

AI for Good Global Summit, May 2018: Conception of Focus Group on AI for Health

- Second AI for Good Global Summit: session on AI for health
- Need for partnership on AI for health, combining expertise in Health (WHO) and ICT (ITU)
- Idea for the Focus Group on AI for Health (FG-AI4H) is born
- ITU in corporation with WHO creates FG-AI4H in July 2018

Opening keynote by DG of WHO (Dr. Tedros)

What about AI for Health?

AI for Health

An ITU Focus Group
In collaboration with WHO

- Artificial Intelligence for Health (AI4H) offers substantial improvements for public and clinical health; e.g.,
 - early detection,
 - diagnosis,
 - risk identification,
 - treatment decision support,
 - self-management,
 - improved outcomes, ...
- How can we achieve world-wide scaling of AI for Health?

World-wide Scaling: App Repository

AI for Health
An ITU Focus Group
In collaboration with WHO

The screenshot displays the App Store interface with two main sections: 'Top Paid' and 'Top Free'. Each section lists 12 apps with their respective icons, names, categories, ratings, and prices. The 'Top Paid' section includes apps like 'WISO steuer: 2019', 'Magnet', 'Affinity Photo', 'Final Cut Pro Video', 'System Toolkit', 'Human Anatomy Atl...', 'DaisyDisk', 'iReal Pro', 'Affinity Designer', 'Logic Pro X', 'Notability', and 'iStatistica'. The 'Top Free' section includes apps like 'Pages', 'iMovie', 'Keynote', 'Numbers', 'GarageBand', 'WhatsApp Desktop', 'Microsoft Word', 'The Unarchiver', 'Microsoft Excel', 'Microsoft PowerPoint', 'AdBlock for Safari', and 'Open Any File'.

Rank	App Name	Category	Ratings	Price
1	WISO steuer: 2019	Finance	1052	24,99 €
2	Magnet	Productivity	6576	1,09 €
3	Affinity Photo	Photography	368	43,99 €
4	Final Cut Pro Video	Video	179	329,99 €
5	System Toolkit	Utilities	263	2,29 €
6	Human Anatomy Atl...	Medical	27	12,99 €
7	DaisyDisk	Utilities	58	10,99 €
8	iReal Pro	Music	15	21,99 €
9	Affinity Designer	Graphics & Design	253	43,99 €
10	Logic Pro X	Music	241	229,99 €
11	Notability	Productivity	67	10,99 €
12	iStatistica	Utilities	5	5,49 €

Rank	App Name	Category	Ratings	Price
1	Pages	Productivity	366	OPEN
2	iMovie	Video	455	UPDATE
3	Keynote	Productivity	153	GET
4	Numbers	Productivity	191	OPEN
5	GarageBand	Music	177	OPEN
6	WhatsApp Desktop	Social Networking	585	GET
7	Microsoft Word	Productivity	65	GET

An App Repository for digital health?

