

Connected Vehicle Solutions

December 2020

IOT Technology leveraging AI / ML + Computer Vision

Fully Integrated Tech Stack

Driving Road Safety and Significant Cost Efficiencies

Keyless Entry: Enables shared subscription marketplace by allowing remote access

Remote Engine Immobilization : Enables centralized control over inventory deterring theft

Predictive Maintenance: Battery/clutch/brake alerts triggering preventive maintenance and improving safety

Data and Machine Learning: Provides driver scores that help streamline operations and improve customer loyalty

GPS Tracking: Enables automation and frictionless customer communication

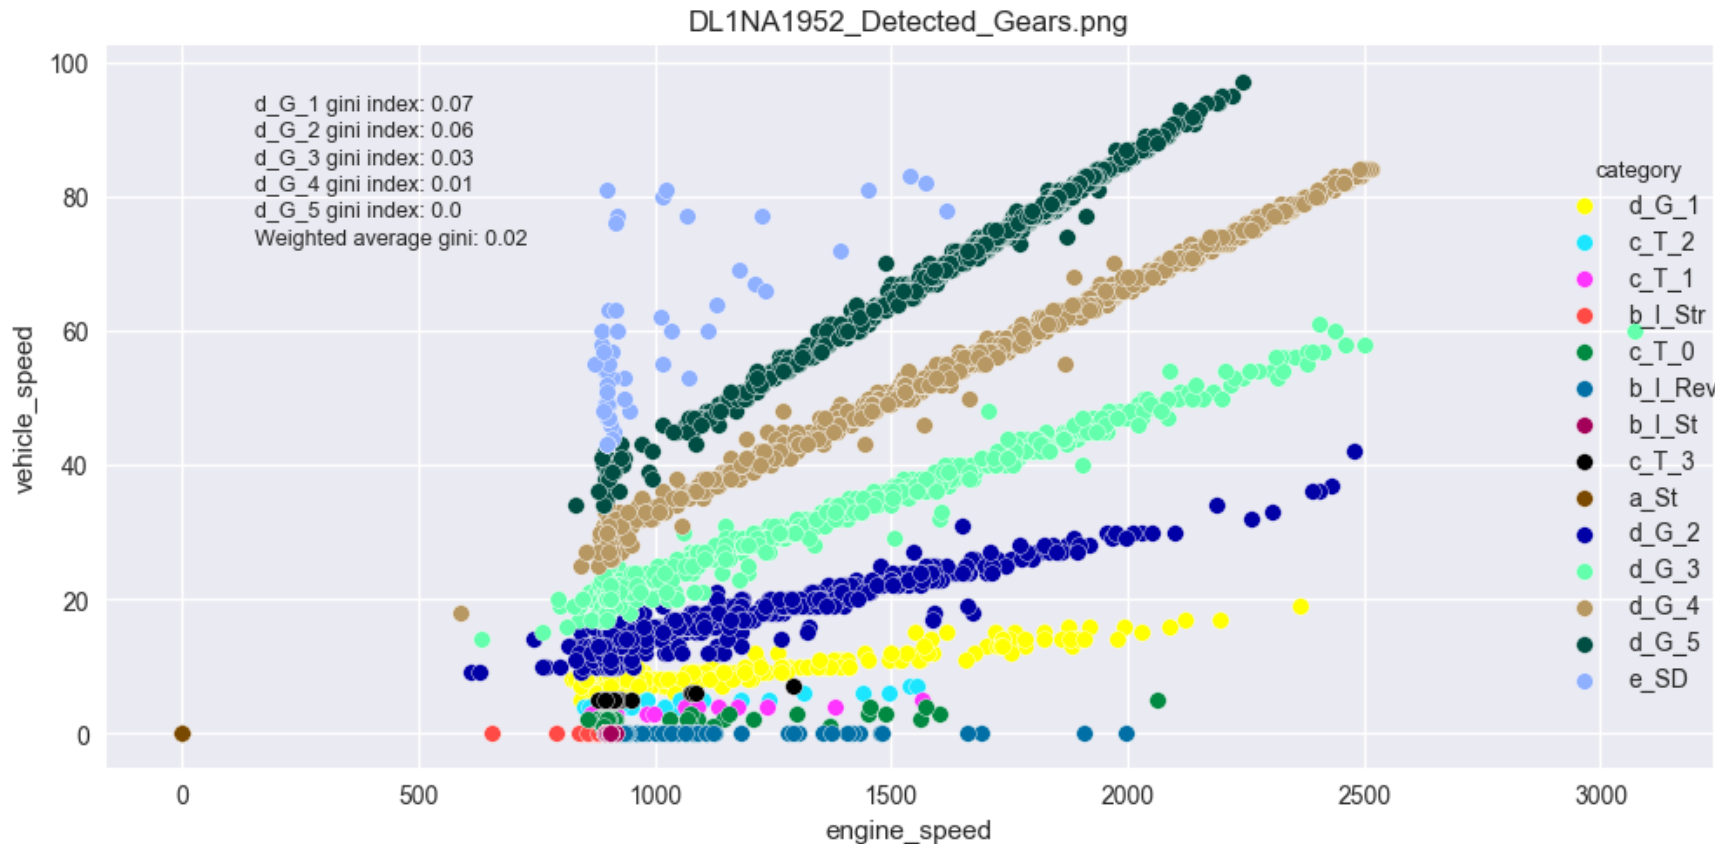

Geo-Zoning: Enables start/end trip for micro-mobility

Live Vehicle Health Data Streaming for Intelligent Monitoring

Taps OBD/CAN data through advanced diagnostics to avoid breakdowns and expensive vehicle downtime

Predictive Maintenance Algorithms Boost performance

- ✓ Sample of customer's clutch usage pattern vs. ideal usage pattern
- ✓ Key input for predictive clutch maintenance to avoid catastrophic failures

