

Progress on CCSA FTTR related standards

Qiang Cheng

2024-07-10

China Communication Standards association (CCSA)

- CCSA is a non-profit organization in China for carrying out standardization activities in the field of Information and Communications Technology (ICT) across China.
- CCSA has more than 700 members, including Telecom/Internet vendors, operators, institutes and universities.

CCSA Technical Committees

- TC1: Internet and applications
- TC3: Network and service capability
- TC4: Power supply and station working environment
- TC5: Wireless communication
- TC6: Transport and access network**
- TC7: Network management and operation
- TC8: Network & data security
- TC9: Electromagnetic Environment & Protection
- TC10: Internet of things
- TC11: Mobile internet application and terminal
- TC12: Aerospace communication
- TC13: Industrial Internet

WG1: Transport network

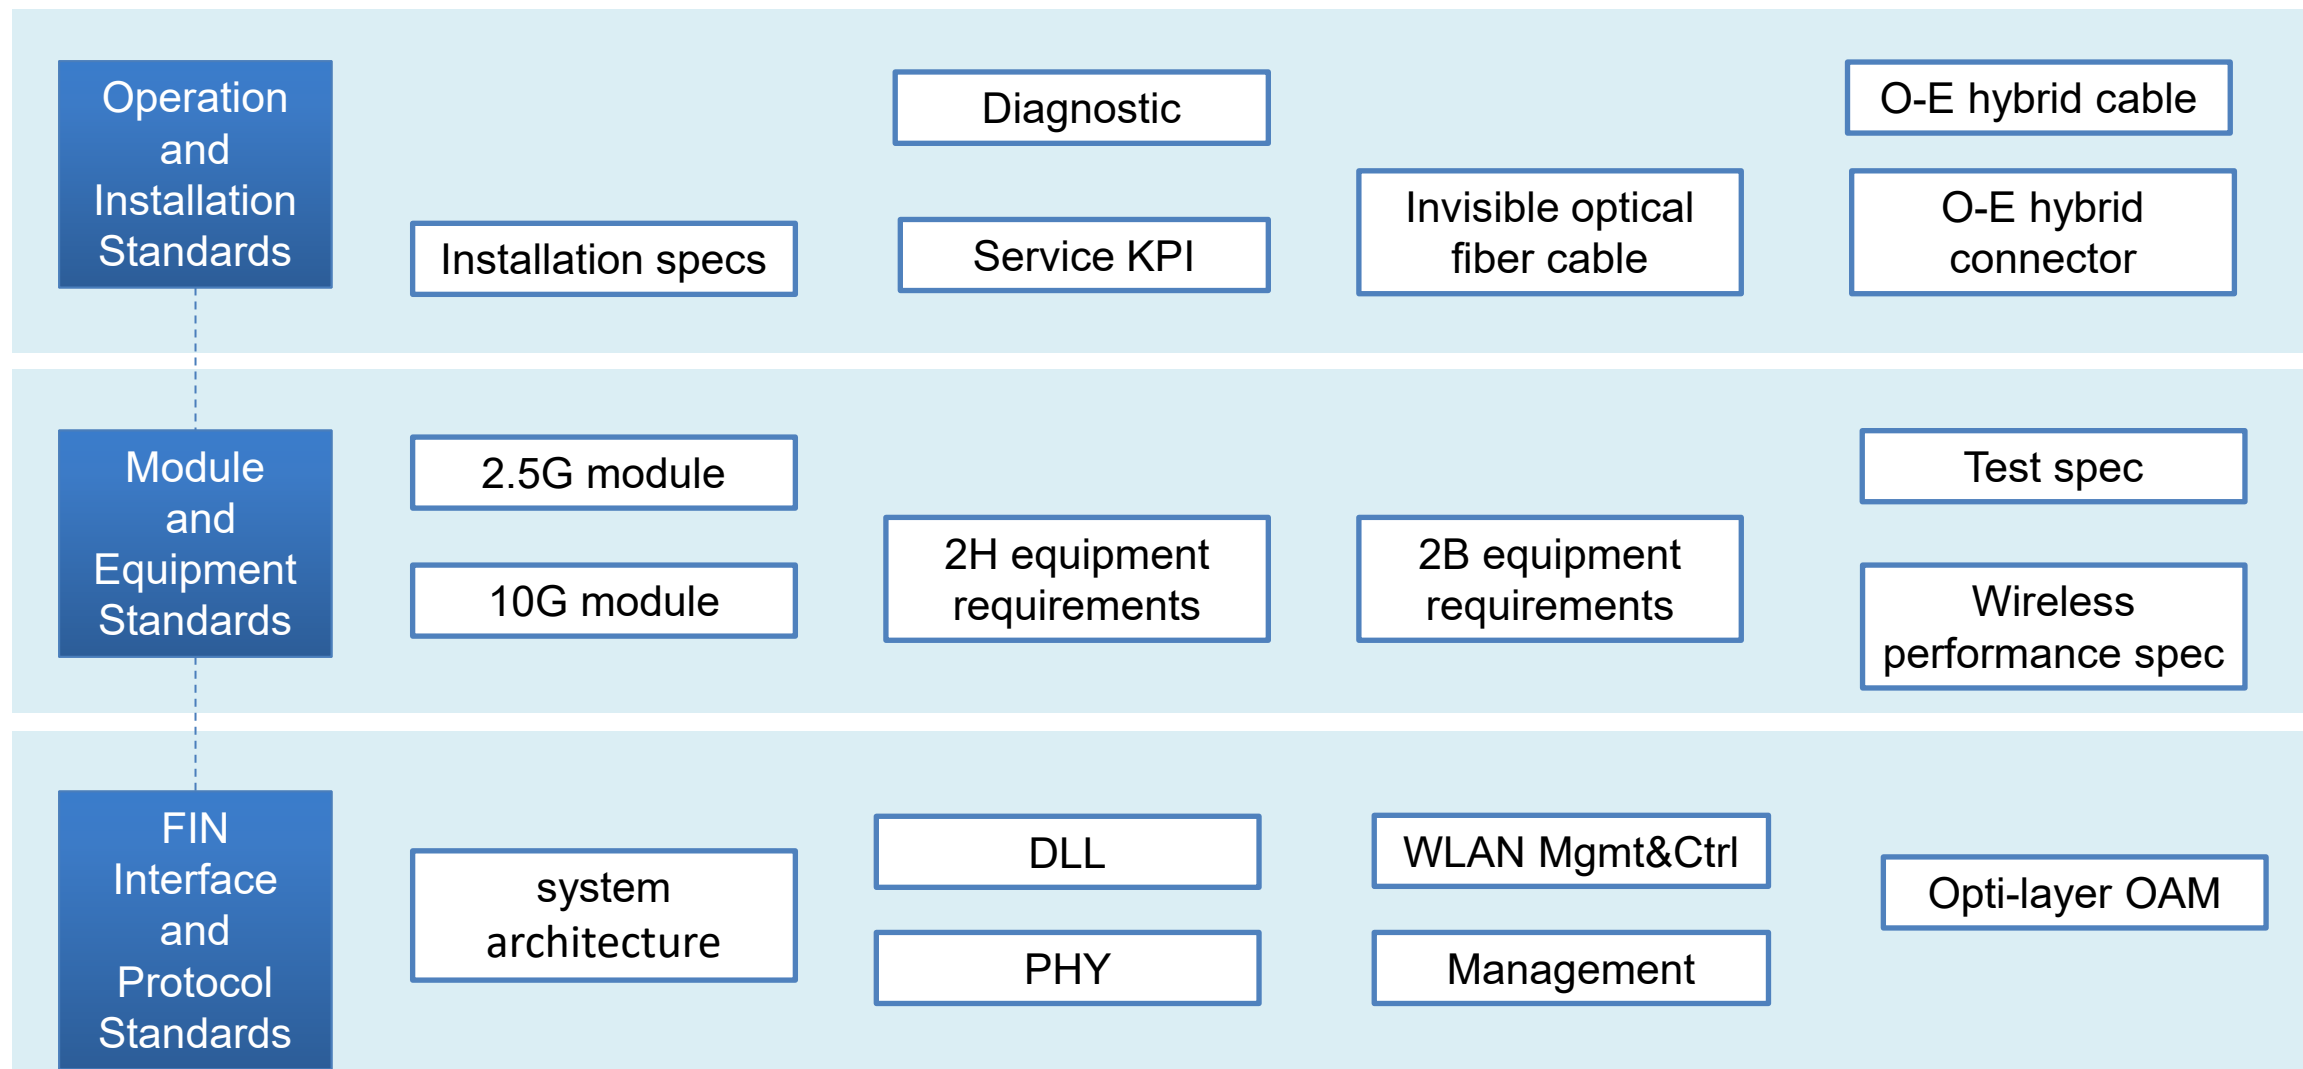

WG2: Access and home network

WG3: Optical fiber and cable

WG4: Optical devices

Standardization of FTTR system is in the scope of TC6

Overview of FTTR related standard layout in CCSA

CCSA FTTR standards - optical related

- For optical part, CCSA standards correspond to G.802.3 serial recommendations of ITU-T, and make expand for asymmetry rate.
