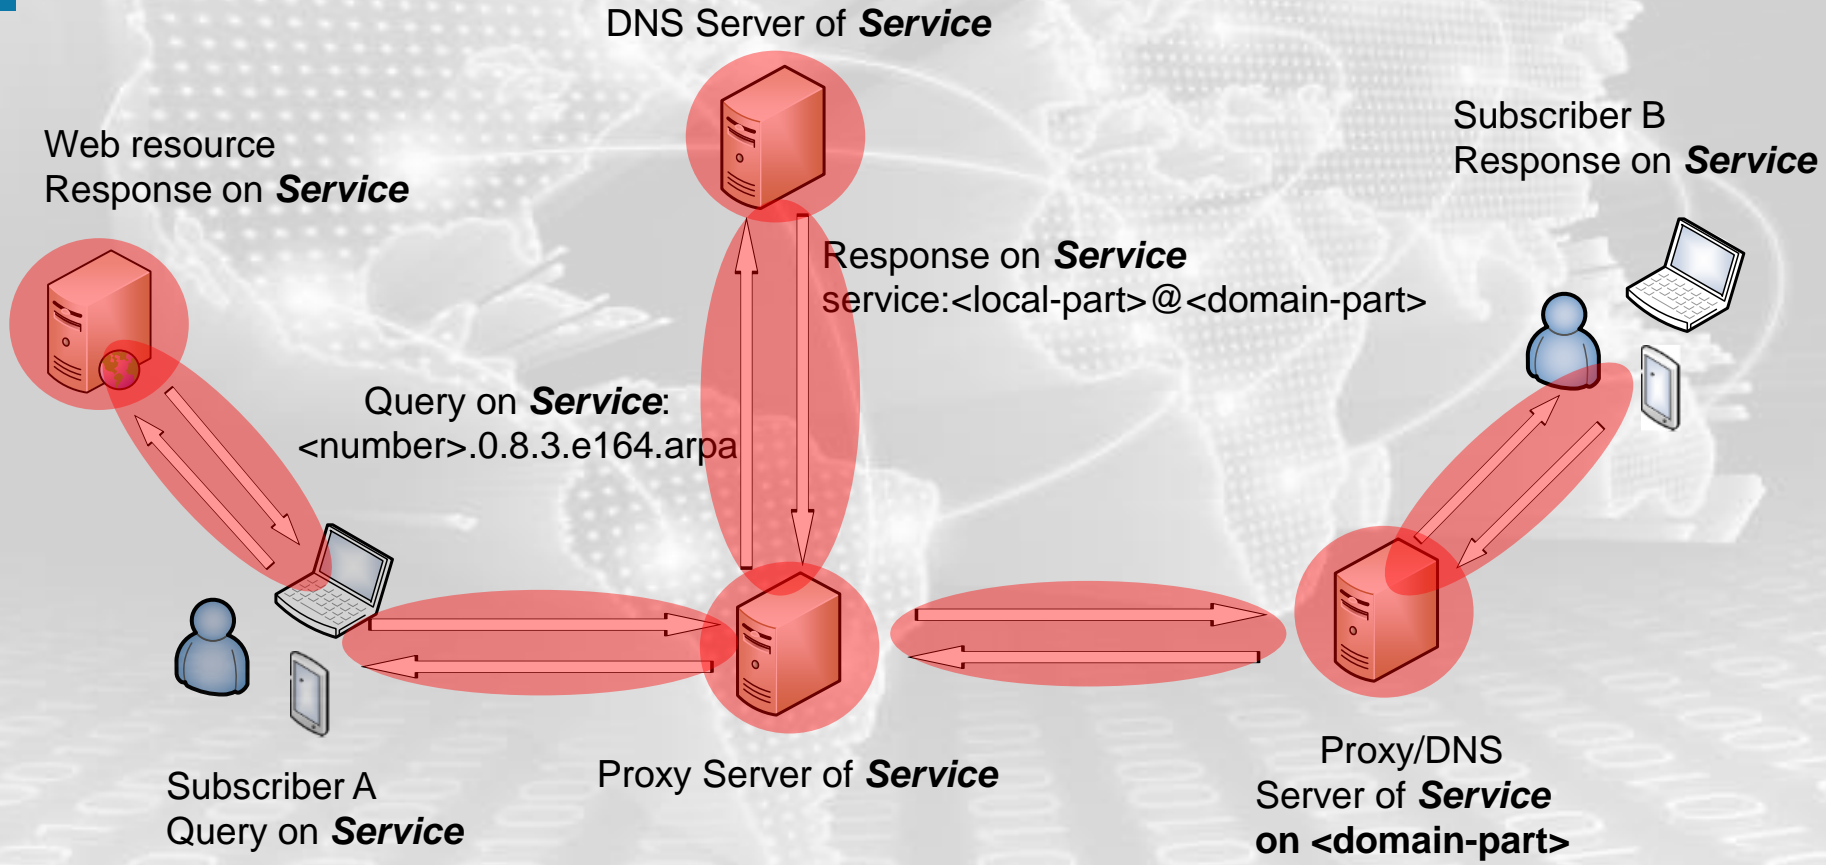

IoT reference model by Y.2060 (06/2012)

The proposed architecture of the IdM system

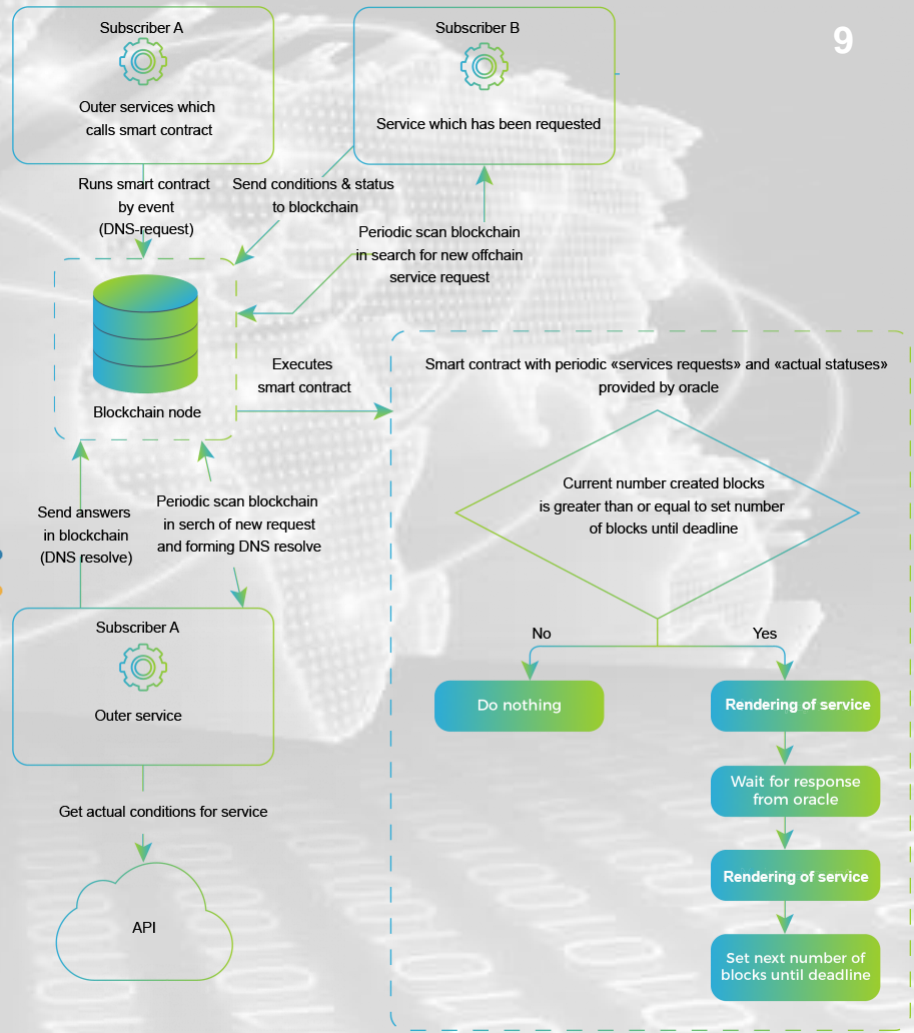

IdM/DNS and security

***Practical Case:
Security, Mobility, and Identity***

IdM/Blockchain+Security security

Effect of the convergence on the IoT properties and features

- ~~Full support USN applications and services~~
- Multistakeholders and multi-user ~~trusting environment within network structures~~
- ~~Easy~~ connectivity of any elements – sensors and actuators
- ~~Personalization of the Services~~
- Technologically ~~in~~dependent identification of digital objects and services
- Identifiers' ~~and Services'~~ Mobility
- Security
- ~~Scalability of the Network and Subject Solutions~~

**Thanks!
Questions?**