✓ Time Idling

- ☐ Alert to reduce time spent in standstill with engine on to optimize mileage

✓ Battery Drainage

- ☐ Trigger customer when battery is rapidly draining

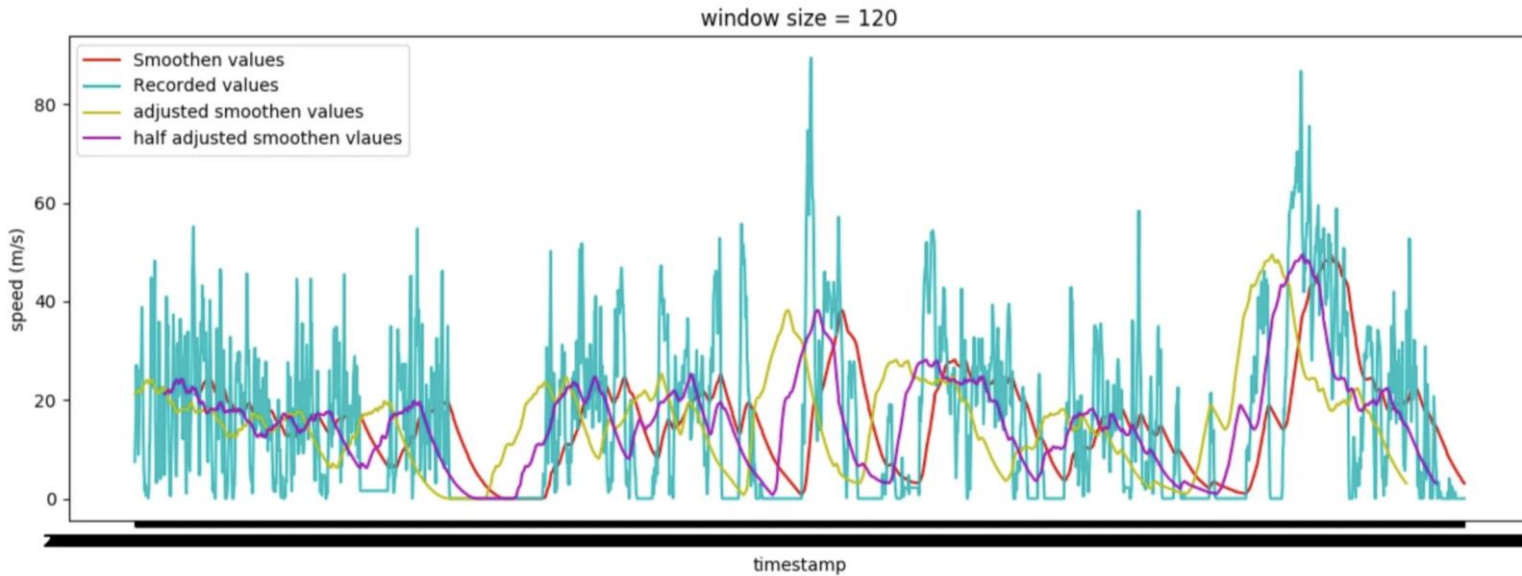

✓ Efficiency of Gear Usage

- ☐ Ratio of engine RPM to vehicle speed feeding into driver score

✓ Efficiency of Clutch Usage

- ☐ No of times clutch was used when not required

Driver Score Algorithm Creates Realtime Behaviour Assessment

How Smooth was the user's driving?