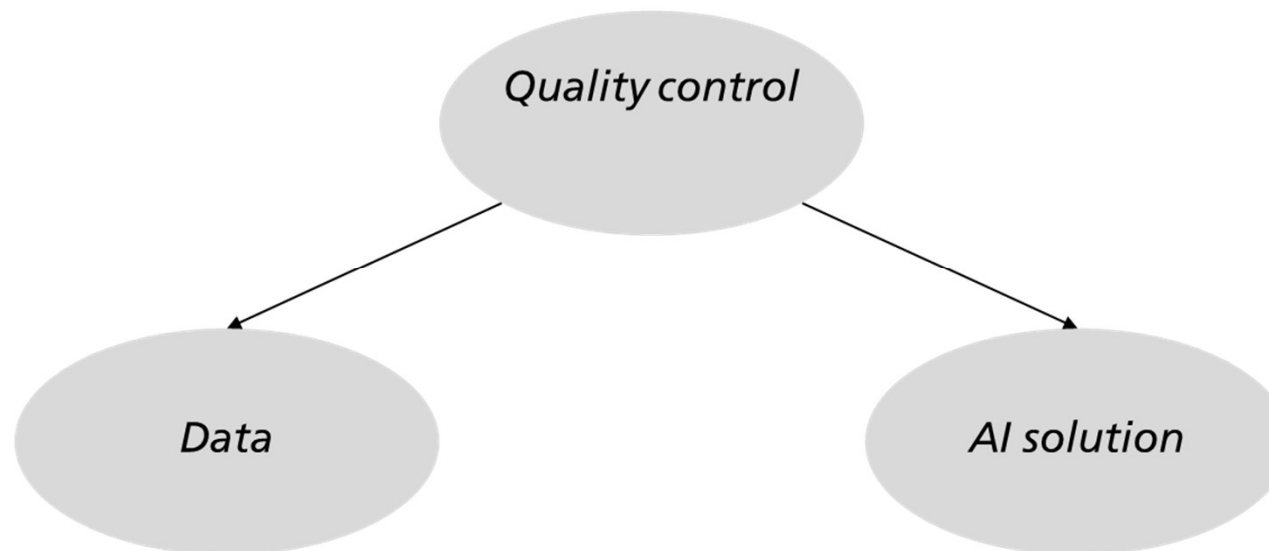

What needs to be done to make it work?

AI for Health Apps must be Quality Controlled

AI for Health
An ITU Focus Group
In collaboration with WHO

- For worldwide adoption, need evaluation standards
- AI heavily depends on the data used for training and testing
- Incorporation of domain (health/medicine) knowledge is essential

AI for Health Apps must be Quality Controlled

- For worldwide adoption, need evaluation standards
- AI heavily depends on the data used for training and testing
- Incorporation of domain (health/medicine) knowledge is essential

Quality control: Reference and training data

Considerations:

1. Collection of training data
2. Reproducibility of training data
3. Statistical properties of training data
4. Generation of reference data through experts
5. Evaluation of data for machine learning systems
6. ...

AI for Health
An ITU Focus Group
In collaboration with WHO

1. Collection of training data

- Availability:
Determined by the resources needed to collect data (time and finances)
- Bias:
Circumstances can cause certain sources of data to be used preferentially
- Incompatibility:
Determined by the comparability of data formats (interoperability, data classification system, precision of data classification, amplitudes, and ranges of values)
- Ethical and legal aspects of data collection:
Consideration of data protection, discrimination, etc.
- Test data must remain undisclosed
- ...

AI for Health

An ITU Focus Group
In collaboration with WHO

2. Reproducibility of training data

- Measurement process:
Data collection method (e.g., measurement or survey) must be reproducible
- Accompanying guidelines:
Guidelines can vary for the same data collection process (consider stationary vs unstationary sources of data)
- Independence and consistency:
Stationarity and ergodicity of the data to underlying processes
- ...

AI for Health

An ITU Focus Group
In collaboration with WHO

3. Statistical properties of training data

- Homogeneity:
Data sources should have a certain level of homogeneity (more or less equal cluster frequency in case of multiple clusters)
- Consideration of medical aspects:
Data must be collected for all necessary categories of a given medical problem
- Completeness:
Sufficient coverage for these categories (i.e., enough data points)
- ...

AI for Health

An ITU Focus Group
In collaboration with WHO

4. Generation of reference data through experts

- Annotation:
Clear guidelines for annotating outputs
- Classification:
Approach for handling different types of annotation
- Independence:
Flexibility to use different experts
- Active learning:
Iteration between annotations and AI algorithms
- Reference model:
Defining the "Gold Standard" as a reference ("Best in Class," "average performance")
- ...

