

**Title: Cloud Services Architecture****Abstract**

In recent years, types of user devices and applications for cloud services have grown rapidly with little standardization. The users prefer services that are on-demand, scalable, survivable and secure with usage-based billing. In order to meet these demands, service providers need to be able to quickly create the services and utilize their resources effectively. Cloud Services are aimed to support these objectives.

In this talk, I will describe overall architectural framework for Cloud Services.