Harsh Braking

Harsh Acceleration

Over Speeding

Reward/ Penalize based on severity of Rash events

Time Idling

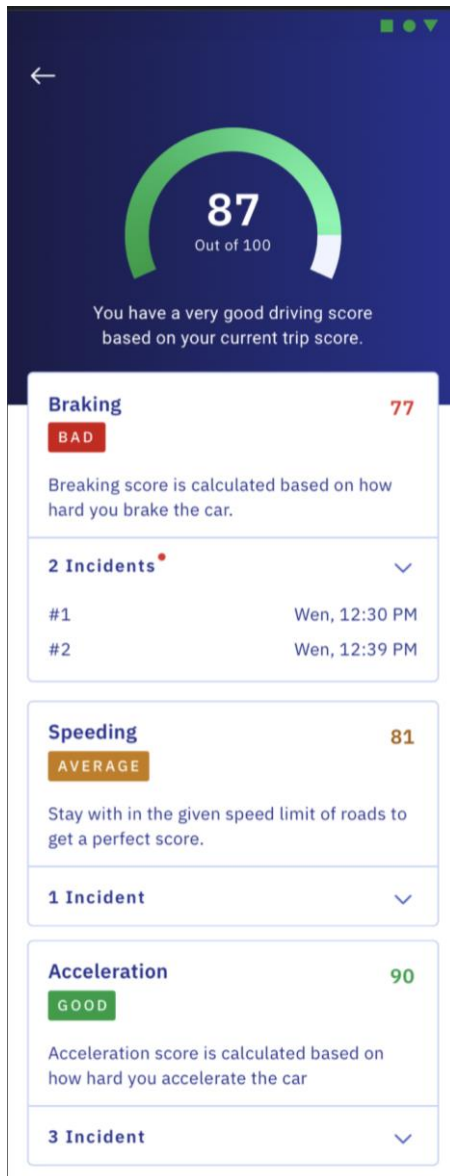

Battery Drainage

Gear Usage

Clutch Usage

Reward/ Penalize for severity Internal Usage

Live Driver Scoring Improves Driver Behaviour

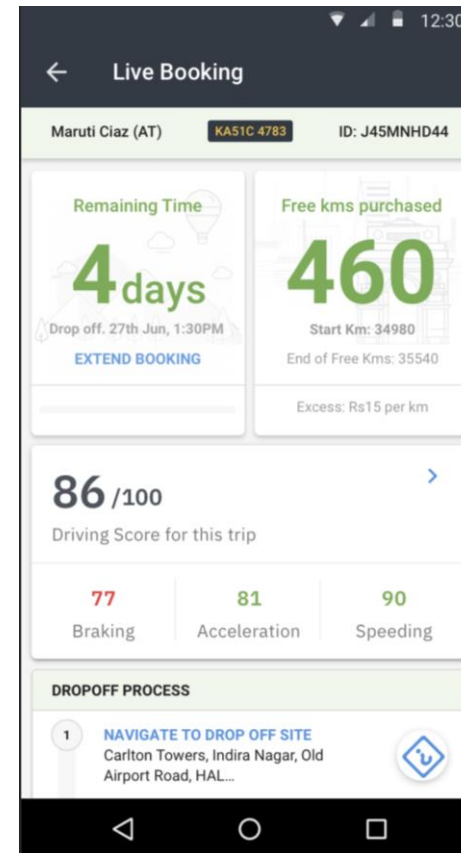

Score Gauge: 0-100

Braking Score and Incident details

Speeding Score and Incident details

Acceleration Score and Incident details including sharp turns

- **Driver Score is 100% vehicle type agnostic**
- Serves commercial + personal vehicles equally well
- Plugs in neatly to existing insurance ecosystems
- Reduces accidents 50% + and lowers operating costs 40% +