5. Evaluation of data for machine learning systems

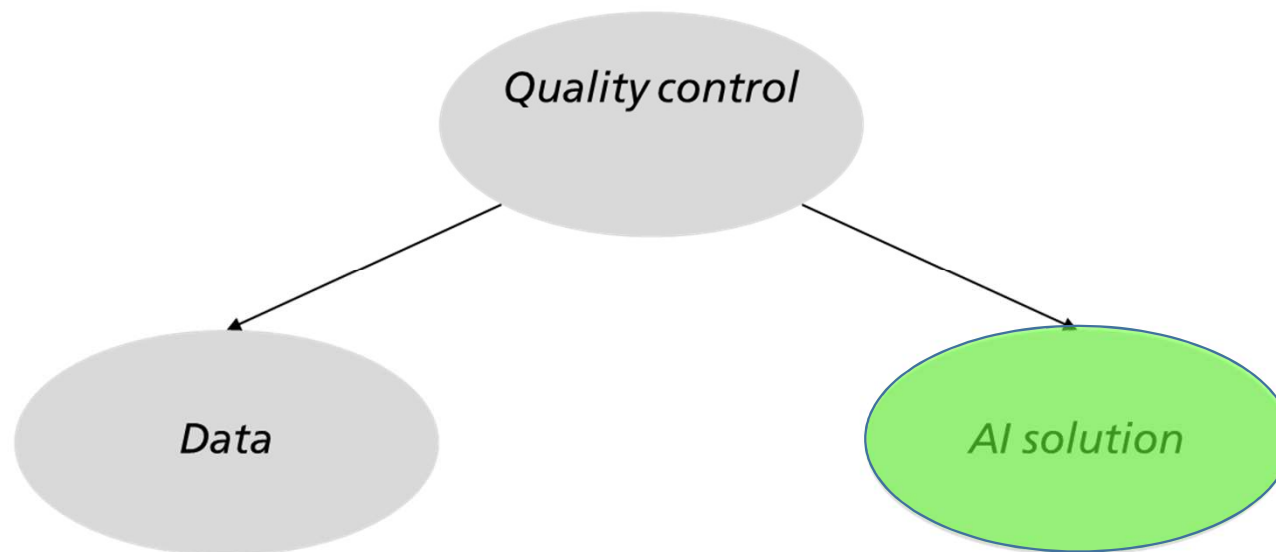

- Dynamics:
AI algorithm is evaluated for a given reference dataset and improved over time
- Incremental data collection:
Feedback is acquired through implementation of evaluated AI algorithm, experts provide evaluation, and reference dataset is enhanced
- Guidelines:
Guidelines for updating data come through experience and considering the properties relevant for machine learning
- Knowledge:
Distinguishing among "forgetting"/"learning from," "specialization," and "problematic bias" ...

AI for Health Apps must be Quality Controlled

AI for Health
An ITU Focus Group
In collaboration with WHO

- For worldwide adoption, need evaluation standards
- AI heavily depends on the data used for training and testing
- Incorporation of domain (health/medicine) knowledge is essential

AI for Health

An ITU Focus Group
In collaboration with WHO

Quality control: AI solution

Quality indicators:

1. Performance measurement
2. Robustness
3. Uncertainty
4. Explainability
5. Generalizability
6. ...

Benchmarking AI for Health

The Focus Group on AI for Health (FG-AI4H) is a partnership between the World Health Organization and the International Telecommunication Union, the United Nations specialized agencies for health and for ICTs respectively

AI for Health

An ITU Focus Group
In collaboration with WHO

1. Performance measurement

- **Metrics:**
Selection of measures and implied consequences (consider how a data output can impact practice); metrics can be discrete (y/n), Euclidian metrics, Hamming distance, distance for segmentation tasks, Pearson correlation, etc., but needs to be specific for the problem.
Multiple/combined metrics are conceivable.
- **Downstream consequences:**
Importance of metric accuracy for subsequent processes and risk of error propagation in the case of inaccuracy
- **Qualities of AI assessment:**
Ease of comparison, validity, classification, and reproducibility
- ...

AI for Health
An ITU Focus Group
In collaboration with WHO

2. Robustness

- Input data:
Influence of data quality issues (e.g., noise, manipulation, and errors)
- Expectations:
Can the AI algorithm complete a classification if the input signal has been disturbed (and experts are also able to make a classification)?
- Integration und guarantees:
Robustness in training and testing? What limitations must be made to the input signal?
- Evaluation:
How can robustness be tested?
- Unknown:
How to handle data that we know exists but on which the AI has not been trained? How to handle data that we do not know exist?
- ...