- Dual rate (asymmetry and symmetry) co-existence is an important feature for M-FTR

Downstream	2.5Gbit/s		10Gbit/s	
Upstream	1.25Gbit/s	2.5Gbit/s	2.5Gbit/s	10Gbit/s
PHY- class Ra	Yes	Yes	FFS	FFS
PHY- class Rb	Yes	Yes	Yes	Yes
DLL	GEM based		XGEM based	

CCSA FTTR standard roadmap – optical related

Draft

Last call

CCSA FTTR standards - wireless related

- Wireless performance is a key index when evaluate the FTTR technology
- Four standards related in CCSA:
 - WMCI: define the WLAN management and control interface between MFU and SFUs. It's equivalent to G.wmci in Q3
 - Wi-Fi 6 gateway WLAN performance and test method. Already published
 - Wi-Fi 7 gateway WLAN performance and test method
 - FTTR network WLAN performance, including Multi-AP throughput and roaming handover time etc. This standard depends on the first three standards

CCSA FTTR specification roadmap – wireless related

Summary

- CCSA has made the whole layout of FTTR standards, covering technical requirements for interfaces, devices, modules, equipment, test methods and deployment.
- FTTR is a new and complicated system. Standards need some time to mature. Perhaps it will take several generations of evolving like xDSL or xPON
- But currently, the progress of FTTR standard seems fall behind the needs. It's good to finalize initial versions ASAP

Thanks