Computer Vision Provides Additional Layer of Driver Safety

Core Feature Capabilities

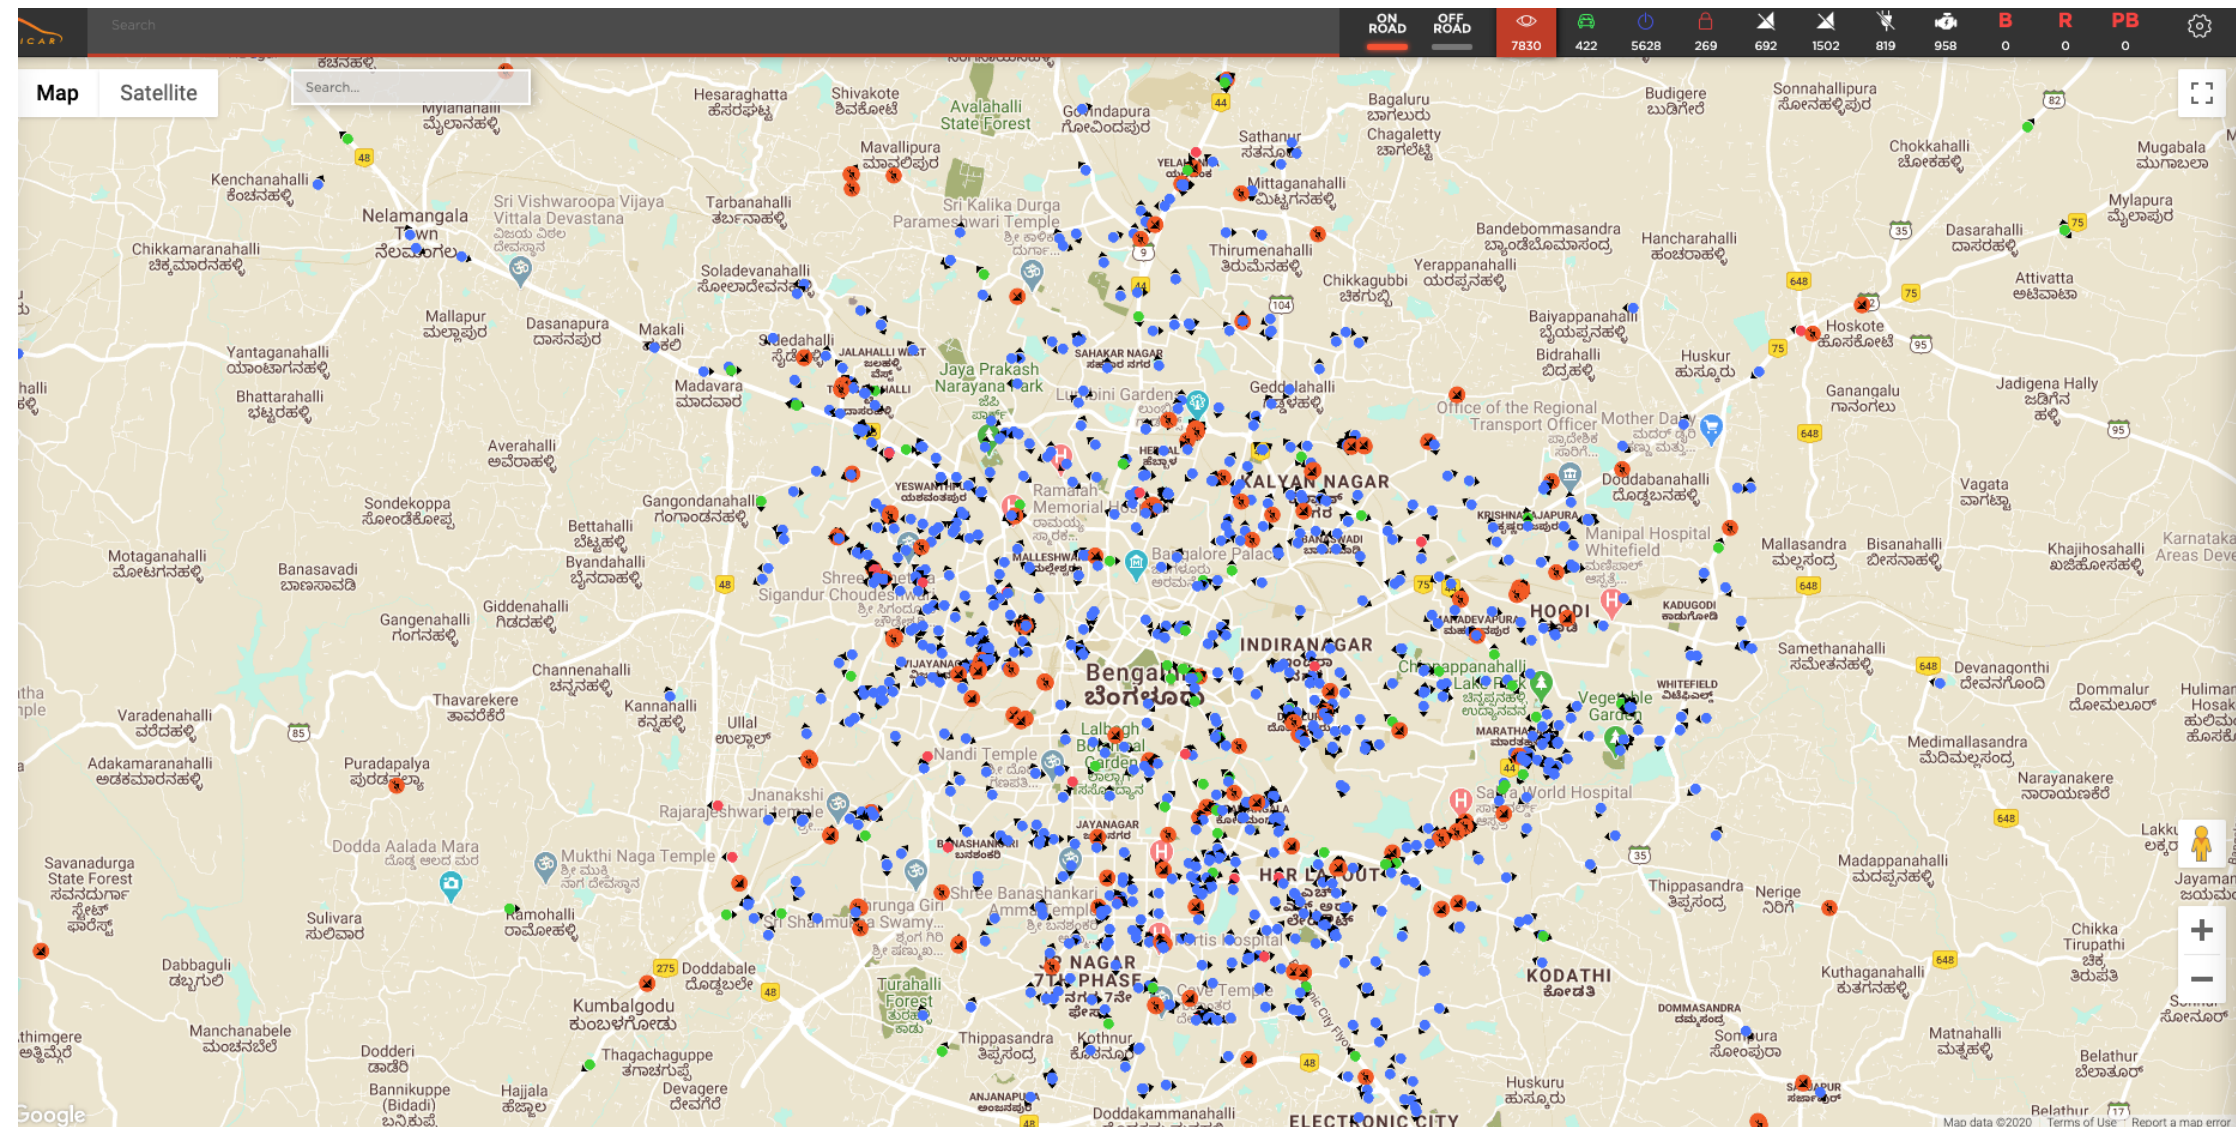

In-vehicle ADAS device processes road conditions in real-time and integrates back to driver score for 360 understanding

Vision Based Driver Assistance

83kph (Limit: 120kph)

Realtime Fleet Monitoring Promotes Safety and Efficiency

Dynamic mapping capabilities also allows for real-time insighting for operator to better manage fleet effectively

Centralized Control Center Provides Significant Operator Flexibility

Dashboard is fully customizable to suit the needs of operator and drive additional back-end efficiency