3. Uncertainty

- Measurement:
How do we measure the safety of an AI? How do we measure the safety of the output of an AI algorithm?
- Quantification:
How will experts assess the uncertainty of the reference data?
- Application:
How will users evaluate the uncertainty of the AI algorithm?
- ...

4. Explainability

- Identification:
What type of explanation is necessary? Should it provide plausibility/verification, information about origins, and improvement of models?
- Reproducibility:
Can the output of the AI algorithm be ascribed to an input signal?
- Explanation of relationships:
Can a causality vs correlation be explained?
- Impact of data:
Can patterns be detected in the input signal that explain the output of the AI algorithm?
- ...

5. Generalizability

- Nature of the data:
How can we test generalizability? What properties should the test set data have?
- Guarantees:
Can the AI algorithm be used for the next datapoint of a test set?
- ...

Our first proof-of-concept benchmark: Diagnostic Support for Breast Cancer

- Tumor infiltrating lymphocytes (TILs) are implicated in eliminating tumor cells
- Quantification of TILs relevant for patient prognosis estimation and therapy
- Replace “eye-balling” by pathologist with Machine Learning
- Focus Group: specify process on data generation and evaluate accuracy of Machine Learning method

0-10% stromal TILs

20-40% stromal TILs

50-90% stromal TILs

Article Info

Growing populations, demographic changes, and a shortage of health practitioners have placed pressures on the health-care sector. In parallel, increasing amounts of digital health data and information have become available. Artificial intelligence (AI) models that learn from these large datasets are in development and have the potential to assist with pattern recognition and classification problems in medicine—for example, early detection, diagnosis, and medical decision making.^{1, 2} These advances promise to improve health care for patients and provide much-needed support for medical practitioners.

Structure of FG-AI4H

Topic Group Group Operation

- A) Community: Creating and extending a community around a health topic
- B) Proposals: Solicitation of specific AI4H proposals
- C) Evaluation: Setting up evaluation criteria including reference data sets and metrics
- D) Report: Publishing reports about the evaluation and the results
- E) Dissemination: Deployment of AI for health solution in practice

Discussion of Process Steps

- The number of health topic communities will be very large
- Health topic discussions need to be moderated and chaired by impartial health/AI experts for fair and transparent process
- Monitoring and documenting by ITU or WHO official/staff
- Online-cooperation and virtual meetings
- Once an AI4H solution is deployed, data and results brought back and process repeated
- For AI4H solutions that learn/change during deployment, a specific benchmarking process should be developed
- The process (A-E) will also be evaluated every cycle for continuous improvement

Current Example Health Topic Groups

AI for Health
An ITU Focus Group
In collaboration with WHO

1. Cardiovascular disease risk prediction (TG-Cardio)
2. Dermatology (TG-Derma)
3. Falls among the elderly (TG-Falls)
4. Histopathology (TG-Histo)
5. Neuro-cognitive diseases (TG-Cogni)
6. Outbreak detection (TG-outbreaks)
7. Ophthalmology (TG-Ophthalmo)
8. Psychiatry (TG-Psy)
9. Raditherapy (TG-Radiotherapy)
10. Snakebite and snake identification (TG-Snake)
11. Symptom assessment (TG-Symptom)
12. Tuberculosis (TG-TB)
13. Volumetric chest computed tomography (TG-DiagnosticCT)

FG-AI4H

The ITU-T Focus Group on artificial intelligence for health (AI4H) was established by ITU-T Study Group 16 at its meeting in Ljubljana, Slovenia, 9-20 July 2018. The Focus Group will work in partnership with the World Health Organization (WHO) to establish a standardized assessment framework for the evaluation of AI-based methods for health, diagnosis, triage or treatment decisions. Participation in the FG-AI4H is free of charge and open to all.