Map Satellite

Hosur Road, State Bank of India, Darga, Hosur, Dharmapuri district, Tamil Nadu

GPS Speed: 0: km/h

Dash Speed: 0: km/h

Vehicle Battery: 13.06: V
Device Battery: 4.02: V

Fuel : 46.8%, 28.1 Ltr

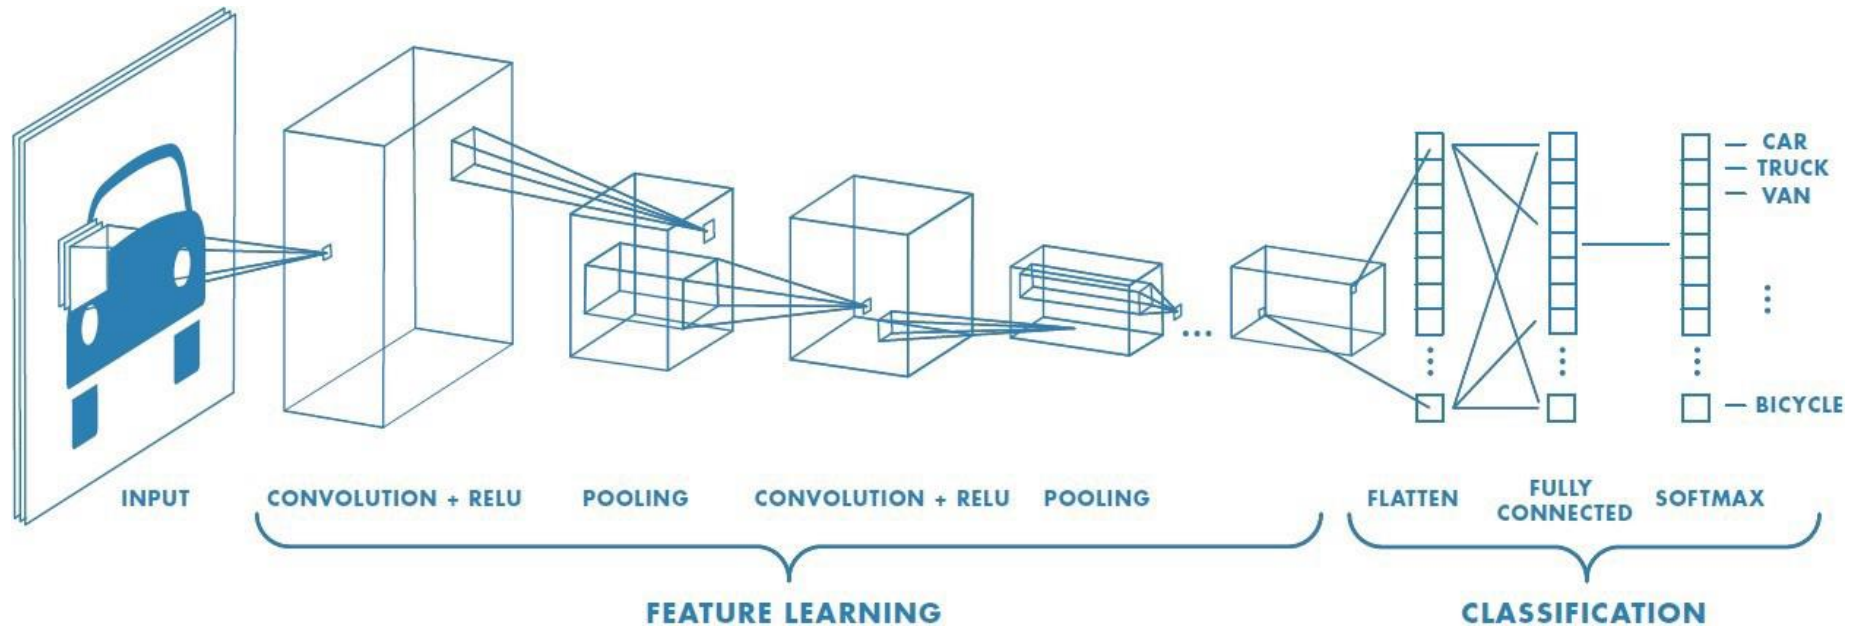

Engine Speed: 0: RPM

Engine Temp: 83: °C

26 Feb 2020 (Wed) | 09:09:32

Model	Scorpio S2	Ignition	On
Key	861693036915775	GPS	On
Start Fuel	31% (18.8 Ltrs)	Fuel Used	17 Ltr
End Fuel	26% (16.2 Ltrs)	Mileage	14.09 kmpl

Proprietary Neural Network Seamlessly Classifies Vehicle Damages

All the images from user checklist gets stored at cloud

Core Objectives

- Remotely identifying physical condition of a vehicle prior to ensure positive experience
- Making sure vehicle images captured are always of right orientation and quality for various use cases

AI/ML Damage Assessment Module Removes Manual Intervention

Damage Assessment Complete

Results:

Car validation check	✓
Damage validation check	✓
Location	Front
Severity	Severe

Damage Assessment Complete

Results:

Car validation check	✓
Damage validation check	✓
Location	Front
Severity	Minor

Damage assessment complete!

Stay Connected, Stay Intelligent Always!

Connected, Diversified & Intelligent Telematics Solutions - Comprehensive mobility services for varied partner needs

FOR WHOM ?

Fleet operators, owners of any vehicle type, vehicle sharing platforms, logistics companies

VEHICLE AGNOSTIC

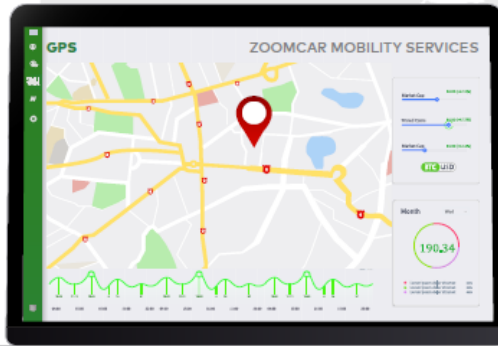

Fleet management capabilities for all form factors - 2W,3W, Cars, Trucks, Buses, Electric Vehicles

LEVERAGING THE POWER OF AI AND ML

With millions of data points collated over miles of driving experience.

Key Features

VEHICLE TRACKING, GEOFENCING & IMMOBILIZATION

Enhance visibility & gain control over assets remotely via live GPS tracking. Monitor vehicle movements within defined boundaries. Immobilize remotely and ensure better control over assets

PREDICTIVE MAINTENANCE

Access to real time vehicle health parameters, diagnostic checks and insights to reduce fleet downtime and maintenance costs up to 30%

DRIVER SCORING

unique driver score ratings ensures optimized driving and fuel cost savings up to 30%

OPERATIONS AUTOMATION

Schedule and automate routine operations and maintenance tasks for improved efficiency in fleet management

Key Features

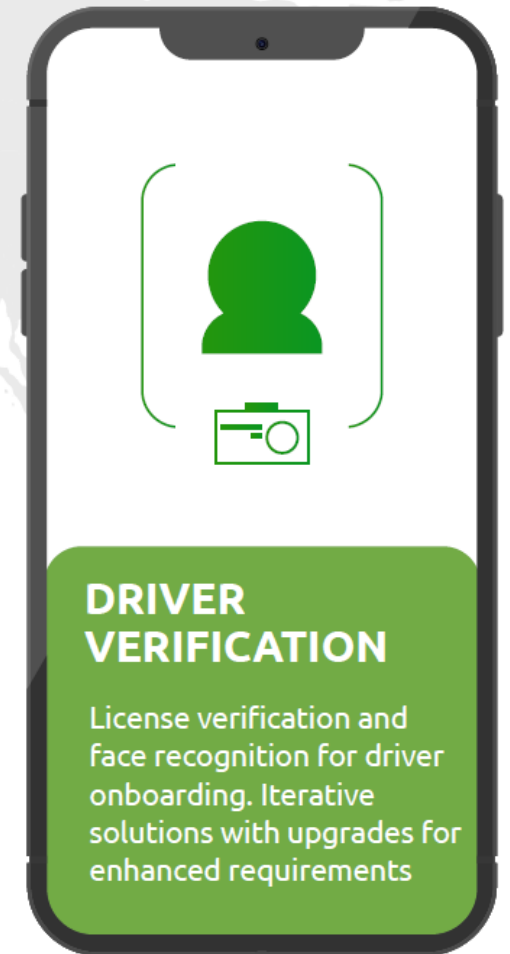

FLEET MANAGEMENT DASHBOARD

One-stop shop for fleet tracking & management with automated alerts and configurable reports. Control room with 360-degree view of fleet.

KEYLESS ENTRY

Access to an array of KLE based solutions for fleet sharing & advanced operations capabilities

DRIVER VERIFICATION

License verification and face recognition for driver onboarding. Iterative solutions with upgrades for enhanced requirements

ADVANCED DRIVER ASSISTANCE SYSTEMS (ADAS)

Accident Detection, A&V Recording and alerts powered by AI and ML to improve driving behaviour and avert serious accidents

FUEL LEVEL MONITORING

Realtime fuel level monitoring, refills, theft alerts and mileage analysis to reduce fuel pilgrage and losses