The scope and general process of the focus group are described in a [commentary in The Lancet](#) and a [white paper](#). The documentation of all previous meetings can be found on the [collaboration site](#) (free ITU account needed).

- ▶ Please register [here](#) Registration is *separate* from the FG meeting itself)

[FG Meeting \(30 May - 1 June\)](#)

- ▶ Register [here](#) (see [instructions](#) for help)
- ▶ [Documents for this meeting](#)
- ▶ Submit written proposals by e-mail to tsbfgai4h@itu.int before the deadline (22 May 2019 @ 23:59 CEST). [Use this [template](#) - Please do NOT submit as PDF]
- ▶ Remote participation via [Zoom](#)

Is that it? No, not even close...

- What are the conditions of use for research health data?
 - Complicated, but solvable (UN-based servers, distributed locations, ...)
 - When health app is free of charge, then research health data usage conditions maybe free
 - When health app bears license fee > 0 , use of research health data should be charged
 - ...
- What are the conditions of use for the health apps?
 - WHO/ITU process via FG-AI4H provides a component for quality control
 - Further quality control steps depend on health topic and country
 - Complicated, but solvable (royalty-free or other licensing models, updates, ...)
 - ...
- Who will provide the input to the work of FG-AI4H?

World-wide Network for Collaborative Research on AI for Health

- FG-AI4H creates the “pipeline” to bring AI4H research towards global adoption
- Linking and coordinating research together with the pipeline
- Encouraging national programs to support AI4H work: data collection and annotation, algorithm design and testing, ...
- Discussions about funding have started

Source: <http://www.baurome.com/global-network>

Research and Evaluation Pipeline on AI for Health

Contributions by countries, NGOs, Universities, Research Institutes, Companies, Clinics, Civil Society, Foundations, ...

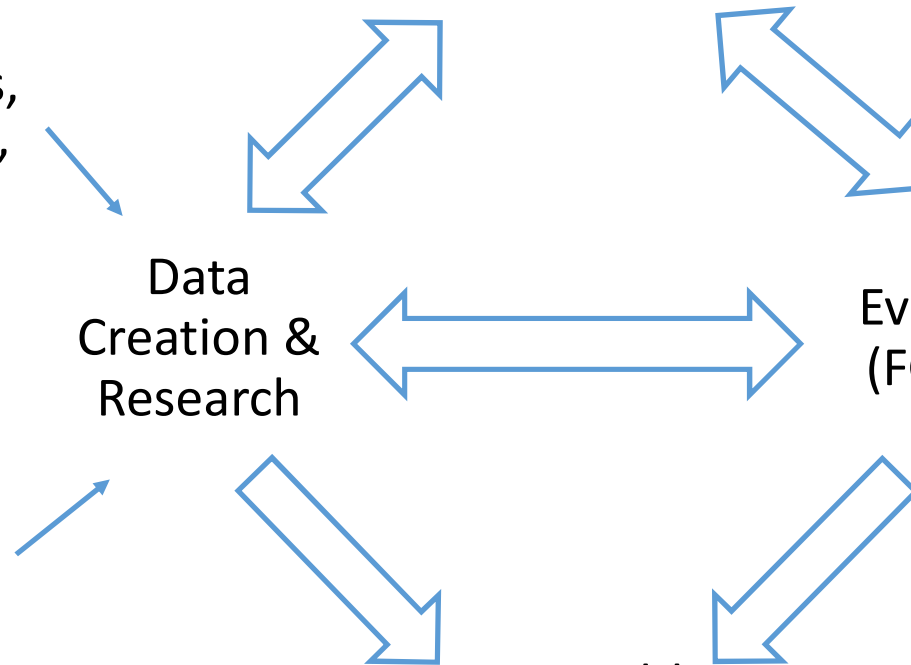

Coordination & Requirements

Data Creation & Research

Evaluation (FG-AI4H)

Contributions could be data, curation of data, AI solutions, infrastructure, funding, ...

AI4Health Solution
